

MiTek®

STRUCTURAL PRODUCTS CATALOG

62ND EDITION

INTEGRATED BUILDING SOLUTIONS

SERVICES

Scale your business and outputs (take-offs, estimating, job quotes, and more) with the comfort of fixed overhead costs.

AUTOMATED SOLUTIONS

Optimize your entire prefabrication facilities workflow with off-site solutions that enable better on-site building.

SOFTWARE

Enhance your operational performance with software solutions that connect the entire supply chain.

ENGINEERED SYSTEMS & PRODUCTS

Accelerate your building process with a full range of advanced solutions that save on labor and installation costs.

DEDICATED SERVICES

Expand your capabilities and address labor challenges

MiTek Services offers a dedicated staff model, supporting you consistently while fueling your growth. Our team provides a diverse set of services so you can focus on managing your business.

SCALABLE RESOURCE BENEFITS

- Extension of your existing team, dedicated exclusively to your business
- Follows your process and trained as your employee
- Proprietary information kept secure
- Reduces labor costs associated with benefits, HR expenses, and infrastructure
- Utilizes 100+ of the most popular and widely used design, CAD, BIM, and estimating packages

Services Available

- Estimating & Takeoffs
- Design Support & BIM
- Drafting
- Software Training
- And More

New Products

FWHL LIGHT-DUTY FIRE WALL HANGERS

14-gauge labor-saving solution for attaching I-Joists or dimension lumber to 2-hour fire rated walls in wood frame construction. Load tested without sheathing for complete installation before the drywall is attached. Skewed options up to 70°. See pages 188-189.

LSS SLOPE/SKEW HANGERS

Ideal for connecting rafters to ridge and hip beams in vaulted roof structures. This series is field adjustable to meet a variety of skew and/or slope applications. Slopes and skews 0° to 45°. This 18GA series fits between MiTek's current LS and LSSH series. The LS hanger slopes only and the LSSH hanger slopes and skews like the LSS, but the LSSH is heavy-duty. See page 170.

LSRR LIGHT-DUTY SLOPE RAFTER / RETROFIT HANGER

Sloped Hanger adjusts in the field for solid sawn rafters. It may be installed after the rafters are in place allowing flexible installation sequencing and retrofit options. Slopes up or down to 45°. See page 169.

PAF POST ANCHORS

Innovative one-piece design maintaining 1" stand-off between wood posts and concrete. See pages 78-79.

Discontinued Products

Discontinued MiTek Product	Discontinued MiTek Product Description	Recommended Replacement
Anchoring Epoxy		
CIA-GEL 7000-C	Epoxy	No replacement
CIA-EA	Epoxy Acrylate	
CIA-GEL 7000	Epoxy	
DUC	Ductile Undercut Anchors	
Fasteners		
TECO Nails	33° Collated Nails	No replacement
Angles & Straps		
LJQ (width 1-9/16" to 2-9/16")	Lateral Joist Connector	No replacement
Concrete & Masonry		
SFA8	Foundation Anchor	No replacement
Caps & Bases		
PA nominal sizes	Post Anchor (G90)	PAF-TZ (G-185)
PAE nominal sizes	Post Anchor (G90)	PAF-TZ (G-185)
WE46R	Wet Post Anchor, Rough Sawn	No replacement
PBES	Post Cap (G90)	PBES-TZ (G-185)
PB	Post Cap (G90)	PB-TZ (G-185)

MiTek's product line continues to evolve along with ongoing research and trends that continue to move our industry forward. To keep you informed of ongoing product line changes the table to the left identifies the best substitute for each discontinued product where appropriate. Products identified with a recommended replacement is a better fit to current market demand. Other products have been replaced by new technology, eliminating the need in the marketplace.

WARRANTY

MiTek USA, Inc. ("MiTek") warrants its MiTek catalog Products to be free from material defects in manufacture and design, and further warrants that they will perform within the design limitations of its published building code approvals for the applications described, when properly installed and maintained. These warranties do not cover Product deterioration due to environmental conditions, Products that have been modified or damaged, improperly installed or used outside of published design limitations or for other applications. In the event any Product is shown to not conform to these warranties, MiTek's sole obligation, and Customer's sole and exclusive remedy, shall be, at MiTek's option, to replace the non-conforming product or refund the full purchase price paid by Customer to MiTek therefor. MITEK MAKES NO OTHER PRODUCT WARRANTIES,

EXPRESS OR IMPLIED, OF ANY KIND, AND PARTICULARLY EXCLUDES ANY IMPLIED WARRANTY OR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL MITEK BE LIABLE FOR INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES, REGARDLESS OF THE LEGAL THEORY OF RECOVERY, EVEN IF IT WAS AWARE OF THE POSSIBILITY OF SUCH DAMAGES. IN ANY CASE, MITEK'S MAXIMUM LIABILITY SHALL NOT EXCEED THE PURCHASE PRICE PAID BY CUSTOMER FOR THE NON-CONFORMING PRODUCT. Some states restrict consequential or other liability damage limitations, so some of the above limitations may not apply to you. MiTek reserves the right to change this warranty periodically. Consult MiTek's website MiTek-US.com or contact MiTek for a current warranty statement.

Reference Number Index

About the Reference Numbers

Reference numbers shown throughout the tables in this catalog are part numbers which may be more familiar to customers in various regions of the United States. These are included for the convenience of our new customers who have recently switched from a competitor's product line to MiTek.

The reference numbers in this catalog are for general application comparison only and should not be used as a substitution tool. The user is responsible to compare specific load values, fastener schedules, material specifications, and other factors to determine suitability of use for any particular product.

THIS IS A REQUIREMENT ONLY FOR THE STATE OF CALIFORNIA

Based on our experience, we do not believe that our products when used as intended present an exposure risk of ingestion, inhalation or by absorption through the skin to any of Prop 65's current list of chemicals. Nonetheless, out of an abundance of caution, and in the event our MiTek products are misused or used in ways we do not foresee, we are taking the precaution of placing a short-form Prop 65 warning on the labels of our retail packaged products, and in some instances, on signs posted in the California retail locations where our products are sold to consumers without labels.

MiTek manufactures and supplies some products that are not intended as consumer products, and are sold through professional construction supply channels and/or delivered directly to job sites. These products will not carry the Prop 65 warning. To learn more about the California Proposition 65, visit www.P65Warning.ca.gov. For MiTek specific questions please contact MiTek Customer Service at 800-328-5934 with any questions or visit our website, MiTek-US.com.

Code Evaluation Information

Code Reference Column Table Listing

Most structural products shown in this catalog are listed in a current code evaluation report from the code evaluation agencies listed.

The load values shown in this catalog were current at the time of printing but we are continually improving our products through better engineering design and development so some of the evaluation reports may have been updated with better load values after the catalog was printed.

In a few cases, we have submitted a formal independent test report from an approved lab to the code evaluation agency and are awaiting on an evaluation report.

We recommend visiting our web site: **MiTek-US.com** or, the specified code evaluation agency's web site, shown below, to obtain the latest load values from the most current evaluation report.

ICC-ES (ESR): icc-es.org

IAPMO UES (ER): iapmoes.org

Florida (Florida Product Approval No.): floridabuilding.org

City of Los Angeles, California: products have a supplement on their ICC-ES or IAPMO UES evaluation report, see icc-es.org or iapmoes.org as applicable

Some code jurisdictions may require additional load reductions and/or use limitations for some products listed in this catalog. In those cases, the products may not be approved or may need further review for approval.

We recommend contacting the code jurisdiction having authority for your project to confirm they accept the evaluation reports, or contact our Engineering Department for further assistance.

Code Reference Table

Code Reference	Code Evaluation Agency	Building Code Coverage
IBC	ICC-ES IAPMO UES	International Building Code (IBC) International Residential Code (IRC)
FL	State of Florida Product Approvals	Florida Building Code (FBC)
LA	LA City - City of Los Angeles, California	Los Angeles Building Code (LABC) Los Angeles Residential Code (LARC)
PC	Prescriptive Code	Satisfies prescriptive construction requirements: no code evaluation report necessary
--	None	No Code Listing

Code Evaluation Labeling Requirements:

Labeling products for field identification is part of our quality assurance program. Code evaluation agencies require that the label include the manufacturer's name or trademark, the model number, and code evaluation identification number. In addition, there must also be a number to trace the product back to the steel used in manufacturing.

The primary intent of this labeling is to allow confirmation that the connector being examined at on the jobsite is code approved. This can be verified by checking that code evaluation identification number on the code evaluation agencies website or MiTek-US.com.

Product Identification and Labeling

Labels are positioned on products so they can be seen after installation

Typical Product Label

Each MiTek connector is identified with the following information:

- 1 **Product Brand:** MiTek®
- 2 **MiTek Stock Number:** Shows stock number as it appears in MiTek's literature and code evaluation reports.
- 3 **Reference Number:** Product number of a competitor that may be specified.
- 4 **Code Evaluation Identification Number:** The code evaluation identification number(s) are listed here. ESR-2685 is a general index report from ICC Evaluation Service, Inc. (ICC-ES) and provides a convenient cross-reference to many of our ESR reports.
- 5 **Work Order Number:** For structural product traceability.
- 6 **Corrosion Information:** Shows the corrosion resistant finish of the product.
- 7 **UPC Code**

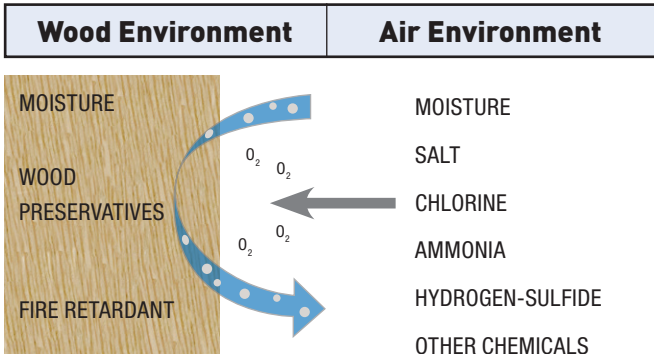

Color Coding: Black print indicates standard G90 finish. Green print indicates corrosion resistant finish.

Corrosion Information

For the majority of applications, metal hangers and connectors are used in interior, above ground, dry service conditions. They are typically not being exposed to corrosive environments which can significantly reduce their strength and longevity.

What is Corrosion?

Corrosion is the destructive degradation of steel due to its interaction with the environment. Here the steel is the connector and the environment is whatever the connector interacts with, namely wood and air. Each environment may contain one or more corrodents (substances that cause corrosion) acting independently or in combination to degrade the strength of the connectors.

Electrochemical oxidation is the most common type of corrosion affecting metal connectors. It is a process in which iron (Fe) reacts with oxygen (O₂) in the presence of an electrolyte such as water (H₂O) to form iron oxide (Fe₂O₃), a brown and flaky by-product commonly known as rust.

Steel is an iron-based metal alloy which is susceptible to this type of corrosion, even when exposed to normal atmospheric air, since air contains oxygen and water as part of its normal composition. While steel is very strong, rust is not. Over time, the continuous formation of rust eats away the base metal and reduces the strength of the connector. The rate of oxidation generally increases with increasing moisture content, the presence of salt, or when galvanic corrosion is a contributing factor.

Galvanic Series (Abbreviated)	
More Active (Anodic-)	
↑	Zinc
	Aluminum
	Steel
	Brass
	Copper Nickel
	Stainless Steel - Type 304
	Stainless Steel - Type 316
More Passive (Cathodic +)	

Galvanic corrosion occurs when there is an interaction between dissimilar metals that are in contact with one another. The degree of corrosion depends on where the metals reside in the galvanic series, which is a compilation of known metals and their relative reactivity. The more active metal (anode) will corrode preferentially while shielding the more

passive metal (cathode) from further degradation. For example, with galvanized steel, zinc is used as a coating on the steel because it sacrificially corrodes to protect the steel substrate underneath. The coupling between zinc and steel is said to have a lower galvanic potential than the coupling between zinc and stainless steel because zinc and steel are closer to each other in the galvanic series. In general, the coupling with a lower galvanic potential would result in a slower corrosion rate.

Corrosion Protection Options

Zinc Galvanizing:

Most connectors are manufactured from pre-galvanized sheet steel or coiled steel, which is typically made by the hot-dip process in accordance with ASTM A653 and ASTM A924 standards. Fasteners are galvanized in accordance with ASTM A153. In the manufacturing of the connectors, the punching and shearing processes create exposed bare metal surfaces. Thankfully, zinc has an incredible ability to 'heal' itself; the zinc around the exposed metal corrodes and deposits a layer of zinc corrosion by-product called zinc patina (white powdery appearance) over the exposed metal to further protect it.

By being more reactive than steel, zinc sacrificially corrodes at a steady rate over time to shield the steel from the effect of corrosion. The protection ability of zinc is proportional to its thickness, which is proportional to the amount of zinc applied. Zinc coating is specified as the total weight on both sides of the sheet steel, measured in ounces per square foot (oz/ft²). For example, G90 means that there are 0.90 oz/ft²; G185 has 1.85 oz/ft² and would last about two times longer than G90. G90 is the minimum protection for connectors and is standard in MiTek connectors.

Design Guidelines:

Where there are governing national or local building code requirements, they should be used in the selection of the connectors and their protection against corrosion. In the absence of such requirements, the decision rests on the experience and judgment of the building designer/engineer. Design guidelines are presented in this section to aid the building designer/engineer in this selection process, but it is the responsibility of the building designer/engineer to determine the most viable solution based on an evaluation of the connectors to the specific corrosive environment(s). The guidelines consist of best practices, recommended protection levels for the connectors, and strength modification factors for the lumber/connectors.

Where there are multiple options suggested, do not automatically default to the lowest protection level. The lower protection level is intended to address less severe conditions while the higher protection level is meant to address more severe conditions. Select the option that eliminates or adequately reduces the vulnerability of the connectors to the corrodents. When in doubt, use a higher level of protection than anticipated or seek professional consultation.

Corrosion Information

Relative Corrosion Resistance Capability:

The table below ranks the available options in terms of their relative effectiveness against corrosion. As expected, the ability to resist corrosion increases with increasing zinc thickness, so G185 is the most durable pre-galvanized product available. Gold Coat offers enhanced protection compared to G185 while stainless steel offers the best protection for most applications.

Galvanic Corrosion:

The simplest and most practical solution to minimize galvanic corrosion is to make sure that the components that are in direct contact with each other are made of the same material or coating. Once this is achieved, there is no net galvanic potential between the components and galvanic corrosion is eliminated or significantly reduced. For example, use galvanized nails for galvanized connectors and stainless steel nails for stainless steel connectors.

Wet Service Condition:

For lumber, this refers to any service condition in which the average equilibrium moisture content is 15% or more over a year or may exceed 19% at any time. For lumber to get above 19% moisture, the relative humidity in the air needs to reach above 80%. Unfortunately, this is above the critical humidity level for the electrochemical oxidation of steel, which is around 70%. Beyond 70%, the rate of corrosion in the connectors increases rapidly due to the abundant availability of moisture.

G90 may not be suitable for use in wet service condition.

Preservative (Pressure) Treated Wood:

There are many preservative wood treatment formulations available on the market today. The element that is common to most of them is the presence of copper in the formulation which can contribute to the corrosion of steel connectors and fasteners.

Of the copper based preservatives, the two types are micronized copper and soluble copper. Micronized copper formulations MCA (micronized copper azole) and MCQ (micronized copper quat) are sold under different brand names and are the most predominant formulation in today's preservative treated wood industry. Soluble copper formulations CA (copper azole) and ACQ (alkaline copper quat) have also been very popular since they replaced CCA (chromated copper arsenate) which was phased out in 2004. Some "metal free" preservatives are still used for above ground and sill plate applications, but are not as common. One of the main criterion affecting the selection of one preservative treatment over another is the type of wood being treated and how well it can be penetrated by the treatment.

While many of the advanced wood treatment formulations containing copper used today have proven to be less corrosive to steel, especially micronized copper, MiTek recommends a higher level of corrosion protection for connectors in contact with copper based wood treatments.

Connectors and fasteners in contact with metal free wood preservatives do not require additional corrosion protection due to the preservative itself, however all factors that can create the corrosive environment should be considered when selecting the appropriate finish. If unsure as to whether a particular treatment is corrosive to steel fasteners, check with the supplier of the preservative treated wood product for their recommendation.

Fire Retardant Treated (FRT) Wood:

Although most common FRT products are not corrosive to metal connectors, not all products are non-corrosive. Additionally, they typically require proprietary strength reductions applied to the lumber in accordance with the manufacturer's specifications. Since the lumber strength is lower, the lateral and withdrawal resistance of nails must also be reduced accordingly. It is important to note that some fire retardants cause the wood to absorb more moisture from the air than untreated lumber. Consequently, the connector may be exposed to a higher level of moisture, resulting in more corrosion.

Swimming Pools:

This is one of the most hazardous environments for steel connectors due to continuous exposure to high temperature, high moisture content, and corrosive chemicals such as chlorine, bromine, and other disinfectants. The combination of all these factors can lead to accelerated corrosion and premature structural failure. The connections should be periodically inspected. This environment is so corrosive that all possible preventive measures should be employed to prevent the hanger from being exposed to the pool water. These include the use of a vapor barrier and a ventilation system that does not take the air from the pool environment.

Additionally, it has been known that certain grades of stainless steel (316 and others) are susceptible to a mode of structural failure known as stress corrosion cracking (SCC) when exposed to a swimming pool environment. SCC is usually localized near areas of high residual stress and small cracks can rapidly propagate and cause catastrophic failures. The connections should be periodically inspected. See warning below.

WARNING

Stainless steel connectors and fasteners shall not be used for metal hangers over swimming pools due to stress corrosion cracking. SCC has been known to occur under the following conditions:

- Use of certain grades of stainless steel (grades 316 and others).
- Structural members subjected to high tensile stress.
- Presence of certain chemicals, including chlorine and bromine.

Gold Coat may be the best choice in this environment.

Corrosion Information

The **Structural Connectors Coating Recommendations** table below was developed by reviewing field service performance and accelerated corrosion test results. They are offered as general guidelines and are not intended to cover all possible service conditions. Additional consideration may also be needed for:

- wet service conditions
- preservative treated lumber
- fire retardant treated lumber
- strength reducing chemicals
- building near salt water coastal areas

Additionally, the **Corrosion Protection Guidelines** to the right may also be used to assist in making the proper choice of corrosion protection.

The building designer/engineer has the ultimate responsibility of selecting the most viable protective coating based on knowledge of project specific corrosive environments and local building code requirements.

Corrosion Protection Guidelines:

- MiTek recommends stainless steel connectors for the highest level of corrosion protection. As an economical alternative to stainless steel our new Gold Coat connectors are specifically designed for exterior application when in contact with preservative treated wood.
- For connectors in contact with preservative treated wood, the Triple Zinc option provides the minimum G-185 coating thickness required by code and is an economical alternative for exterior applications.
- The use of correct fastener with the connector is critical. Stainless steel connectors require stainless steel fasteners. For exterior applications, hot-dip galvanized fasteners (HDG) or exterior coat (EXT) must be used with both Triple Zinc, hot-dip galvanized or EXT finishes. Gold Coat connectors require gold coat or hot-dip galvanized fasteners.
- MiTek's zinc dichromate WS Structural Wood Screws are not recommended for use with preservative or fire-retardant treated wood. Some wood structural screws are available in Gold Coat or exterior coat.
- MiTek clearly differentiates standard interior G90 connectors from the corrosion resistant connectors. Gold Coat connectors are distinguishable from other connectors due to their gold color. Triple Zinc (TZ) connectors are affixed with a label containing green text indicating G-185 finish.

Structural Connectors Coating Recommendations

AWPA ⁹ Use Category	Service Conditions	Use Environment	Example Applications	Preservatives and Retentions ^{6,7,10}	Minimum Coating Requirements ^{1,2,3,4}
UC1 Interior/Dry	Interior construction, Above ground, Dry	Continuously protected from weather or other sources of moisture	General framing, interior construction	Untreated, SBX-DOT, Zinc Borate, Organic	Primer, G90
UC2 Interior/Damp	Interior construction, Above ground, Damp	Protected from weather, but may be subject to sources of moisture	Sill plates	SBX-DOT, Zinc Borate, Organic ACQ-D (0.15), CA-B (0.10), CA-C (0.06), MCQ (0.06), μCA-C (0.05)	Primer, G90 Triple Zinc (G-185) ^{8,9} , HDG (post hot dipped), Exterior Coat ¹²
UC3A Above Ground Protected	Exterior construction, Above ground, Rapid water runoff	Exposed to all weather cycles, not exposed to prolonged wetting	Exposed exterior beams or columns in an open, covered structure	ACQ-D (0.25), MCQ (0.15), CA-B (0.10), CA-C (0.06), μCA-C (0.05), Organic	Triple Zinc (G-185), HDG (post hot dipped), Exterior Coat ¹² or MiTek Gold Coat
UC3B Above Ground Exposed	Exterior construction, Above ground, Poor water runoff	Exposed to all weather cycles, including prolonged wetting	Deck beams and joists	ACQ-D (0.25), MCQ (0.15), CA-B (0.10), CA-C (0.06), μCA-C (0.05), Organic	Triple Zinc (G-185), HDG (post hot dipped), or MiTek Gold Coat
UC4A Ground Contact General Use	Ground contact, Fresh water; includes above ground applications	Ground contact or fresh water exposed to all weather cycles, Normal exposure	Deck posts, beams and joists. Fresh water docks ¹¹	ACQ-D (0.40), MCQ (0.23), CA-B (0.21), CA-C (0.15), μCA-C (0.14)	Triple Zinc (G-185), HDG (post hot dipped), or MiTek Gold Coat ⁵
UC4B Ground Contact Heavy Duty	Exterior construction, Ground contact, Critical components	Ground contact, fresh/salt water water splash exposed to all weather cycles	Permanent wood foundations, critical structural members	ACQ-D (0.60), MCQ (0.23), CA-B (0.31), CA-C (0.25), μCA-C (0.23)	Stainless Steel

1) G90 and G-185 refer to galvanization requirements for ASTM A653 material.
 2) Connectors galvanized to ASTM A123 may be used in place of either G90 or G185 coatings.
 3) Other coating may be suitable for a given environment if the conditions are known and predictable.
 4) For G185 connectors use fasteners galvanized per ASTM A153 or EXT finish. For Gold Coat connectors, use Gold Coat fasteners and for stainless steel connectors, use stainless steel fasteners.
 5) If the environment has the potential to contain elements which may make it more corrosive, the use of stainless steel is recommended.
 6) MCQ is a micronized copper treatment such as *Micro Pro* by Koppers. μCA-C is a dispersed copper treatment manufactured by Arch Treatment Technologies. Organic preservatives include L³ from Arch Treatment Technologies and EcoLife II from Viance, LLC.
 7) For wood treatments not shown, contact MiTek or the wood preservative manufacturer for recommended coatings.
 8) Testing by MiTek has found that in interior applications where the treated wood will remain relatively dry during its service life the use of G90 connectors with MCQ or μCA-C treated wood is appropriate.
 9) American Wood Protection Association Standard U1-16.
 10) SBX/DOT= Sodium Borate; ACQ-D = Alkaline Copper Quat Type D; CA-B = Copper Azole Type B; CA-C = Copper Azole Type C; MCQ = Micronized Copper Quat; μCA-C = Dispersed Copper Azole Type C. The number listed in the parenthesis is the required retention level in pounds per cubic foot, or PCF.
 11) Deck joists and beams must be treated to Use Category UCA4 when they are difficult to maintain, repair or replace and are critical to the performance and safety of the deck.
 12) Users must perform periodic inspection and provide regular maintenance to ensure the satisfactory performance of the structure.

Corrosion Information

Corrosion Resistant Finishes

MiTek offers several corrosion resistant finishes to cover a range of corrosion performance. For products available in corrosion resistant finishes, reference the “Corrosion Finish” column in the tables and Corrosion Key located by the table footnotes or pages 16-18 for a complete listing of corrosion resistant products.

Corrosion Protection Level	Finish / Material	Description	Required Fastener	Ordering
CONNECTORS				
	Primer	Primer paint is used to protect steel during shipping and installation but is not considered a corrosion protection method when installed in corrosive environments	Bright fasteners	Stock number as listed in the table
	G90 Galvanizing	Galvanizing provides a prefabrication coating of 0.90 ounces of zinc per square foot of surface area (both sides) measured in accordance with ASTM A653	Bright fasteners	Stock number as listed in the table
	Triple Zinc (TZ) (G-185 Galvanizing)	TZ galvanizing provides a prefabrication coating of 1.85 (G-185) ounces of zinc per square foot of surface area (both sides) measured in accordance with ASTM A653	Hot-dip galvanized or Exterior Coat fasteners	To order, add TZ to stock number, as in C44-TZ
	Hot-Dip Galvanized (HDG)	HDG coating provides an after-fabrication hot-dipped zinc coating. The coating thickness is dependent on the connector material, but generally ranges from 1.2 to 2.3 ounces of zinc per square foot of surface area (both sides). Hot-dip products meet requirements set forth in ASTM A123	Hot-dip galvanized or Exterior Coat fasteners	To order, add HDG to stock number, as in KCC44-HDG
	Gold Coat (GC)	Gold Coat is a proprietary multi-layer protection system. It is comprised of a top coat barrier layer and a galvanized layer placed over a steel substrate	Gold Coat or Hot-dip galvanized fasteners	To order, add GC to stock number, as in AC7-GC
	Stainless Steel (SS)	Best option for corrosion protection. Quality stainless steel (316SS grade steel) is used to fabricate connectors. Although costs are higher, some applications may need the virtual corrosion proof quality of stainless steel	Stainless Steel fasteners	To order, add SS to stock number, as in PBES44-SS
FASTENERS				
	Yellow Zinc	Zinc yellow chromate finish		Stock number as listed in the table
	Hot-Dip Galvanized (HDG)	HDG coating provides an after-fabrication hot-dipped zinc coating. The coating thickness is dependent on the connector material, but generally ranges from 1.2 to 2.3 ounces of zinc per square foot of surface area (both sides). Hot-dip products meet requirements set forth in ASTM A153		Stock number as listed in the table
	Exterior Coat (EXT)	EXT finish is a double barrier coating over zinc outperforming HDG		Stock number as listed in the table
	Gold Coat (GC)	Gold Coat is a proprietary multi-layer protection system. It is comprised of a top coat barrier layer and a galvanized layer placed over a steel substrate		Stock number as listed in the table
	Stainless Steel (SS)	Best option for corrosion protection		Stock number as listed in the table

Product Information

U.S. Standard Steel Gauge Equivalents in Nominal Dimensions

Gauge	Approximate Dimensions		Decimals (inches)		
	Inches	Millimeters	Uncoated Steel	Galvanized Steel (G90)	Triple Zinc (G-185)
3	1/4	6.0	0.238	--	--
7	3/16	4.5	0.171	0.186	--
10	9/64	3.4	0.129	0.138	0.140
11	1/8	3.0	0.114	0.123	0.125
12	7/64	2.7	0.099	0.108	0.110
14	5/64	2.0	0.070	0.078	0.080
16	1/16	1.5	0.055	0.063	0.065
18	3/64	1.2	0.044	0.052	0.054
20	1/32	1.0	0.033	0.040	0.042
22	1/32	0.8	0.029	0.033	0.036

*Actual steel dimensions will vary from nominal dimensions according to industry tolerances.

Maximum Shear Capacity of Joist or Rafter

The table below indicates the calculated shear capacity of different dimensional lumber sizes for various wood species in accordance with Section 3.4.2 of the 2018 NDS®.

Wood Species	Allowable Shear on Bending Member ^{1,2,3}											
	Joist or Rafter											
	2 x 4			2 x 6			2 x 8			2 x 10		
	100%	115%	125%	100%	115%	125%	100%	115%	125%	100%	115%	125%
DF	630	725	788	990	1139	1238	1305	1501	1631	1665	1915	2081
SP	613	704	766	963	1107	1203	1269	1459	1586	1619	1862	2023
S-P-F	473	544	590	743	854	928	979	1126	1223	1249	1436	1561
Hem Fir	525	604	656	825	949	1031	1088	1251	1359	1388	1596	1734

- 1) Applies to nominally dimensioned joists as listed, where moisture content < 19% and temperature < 100° F.
- 2) Loads apply to: DF: Douglas Fir-Larch (G=0.50), Fv=180 psi; SP: Southern Pine (G=0.55), Fv=175psi; S-P-F: Spruce-Pine-Fir (G=0.42), Fv=135psi; Hem Fir (G=0.43), Fv=150psi.
- 3) 115% and 125% loads are increased for short-term loading in accordance to the code.

Roof Pitch

If common Rafter Roof Pitch is ...		Then Hip/Valley Rafter Roof Pitch becomes ...		Slope Conversion Table	
Rise / Run (inches)	Slope (degrees)	Rise / Run (inches)	Slope (degrees)	Rise / Run (inches)	Slope (degrees)
1/12	5	1/17	3	0/12	Flat
2/12	10	2/17	7	1/12	5
3/12	14	3/17	10	2/12	10
4/12	18	4/17	13	3/12	14
5/12	23	5/17	16	4/12	18
6/12	27	6/17	19	5/12	23
7/12	30	7/17	22	6/12	27
8/12	34	8/17	25	7/12	30
9/12	37	9/17	28	8/12	34
10/12	40	10/17	30	9/12	37
11/12	42	11/17	33	10/12	40
12/12	45	12/17	35	11/12	42
				12/12	45

1) Use this conversion table only for hip/valley rafters that are skewed 45° right or left. All other skews or dual pitch roofs will cause the slope to change from that listed above.

Special & Custom Connectors

MiTek is committed to meeting every need you have and we understand that stock connectors will not meet all application or design requirements. Our Technical Assistance Representatives will work with you to develop and fabricate the Special or Custom connector you need.

What is the difference between a “Special” and a “Custom” connector?

A “Special” is a stock MiTek connector that is modified within the limits listed in the Specialty Options table for that connector. A summary of Specialty Options can be found on page 320-321 of this catalog.

A “Custom” is a connector that does not closely resemble a stock or special part offered in our catalog. Also, a “Custom” connector may be a stock connector that is modified outside of the limits listed in the Specialty Options tables or is not listed in the catalog as having a specialty option available. Product drawings must be provided by the customer and will be manufactured by MiTek in accordance to customer specifications. Customs should be verified prior to ordering, are not refundable and may not support published catalog loads.

See page 320-324 for additional information.

Special Order EXAMPLE: Skewed HD < 45°

Custom Order EXAMPLE: 3 Pocket Girder Truss Hanger

General Information

Product Notes

- 1) This catalog reflects the most current information available at the time of printing. However, we are continually improving our products through better engineering design and development and recommend visiting our website for the latest on-line version of the catalog at MiTek-US.com. MiTek reserves the right to change specifications, designs, and models at any time without notice and liability for such changes. This catalog may not be reproduced in whole or in part without the prior written approval of MiTek.
- 2) This catalog reflects changes to product design and allowable loads to some MiTek products. The information presented in this publication supersedes all previously published Product Catalogs.
- 3) This Product Catalog was designed as a general reference for the MiTek Product Line. Various specialized publications have also been developed for design professionals, truss manufacturers, contractors, and building material distributors. Consequently, product information may vary from one publication to another due to product development testing and revisions to code evaluation report upgrades. We recommend visiting our website for the latest on-line version of these specialized publications.
- 4) The type and quantity of fasteners used to install MiTek products is critical to connector performance. To achieve the allowable loads presented in this catalog, all specified fasteners must be used and proper installation procedures observed. Verify that the dimensions of the supporting members are sufficient to receive the specified fasteners. All product modifications will void the warranty unless prior written consent from MiTek has been obtained.
- 5) Some connector models are listed more than once to indicate installation and/or fastener options.
- 6) New products or updated product information are designated in **blue**.
- 7) Throughout this catalog, dimensions are expressed in inches and loads in pounds unless specifically noted otherwise.
- 8) Some MiTek products show both nail fastening and bolt schedules. In those cases, specific loads for each has been identified. Nail and bolt values cannot be combined unless noted otherwise.
- 9) Load values for 8d, 10d, 16d, and 20d designations in the fastener schedules throughout this catalog refer to common wire nails unless noted otherwise. Nails shall conform to a recognized national standard, such as ASTM F1667, as prescribed by the model building codes.
- 10) Diamond holes are for optional nailing for maximum listed capacity or for temporary hanger fastening during installation.
- 11) Fastener installation may cause wood to split and reduce a fastener's ability to transfer loads into the supporting member. **If wood splitting occurs, consider pre-drilling holes not exceeding 75% of the nail diameter (per the National Design Specification for Wood Construction (NDS) Section 12.1.5.3).**
- 12) Bolts specified in this catalog are through-bolts and must conform to requirements for ASTM A307 Grade A, or ASME SAE Grade 2, or better unless noted otherwise.
- 13) Anchor Bolts must conform to ASTM F1554.
- 14) MiTek connectors listed in this catalog are manufactured for specific sizes of standard dimensional lumber, plated truss or structural composite lumber. **For applications involving unusual supporting conditions environments, contact MiTek. Wood shrinkage or expansion, caused by lack of moisture or excessive moisture, may adversely affect connector installation. Evaluate potential shrinkage or expansion to ensure proper connector installation and performance.**

- 15) The load values listed in this catalog are based on installation to wood with a moisture content of less than 19%, and used in dry service conditions. Load reductions, in accordance with the applicable local Building Code, shall be taken where wood moisture content is greater than 19% at the time of installation or where used in wet service conditions.
- 16) Unless otherwise noted, MiTek products may not be bent or cut for any reason unless prior written consent from MiTek has been obtained. **Field alterations may significantly reduce the published allowable load values in this catalog.**

Design Notes

- 1) Some products have allowable loads that can be applied in several directions (F1, F2, and uplift is a common example). When these products have F1, F2 and/or uplift loads applied simultaneously, it is necessary to make the following check:
$$\frac{F_1 \text{ applied}}{F_1 \text{ allowable}} + \frac{F_2 \text{ applied}}{F_2 \text{ allowable}} + \frac{\text{Uplift applied}}{\text{Uplift allowable}} \leq 1.0$$
As an alternative check for simultaneous loads in more than one direction for embedded truss anchors (pages 244-250), LUGT girder tiedowns (pages 255-256), hurricane angles and connectors (pages 253-254), and hurricane ties (pages 262-265); the applied load in each direction shall not exceed 75% of the listed allowable load in the corresponding direction.
- 2) Unless otherwise noted, the allowable loads shown in this catalog are based on Allowable Stress Design methodology. **Multiply seismic and wind ASD load values by 1.4 or 1.6 respectively to obtain LRFD values.**
- 3) Connector capacities may exceed the allowable capacity of the wood members involved in the connection. A qualified designer should verify that all wood members (supporting and supported) have been properly designed for the connector.
- 4) Verify that the size of the supporting member can accommodate the connector's specified fasteners.
- 5) Some illustrations in this catalog may not reflect additional mechanical reinforcements which may be required to reduce cross grain tension or wood member bending under loading. The design professional is responsible for determining if additional mechanical reinforcement is required during construction.
- 6) MiTek recommends the hanger height be 60% of the joist height for stability during construction.
- 7) Allowable loads of different connector models cannot be combined to resist loads at a single connection location. For special considerations, consult MiTek Customer Service

National Design Specification (NDS) Standard

Unless otherwise noted, the allowable load values presented in this catalog reflect the calculation criteria set forth in the 2018 National Design Specification for Wood Construction (NDS[®]) published by the American Forest and Paper Association; with the methodology prescribed in ICC-ES AC13 or other relevant acceptance criteria applied.

Material

MiTek selects steel for its various products in accordance with application needs and steel properties, including tensile strength, ductility, corrosion resistance, gauge, and weldability. See specific code evaluation reports or consult MiTek for additional steel information on specific products. products are manufactured from steel which meets ASTM A653, ASTM A1011, or ASTM A36, ASTM A1018 or ASTM A666 standards.

General Information

Testing and Product Design Loads

On all structurally-rated products, MiTek performs calculations and full-scale testing in accordance with ICC-ES AC13, ASTM D7147, and other applicable ICC-ES acceptance criteria and standards recognized by model code agencies. All testing is conducted or verified by an approved IAS accredited third-party testing laboratory which generates an independent test report. In accordance to these standards the design loads for joist hangers and similar devices listed are the lowest results obtained from one of the following methods:

- 1) The lowest ultimate tested load divided by three.
- 2) Average load producing 1/8" deflection.
- 3) Calculations based on NDS and applicable Standards.

The allowable loads for some products have been increased in accordance with the NDS® by applying a Load Duration Factor, C_D for fasteners in wood. Stress increases have not been applied to steel components of the products.

Floor / Design Load	100% (no increase).
Roof Snow	115% of design load for 2-month duration of load
Roof Non-Snow	125% of design load for 7-day duration of load.
Uplift	160% of design load for wind/seismic loading

Adjustment Factors for Alternate Wood Species

The design values published by MiTek by default, pertain to connecting Douglas Fir-Larch (DF) and Southern Pine (SP) lumber. We also have Spruce-Pine-Fir (SPF) design values integrated into a portion of the allowable load tables. In instances where the MiTek fasteners and connectors are installed with alternate lumber species not published, use the tables below as a guide for assigning adjustment factors to determine design values.

Product Type	Loading Type	Reduction Factor Applied to DF/SP Published Value ^{1,2}
Straps	Uplift	$\frac{G}{0.5}$
Hurricane Ties		
Holdowns		
Embedded Straps/Anchors		
Caps and Bases	Uplift	$\frac{G}{0.5}$
	Download	Lesser of: $\frac{FcL}{625}$ & $\frac{G}{0.5}$
Joist Hangers	Uplift	$\frac{G}{0.5}$
	Download	Lesser of: $\frac{FcL}{625}$ & $\frac{G}{0.5}$
All Other Connectors	Any	Lesser of: $\frac{FcL}{625}$ & $\frac{G}{0.5}$

1) Obtain Specific Gravity "G" and FcL values from 2018 National Design Specification for Wood (NDS) Table 4A. See table below also.
 2) Adjustment factors must be less than or equal to 1. Published values cannot be raised.

Wood Properties of Common Alternate Wood Species ¹		
Species	Specific Gravity (G)	F _{C_{PERP}} - FcL
Douglas Fir-South	0.46	520
Hem-Fir	0.43	405
Hem Fir North	0.46	405
Spruce-Pine-Fir (SPF)	0.42	425
Spruce-Pine-Fir South	0.36	335
Western Cedars	0.36	425
Northern White Cedar	0.31	370
Redwood	0.37	425

1) Values in this table are from 2018 NDS® Table 4A.

Installation Notes

- 1) Use proper safety equipment during connector installations. Always wear gloves when handling connectors.
- 2) All welding should be done in accordance with the American Welding Society (AWS) Standard by a certified welder. **Caution: Welding galvanized steel may produce harmful fumes and should only be performed in well-ventilated environments.**
- 3) The proper type and quantity of fasteners must be used to install MiTek products. To achieve the published allowable loads, install with the fasteners specified for that particular product. Some products allow for alternate nail installations. Refer to the "Optional Nails for Face Mount Hangers and Straight Straps" table on page 25 of this catalog for load adjustments when using alternate nailing. All specified fasteners must be properly installed prior to applying load to the connection.
- 4) Drill bolt holes a minimum of 1/32" and a maximum of 1/16" larger than the diameter of the bolt to be installed (per the 2018 NDS®, Section 11.1.3).
- 5) Washers should always be used under the head or nut of a bolt when not in contact with the connector unless noted otherwise.
- 6) It is permissible to use gun nails to install some connectors as long as the nail length and diameter are the same and installed through all pre-punched holes. MiTek recommends the use of nail guns featuring hole-locating mechanisms. Please note that many nail guns use fasteners that are shorter than the common nail size and load reductions will result. Contact MiTek Engineering. **Caution: Always follow nail gun manufacturer's safety guidelines.**
- 7) Joists installed in hangers should bear fully on the connector seat and shall be cut to fit against the header with a gap no greater than 1/8" between the joist end and header face.
- 8) Multiple-ply members must be properly fastened together to distribute loads as a single member.
- 9) Top mount hangers shall be installed with the back of the hanger tight to the face of the header.
- 10) Top mount hangers installed in floor systems may produce unevenness. This will vary based on thickness of the top flange and nail heads. **If a problem is anticipated, the effects can be mitigated by dapping or notching the beam or cutting the subfloor at hanger locations. Face mount hangers will eliminate this problem.**

FASTENERS

FASTENERS

Nails	24-26
Fastening Identification / Features	27
Screws	28-40
Bolts	41

Proper fasteners are a critical component in a sound wood frame structure. To ensure successful installations of its connectors, MiTek offers a full range of structurally-rated nails. All galvanized nails supplied by MiTek are Hot-dipped for greater corrosion resistance. Any MiTek connector requiring a NA16D-RS or NA20D nail is shipped with the nails attached to the connector in convenient poly bags.

Finish: See Nail Specification Table on page 26

Materials: ASTM A 123; ASTM A 153 (HDG)

Installation:

- Allowable shear values assume nail embedment into the wood of the entire nail or 10 nail diameters (whichever is less). Otherwise, the nail must be embedded at least 6 nail diameters, with the load reduced using the equation below:

$$\text{Reduced Load} = \frac{\text{Published Load} \times \text{Actual Penetration}}{\text{Nail Diameter} \times 10}$$

- Load reductions may occur if nails are used other than those specified. See the table [Optional Nails for Face Mount Hangers](#) below for load reduction factors regarding nail substitutions.
- For pneumatic nail use, see Installation Notes on page 21 and reference MiTek's technical bulletins.

Continued on next page

Optional Nails for Face Mount Hangers and Straight Straps

Reductions are taken from appropriate DF value found in the load table.

Catalog Nail	Replacement Fastener ¹	Allowable Load Adjustment Factor

	16d x 2-1/2 (0.162" x 2-1/2")	1.00	1.00	0.86
	No. 8 (0.164") x 1-1/2 Wood Screw	0.67	0.73	0.58

1) No. 8 x 1-1/2 Wood Screw shall conform to ANSI/ASME Standard B18.6.1-1981.

2) Reductions for slant nail hangers (HUS, JDS, JH, JPF, JUS, MSH, MUS or THDH) are only applicable when full length joist/slant nails are used.

How to Use:

The base value is the catalog listed nail in Douglas Fir-Larch and the adjustment factor is the multiplier for the applicable replacement nail and wood combination.

- Adjustment factors may vary with some custom hangers or steel thicker than 10 gauge. Contact MiTek for exceptions.
- Roofing nails shall not be substituted for any nail size or type.

Optional Nails Example:

JL210 – listed load is 1650 lbs. @ 100% for 10d common nails.

If substituting:

8d common nails with DF-L or LVL:
1650 lbs. x .83 = 1369 lbs.

8d common nails with SP:
1650 lbs. x .90 = 1485 lbs.

8d common nails with S-P-F:
1650 lbs. x .72 = 1188 lbs.

No further reductions are required.

- 1) Loads are calculated to specifications of Part 12 of the National Design Specifications for Wood Construction (NDS®), 2018 Edition.
- 2) Loads apply to Douglas Fir (G=0.50) and Southern Pine (G=0.55). For Spruce-Pine-Fir (G=0.42) multiply above values by 0.86. For other wood types refer to NDS or consult MiTek.
- 3) HDG = Hot-Dip Galvanized; SS = Stainless Steel; GC = Gold Coat; Bright = No Finish.
- 4) For 3 gauge steel with Fu=58,000 psi and 7 gauge thru 22 gauge steel with Fu=55,000 psi. Shear values assumes full penetration of at least 10 nail diameters.
- 5) Fastener values may be increased for duration of load.
- 6) Withdrawal loads are in pounds (lbs) per linear inch of embedment into main member.
- 7) Bright finish common and sinker nails are listed in table for reference only. MiTek does not stock these type nails.
- 8) Stainless steel 8d x 1-1/2 nails are ring shank. Other stainless steel nail sizes in table are smooth shank, and withdrawal values are in accordance with Table 12.2D of the 2018 NDS.

Corrosion Finish Key
■ Stainless Steel ■ Gold Coat
■ HDG ■ Triple Zinc

Minimum Fastener Penetration Table

Nail Penny	Wire Gauge	Shank Diameter (in)	Minimum Penetration for Full Shear Load (in)	Minimum Penetration for Reduced Shear Load ¹ (in)
6d	11-1/2	.113	1.13	0.68
8d	10-1/4	.131	1.31	0.79
10d	9	.148	1.48	0.89
12d	9	.148	1.48	0.89
16d Sinker	9	.148	1.48	0.89
16d	8	.162	1.62	0.97
20d	6	.192	1.92	1.15

- 1) For penetration less than this distance, the nail has no value.
- 2) Penetrations are derived according to the NDS.

Copyright © 2024 MiTek, Inc. All Rights Reserved.

Reduced Fastener Penetration Example (See table above):

HD210 (Min) – listed load is 1540 lbs. @ 100% for 16d common nails.

Reduced HD210 capacity if using a 2x DF-L or SP header:

$$\frac{1540 \text{ lbs.} \times 1.5}{1.62} = 1425 \text{ lbs.} @ 100\%$$

Round Holes:
Always fill all (normal-size) round nail holes, unless otherwise noted.

Diamond Holes:
Optional nailing for maximum listed capacity or for temporary hanger fastening during installation.

When there are **MIN** and **MAX** values:

MIN: fill all round nail holes

MAX: fill all round and diamond holes

Large Round Holes:
For concrete/masonry installation; no need to be filled when connected to wood. Large round holes may be used for manufacturing which do not require a fastener. Verify fastener schedule in catalog.

Obround Holes:
For ease of nailing at a tight location; always fill.

Right skew

Drive nails at angle

Left skew

Dimple Holes:
Guide double shear nails into the joist and header at a 30° to 45° angle

Use specified standard length common nails.
16d common and 10d common nails are 3-1/2" and 3" long respectively.

Bend line holes

Drive bend line nails into header at 45° to achieve published strength

Typical I-Joist Nailing

Seat Cleat® helps lock I-Joist into place
Do not nail through the Seat Cleat®

Slant Nailing via dimple nail holes

Diamond holes (no need to fill in seat)

Common Nailing Errors

Wrong Angle

When a nail is driven into the bottom flange of the wood I-Joist parallel to the glue lines, separation of veneers can occur which substantially reduces the design loads of the connection.

Nail Too Long

When using nails longer than MiTek's recommended nails, bottom flange splitting may occur. Also, this can raise the wood I-Joist off the seat, resulting in uneven surfaces and squeaky floors along with reduced design load.

WS Hex Head Interior Structural Wood Screws

Fasteners

The WS Wood Screw is a self-drilling screw used for numerous interior framing applications. For use in wood-to-wood and steel-to-wood applications. Head stamped to indicate length for easy inspection.

Features and Benefits:

- No predrilling
- Type 17 point reduces installation torque and splitting
- 3/8" Hex Drive
- Length identification stamps on all WS heads
- 1/4" shank diameter, 0.54" head diameter

Materials: 1/4" diameter Grade 5 steel

Finish: Yellow Zinc

Codes: IBC, FL, LA

Installation:

- Screws are self-drilling.
- Install using a low speed clutch drill with 3/8" hex head driver. The washer head should be flat to the surface and the serrations will oppose turning and release the clutch. Do not over-tighten the screws.
- Care should be given to ensure the fastener is installed perpendicular to the plane of the side plate.

1) Zinc = Yellow Zinc Dichromate.

2) Allowable shear loads assume a side plate tensile strength of 45 ksi for 14 gauge and 10 gauge, 52 ksi for 7 gauge and 58 ksi for 3 gauge.

3) Shear loads for wood-to-wood connections assume a side member thickness of 1-1/2".

4) Loads are for 100% duration of load factors, and may be increased for other duration factors in accordance with the NDS.

5) Withdrawal loads for steel-to-wood connections assume a side plate thickness of 1/4" or less.

The MiTek Washer Head is the ideal screw for interior Multi-Ply EWP and dimensional wood connections. The specific lengths of the WSWH allow for one-sided connections on multi-ply beams and girder trusses.

Features and Benefits:

- No predrilling
- Flat head style allows for less interference after installation
- Type 17 point reduces installation torque and splitting
- T30* drive eliminates cam-out
- Nibs under head seat head flush to wood surface
- Length identification stamps on all WSWH heads
- 1/4" shank diameter, 0.75" head diameter

Materials: 1/4" diameter Grade 5 steel

Finish: Yellow Zinc

Codes: IBC, FL, LA

Installation:

- For best results, install the MiTek Washer Head using a high torque, 1/2" variable speed drill.
- Bring the washer portion of head flush to the surface of the wood. **Do not overdrive.**

Attaching 2x Ledger-to-Wall Studs Application

MiTek's WSWH Washer Head Structural Wood Screw can be used to attach a ledger to studs directly, through 1/2" APA rated sheathing or through one or two layers of 5/8" gypsum wallboard (drywall). Screws are to be installed into the wide face of the single 2x stud, through the gypsum board and into the center of the narrow face of the 2x stud.

Installation:

- Ledger design to be performed by a certified design professional.
- Locate studs in wall where ledger is to be installed.
- Install MiTek's WSWH5 structural wood screws through ledger and 5/8" gypsum wallboard into wall framing using a T30* drive.
- Follow the minimum edge distance guidelines in images shown below.
- Wall design must be performed by certified design professional.
- Care should be taken to install the ledger only where studs are plumb and free of any defects.
- **WSWH45 should be used when no gypsum wallboard is present.**

Typical 2x8 Ledger attached through 2 layers of 5/8" Gypsum Wallboard installation

MiTek Stock No.		Ledger Size ⁹	Number of Screws per Stud ^{4,8}	Allowable Shear Per Stud (Lbs.) ^{2,5,6,7}	
Zinc Finish ¹	EXT Finish ¹			DF/SP SG ≥ 0.50	S-P-F/HF 0.42 ≤ SG < 0.50
WSWH45	WSWH45-EXT	2x6	2	520	455
WSWH5	WSWH5-EXT	2x8 or 2x10	3	860	750
		2x12	4	1040	900

2x6 Detail

2x8 Detail

2x10 Detail

2x12 Detail

- 1) Zinc = Yellow Zinc Dichromate; EXT = Exterior Coat.
- 2) Allowable loads are based on DF or equivalent wood members with a specific gravity ≥ 0.50, or SPF/HF members with specific gravity in the following range: 0.42 ≤ SG < 0.50.
- 3) Gypsum board must be attached per building code requirements.
- 4) Screws must be installed in the center of the 2x stud, with a tolerance of 3/16" to either side. Minimum loaded end distance for the stud is 3" and 6" when loaded away from the end. Ledger end distance must be 6" or greater for full values. For ledger end distances between 2" and 6" use 50% of the load table, for end distance between 2" and 4" predrill with a 5/32" bit.
- 5) The values above can be used when designing a ledger connection with (1) or (2) layers of 5/8" gypsum board, a direct connection with no gypsum between the ledger and studs, or a ledger connection with a single layer of APA rated 1/2" OSB.
- 6) Allowable loads are shown above at a load duration factor of C_D = 1.00. Loads may be increased where applicable to the current NDS. When in-service moisture content is greater than 19%, use C_M = 0.70.
- 7) For LRFD values, the values above should be adjusted in accordance with the 2018 NDS, Section 11.3.
- 8) Main members (stud) shall be loaded parallel to grain with a minimum penetration of 2-1/4" while side members (ledger) shall be loaded perpendicular to grain with a minimum penetration of 1-1/2".

Joining Multi-Ply Dimensional Lumber Beams Application

The MiTek WSWH Structural Wood Screws have been designed specifically for use in joining wood members of multiple-ply dimensional lumber beams. Using a standard 1/2" low speed/high torque drill, install screws into the side of the outermost ply. As the threads fully engage the final ply, allow the underside of the washer head to pull the plies firmly together. Washer head will install flush with the surface of the wood, but do not overdrive as this may damage the beam. Refer to the information on page 32 for proper WSWH screw size selection and fastening pattern.

Minimum Spacing Requirements:

Fastener Identification

For easier selection and post installation inspection, all MiTek Structural Wood Screws carry an identifying head marking.

Top Loaded Beams

Where floor joists rest on all plies of the beam, WSWH screws should be installed in two staggered rows at 24" O.C. spacing. Maintain the minimum end and edge distance as indicated above.

For beam depths of 18" or more, this pattern should be increased to three staggered rows of WSWH screws every 24" on center.

General Guidelines:

- Excessively warped or curved lumber should never be forced into alignment by use of clamps, screws or bolts as splitting may occur, potentially decreasing the carrying capacity of the beam.
- The WSWH278, WSWH45, and WSWH6 are not designed for use with engineered wood. Refer to MiTek's Joining Multi-Ply Engineered Wood (EWP) Beams Application information on page 33.
- A qualified designer or engineer should always be consulted for critical assemblies and fastening requirements.

Fastener Size Selection by Assembly Type
(2 rows shown)

Side Loaded Beams

Where floor joists are joined to the side of the beam (typically using a joist hanger), this load table must be used to establish the proper pattern based on the design load as determined by the engineer and noted on the plans.

Length (in)	MiTek Stock No.	No. of Screws Vertical Column	Spacing Between Screws in a Row (in)	Allowable Uniform Load Applied to Either Outside Member by Assembly Type (lbs/lineal ft) (See Graphics) ^{1,2,3,4,5,6}

Head Side Multiplier ⁷				1.00	1.45	1.45	1.00	1.67	1.67	

- 1) Allowable loads are derived from tested fastener values as reported in ICC-ES ESR-2761.
- 2) All numbers in this table are based on Douglas Fir-Larch (DF), Southern Pine (SP), and Spruce-Pine-Fir (SPF). The DF/SP values are based on $SG \geq 0.50$. The SPF values are based on $0.42 \leq SG < 0.50$.
- 3) The uniform loads in this table relate only to the capacity of the fastener to transfer shear loads between plies. The capacity of the beam may be less and should be verified by design professional.
- 4) Values listed reflect 100% load duration. ($C_D=1.0$) The designer may apply adjustment factors to increase or decrease these loads per the NDS based on conditions for each assembly.
- 5) To minimize rotation, 6" wide beams shall be side loaded only when loads are applied to both sides of the beam, with the lesser loaded side bearing at least 25% of the overall design load.
- 6) Load values depicted assume all uniform load is applied to the outermost ply.
- 7) When the uniform load is applied to the outermost ply with the screw head, listed allowable loads can be multiplied by this value.

Joining Multi-Ply Engineered Wood (EWP) Beams Application

The MiTek WSWH Structural Wood Screws have been designed specifically for use in joining wood members of multiple-ply engineered wood beams (LVL, LSL & PSL). Using a standard 1/2" low speed/high torque drill, install screws into the side of the outermost ply. As the threads fully engage the final ply, allow the underside of the washer head to pull the plies firmly together. Washer head will install flush with the surface of the wood, but do not overdrive as this may damage the beam. Refer to the information below for proper WSWH screw size selection and fastening pattern.

Minimum Spacing Requirements:

WSWH338 – 3-3/8"
 WSWH5 – 5"
 WSWH634 – 6-3/4"

Fastener Identification

For easier selection and post installation inspection, all MiTek Wood Screws carry an identifying head marking.

Top Loaded Beams

Where floor joists rest on all plies of the beam, WSWH screws should be installed in two staggered rows at 24" O.C. spacing. Maintain the minimum end and edge distance as indicated above.

For beam depths of 18" or more, this pattern should be increased to three staggered rows of WSWH screws every 24" on center.

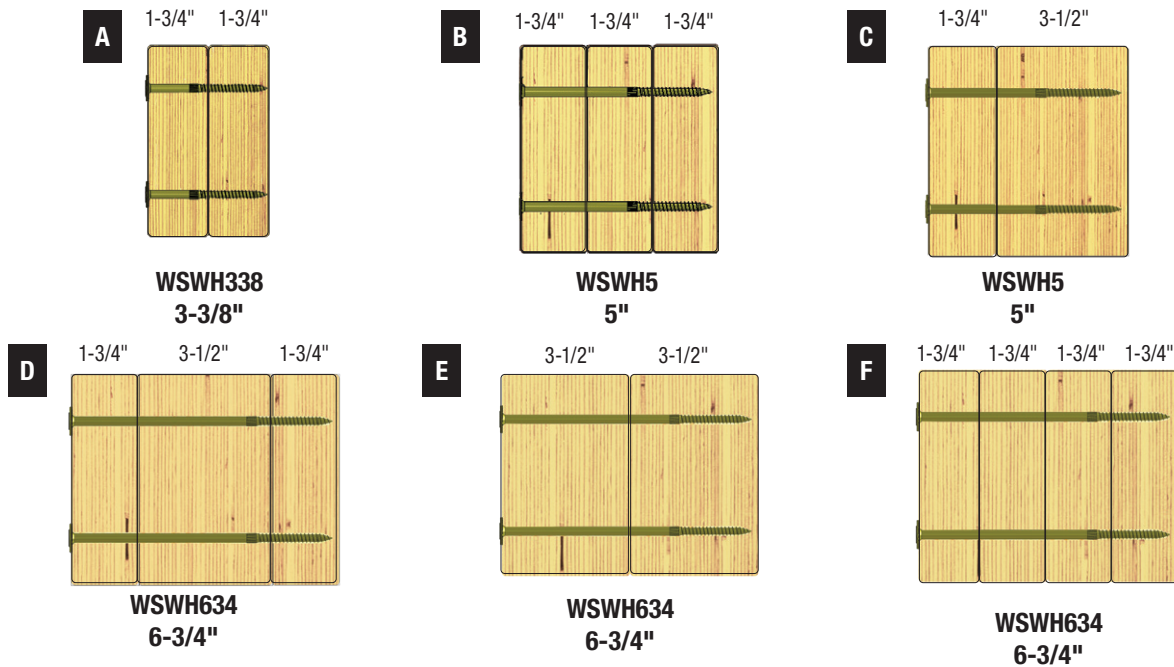

General Guidelines:

- Beams wider than 7" require special consideration by the design professional. The values on the next page do not apply.
- Excessively warped or curved LVL should never be forced into alignment by use of clamps, screws or bolts as splitting may occur, potentially decreasing the carrying capacity of the beam.
- The WSWH338, WSWH5, and WSWH634 are not designed for use with dimensional lumber. Refer to MiTek's Joining Multi-Ply Dimensional Lumber Beams Application information on page 31.
- A qualified designer or engineer should always be consulted for critical assemblies and fastening requirements.

1) Allowable loads are derived from tested fastener values as reported in ICC-ES ESR-2761.
 2) The uniform loads in this table relate only to the capacity of the fastener to transfer shear loads between plies. The equivalent specific gravity (SG) and the capacity of the EWP should be verified with manufacturer's literature.
 3) Values listed reflect 100% load duration. ($C_D=1.0$) The designer may apply adjustment factors to increase or decrease these loads per the NDS based on conditions for each assembly.
 4) Load values depicted assume all uniform load is applied to the outermost ply.
 5) To minimize rotation, 7" wide beams shall be side loaded only when loads are applied to both sides of the beam with the lesser loaded side bearing at least 25% of the overall design load.
 6) When the uniform load is applied to the outermost ply with the screw head, listed allowable loads can be multiplied by this value.

WS-EXT Hex Head Exterior Structural Wood Screws

Fasteners

The MiTek Hex Head is the ideal screw for numerous framing applications. It can be used in wood-to-wood and steel-to-wood applications.

Features and Benefits:

- No predrilling
- Type 17 point reduces installation torque and splitting
- 3/8" hex drive
- Length identification stamps on all WS-EXT heads
- 1/4" shank diameter, 0.54" head diameter

Materials: 1/4" diameter Grade 5 steel

Finish: Exterior Coat

Codes: IBC, FL, LA

Installation:

- Screws are self-drilling.
- Install using a low speed clutch drill with 3/8" hex head driver.
The washer head should be flat to the surface and the serrations will oppose turning and release the clutch. Do not over-tighten the screws.
- Care should be given to ensure the fastener is installed perpendicular to the plane of the side plate.
- Refer to page 37 for Attaching Deck Ledger to Rim Board Application.

The WSWH is an ideal alternative for the Pro or DIYer to traditional lag screws and through-bolts, for installing deck ledgers and more. It is easy to install and reduces labor on the jobsite. The large, flat washer head maximizes bearing area and allows for less interference after installation.

Features and Benefits:

- No predrilling
- Flat head style allows for less interference after installation
- Type 17 point reduces installation torque and splitting
- T30* drive eliminates cam-out
- Large washer maximizes bearing area
- Nibs under head seat head flush to wood surface
- Length identification stamps on all WSWH-EXT heads
- 1/4" shank diameter, 0.75" head diameter

Materials: 1/4" diameter Grade 5 steel

Finish: Exterior Coat

Codes: IBC, FL, LA

Installation:

- For best results, install the MiTek Washer Head using a high torque, 1/2" variable speed drill.
- Bring the washer portion of head flush to the surface of the wood.
- **Do not overdrive.**
- See page 37 for Attaching Deck Ledger to Rim Board Application, page 30 for Attaching 2x Ledger-to-Wall Studs Application, page 31 for Joining Multi-Ply Dimensional Lumber Beams Application and page 33 for Joining Multi-Ply Engineered Wood (EWP) Beams Application.

Attaching Deck Ledger to Rim Board Application

The MiTek WS structural wood screws can be used to fasten deck ledgers to the rim board (AKA band/rim joist) of structures to meet the connection requirements of the International Residential Building Code (IRC). Both the standard hex head (WS-EXT) and washer head (WSWH-EXT) styles may be used for this purpose. Table R507.9.1.3(1) of the 2021 IRC calls out lag screws for deck ledger attachment and the WS-EXT and WSWH-EXT may be used in place of the lag screws.

Installation:

1. Select the proper MiTek's WS-EXT or WSWH-EXT screw length. The threads should have full engagement with the rim board with the tip of the screw protruding and visible beyond the inside face of the rim board member. See **Section View** image.
2. With appropriate screw length selected, drive the screw through the ledger, sheathing, and rim board with a high torque variable speed drill.
3. Drive screw so head is firm and flush with surface of deck ledger, but do not overdrive.
4. Repeat these steps and install the appropriate number of screws at the prescribed edge, end distance, and spacing as called out in the table below and **Figure 1**.

Head markings for identification

Perspective view

Section view

Figure 1

MiTek Stock No.	Ledger	Live Load	Rim Board	Spacing between WS-EXT / WSWH-EXT Screws based on Joist Span (in)						
				≤ 6-ft	≤ 8-ft	≤ 10-ft	≤ 12-ft	≤ 14-ft	≤ 16-ft	≤ 18-ft
WS35-EXT WSWH358-EXT	DF-L / SP / SPF	40 psf	1-1/2" Solid Sawn	23	17	13	11	10	8	7
			1" Min EWP	22	16	12	11	9	7	7
WS5-EXT WSWH5-EXT	DF-L / SP / SPF	60 psf	1-1/2" Solid Sawn	16	12	9	7	7	5	5
			1" Min EWP	15	11	8	7	6	5	5

- 1) Numbers are based on use of 3-1/2", 3-5/8" and 5" length screws.
- 2) Screw spacing based on requirements of 2021 IRC Section R507.9.1.3 and Table R507.9.1.3.(1) and equivalent spacing of 1/2" diameter lag bolts. Stagger screws into 2 rows.
- 3) Multiple ledger plies should be fastened together to act as one unit independent of the WS-EXT or WSWH-EXT ledger attachment screws.
- 4) Solid Sawn Rim Board shall be Douglas Fir-Larch (DF-L), Southern Pine (SP), or Spruce-Pine-Fir (SPF), G ≥ 0.42.
- 5) 5" length screw shall be used for all 2 ply 2x ledger members.

The WSBH is a multi-purpose structural wood screw ideal for a low profile appearance in wood-to-wood connections. This structural wood screw allows the installer or DIYer to drive the head flush or countersink it below the wood surface. The WSBH is easy to install and a high strength alternative to traditional lags, bolts and pole barn nails.

Features and Benefits:

- No predrilling
- Comparable to 1/2" Lag Screw
- Low profile head style can be driven flush or countersunk
- Type 17 point reduces installation torque and splitting
- T30* drive eliminates cam-out
- Length identification stamps on all WSBH-EXT heads
- 1/4" shank diameter, 0.46" head diameter

Materials: 1/4" diameter Grade 5 steel

Finish: Exterior Coat

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- For best results, install the MiTek Bugle Head using a high torque, 1/2" variable speed drill. Bring the washer portion of head flush to the surface of the wood or countersink.

WSBH-EXT
(Exterior Coat finish)

Specification Table

Size (in)	MiTek Stock No.	Ref. No.	Dimensions (in)			Finish ¹	DF/SP Allowable Loads (Lbs.) ^{2,4}		SPF Allowable Loads (Lbs.) ^{2,4}		LVL Allowable Loads (Lbs.) ^{2,4}		Code Ref.
			L	SH	T		Wood-to-Wood		Wood-to-Wood		Wood-to-Wood		
							Shear 100%	Withdrawal ³ 100%	Shear 100%	Withdrawal ³ 100%	Shear 100%	Withdrawal ³ 100%	
1/4 x 2-1/2	WSBH25-EXT	--	2-1/2	1/4	2	EXT	179	199	151	141	--	--	IBC, FL, LA
1/4 x 4	WSBH4-EXT	--	4	1-3/4	2	EXT	315	282	246	208	252	339

1/4 x 10	WSBH10-EXT	--	10	7-3/4	2	EXT	328	282	288	208	283	339	

- 1) EXT = Exterior Coat.
- 2) Shear and withdrawal loads for wood-to-wood connections assume a side member thickness of 1-1/2" for DF/SP and SPF allowable loads and 1-3/4" for LVL allowable loads.
- 3) Withdrawal loads are derived from the minimum of head pull through tests and withdrawal capacity of threaded portion in main member.
- 4) Load are for 100% duration of load, and may be increased for the other duration factors in accordance the NDS.

1) T30* drive is included in packaging.

* T30 is a trademark of Acument

The LumberLok Exterior Structural Connector Screw is a self-drilling screw that can be used with a number of MiTek connectors and also for wood-to-wood applications. The screws feature a T20* drive head with integral washer and gimlet point for ease of installation. The twin-lead threads drive in twice as fast as the single lead threads significantly reducing installation time. The MiTek head stamp identifies the screw length for easy inspection.

Screw shear capacities are based on a diameter of 0.162" when the shear plane is on the screw shank (SH) and 0.109" when the shear plane is on the threads (T). MiTek LumberLok Exterior Structural Connector Screws have a bending yield strength of 170,000 psi.

Materials: Low carbon hardened steel

Finish: Gold Coat

Codes: IBC, FL, LA

Installation:

- Screws are self-drilling.
- Install using a low speed clutch drill with T20* drive (not included). The washer head should be flat to the surface. Do not over-tighten the screws.
- Installing the screw at an angle may introduce additional bending and tension forces into the fastener if the screw head is not flat to the bearing surface. Care should be given to ensure the fastener is installed perpendicular to the plane of the fastener hole.
- **Impact drivers are not recommended for use with LumberLok Screws**
- Reference list of MiTek connectors compatible with LumberLok screws on page 40.

Specification Table

Size	MiTek Stock No.	Ref. No.	Dimensions (in)				Finish ¹	DF/SP Allowable (Lbs.) ^{2,5}				S-P-F Allowable (Lbs.) ^{2,5}				Code Ref.
			L	SH	T	Withdrawal Capacity ³		Shear Capacity		Withdrawal Capacity ³	Shear Capacity

Common Deck Connectors that are Compatible with LumberLok Connector Screws

This is not a complete list of MiTek connectors that are compatible with LumberLok Connector Screws. Most connectors that are installed with nails can also be installed with LumberLok Connector Screws. For the connectors shown below, the catalog allowable design values will not change when installed with MiTek's LumberLok Connector Screws shown.

For customer convenience, we offer a wide range of bolts specified for the MiTek product line. Each bolt is shipped with two washers and one hex nut.

Materials: Bolts and nuts are standard hex head conforming to ASTM A 307 Grade A or SAE Grade 2 or better. Washers conform to American National Standard Type A plain steel, ANSI B.22.1.

Finish: Zinc plated

Installation:

- For installation into connectors in general, install with both washers unless otherwise directing in this catalog.

Bolt Specification Table

MiTek Stock No.	Description	Thread Length (in)

The SRC Sill Retrofit Connector has been engineered as a ductile retrofit for older buildings in high seismic zone regions that require additional reinforcement. It can be installed where there is minimal space between the floor framing and top of the foundation wall. The SRC can also be used to reinforce buildings in high velocity wind zones.

The two-piece design easily adjusts to foundations of varying thickness and can also be used where the sill plate may not be parallel to the face of the foundation wall.

Materials: Channel - 12 gauge, Plate - 10 gauge

Finish: G90 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek's WS6 structural wood screws are supplied with each SRC connector.
- **Contact Customer Service for offsets more than 2-1/2".**

Typical SRC installation on rectangular foundation

Typical SRC installation on trapezoidal foundation

SRC components

Recommended Installation Sequence

1) Install 5 - WS6 structural wood screws

2) Drill and install concrete anchors

MiTek Stock No.	Ref. No.	Components	Steel Gauge	Dimensions (in)		Maximum Spacing to Replace 1/2" or 5/8" Anchor Bolt	Fastener Schedule				DF/SP Allowable Load (Lbs.) ¹	Code Ref.
				W	H		Concrete ^{3,4}		Sill Plate ²			
							Qty	Dia.	Qty	Type	F1	
SRC	URFP	Channel	12	11	1-1/4	6'	2	1/2	5	WS6	1405	IBC, FL, LA
		Plate	10	11	6							

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) MiTek's WS6 structural wood screws are 1/4" dia. x 6" long and are included with each connector.
 3) Use 1/2" dia. Power-Stud® anchors with minimum 3" embedment or equivalent.
 4) Minimum concrete strength f'c = 2,500 psi.

MiTek's SRCP Sill Retrofit Connector Plate is designed as a retrofit sill-to-foundation connection that can be installed where there is minimal space between the floor framing and top of the foundation wall. The economical design is targeted for use in seismic regions and yet is also suitable for use as a supplementary connection in high wind areas.

The SRCP Sill Retrofit Connector Plate can be installed without shims anywhere the face of the sill plate is within 1/2" of the face of the foundation wall.

Materials: 10 gauge

Finish: G90 galvanizing

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- For sill plate setbacks from 1/2" to 1-1/2", install a wood shim (a minimum of 15" long) tight against the sill plate and flush with the foundation wall.

See Figure 3.

Note: For any installations with a sill plate setback, a shim plate is required to transfer load in the F3 direction.

- Install the five MiTek WS3 structural wood screws (included) in the slotted holes of the SCRCP plate, thru the shim (if applicable) and into the sill plate. MiTek's WS3 structural wood screws should be installed 3/4" above the bottom of the sill plate (i.e. centered in the narrow face for a 2x sill).
- Drill and install two 1/2" diameter Power-Stud® anchors (or equivalent) into the foundation wall. See manufacturer's literature for proper installation of post-installed anchors.

SRCP

Typical SRCP installation without shim, 1/2" max setback

Figure 1

Typical SRCP installation without shim, 1/2" max overhang

Figure 2

Typical SRCP installation with shim, 1-1/2" max setback

Figure 3

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Maximum Spacing to Replace 1/2" or 5/8" Anchor Bolt	Fastener Schedule				Installation Type	DF/SP Allowable Load (Lbs.) ¹			Code Ref.
			W	H		Concrete ^{3,4}		Sill Plate ²			F1 160%	F2 160%	F3 160%	
						Qty	Dia.	Qty	Type

										Figure 2	1560	--	360	
										Figure 3 ⁵	1560	360	360	

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with each SRCP connector.
 3) Use 1/2" diameter Power-Stud® anchors with minimum 3" embedment or equivalent.
 4) Minimum concrete strength f'c = 2,500 psi.
 5) The shim must be fastened to the sill by means other than MiTek's WS3 structural wood screws.

SFJA Foundation Anchor

Concrete & Masonry

The SFJA ties floor joists directly to foundations with bolt fastening.

Materials: 12 gauge

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- A design professional must specify anchor bolt type, length, and embedment. Anchor bolts are laterally loaded. Follow installation instructions for epoxy adhesive.

Typical SFJA installation

SFJA

MiTek Stock No.	Ref. No.	Steel Gauge	Fastener Schedule				DF/SP Allowable Loads (Lbs.) ¹		Code Ref.
			Anchor Bolts		Framing Bolts ²		Uplift 160%		
			Qty	Dia.	Qty	Dia.			
SFJA	FJA	12	1	5/8	2	5/8	1305	--	

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) All bolts shall meet or exceed the specifications of ASTM A 307.
- 3) Fasteners shall be installed to fully grouted and reinforced masonry units (CMU) type S or better mortar or reinforced concrete (f'c = 2,500 psi at 28 days).

RP Retro Plate

Uses heavy gauge HRPO steel and a large surface area to distribute seismic forces on masonry exteriors.

Materials: 3/8" plate

Finish: Primer

Options: See table for Corrosion Finish Options

Installation:

- Install with a 3/4" diameter steel threaded rod.

Typical RP6 installation

MiTek's FWAN-TZ Foundation Wall Anchor is designed to transfer in-plane and out-of-plane foundation wall loads imposed by soil through the joist/blocking into the floor diaphragm. The unique design allows for installations that straddle the joist/blocking eliminating bending stresses in the rim board that result from offset installations.

The FWAN-TZ offers two methods of installation:

1. Centered Installation

- Compatible with joist/blocking up to 3-1/2" wide
- Highest load capacities for transfer of out-of-plane loads into floor framing
- Rim board splices allowed anywhere along the wall

2. Offset Installation

- Installs in the space between the joists/blocking
- Out-of-plane loads are transferred thru the rim board into the floor framing
- Offsets up to 4"

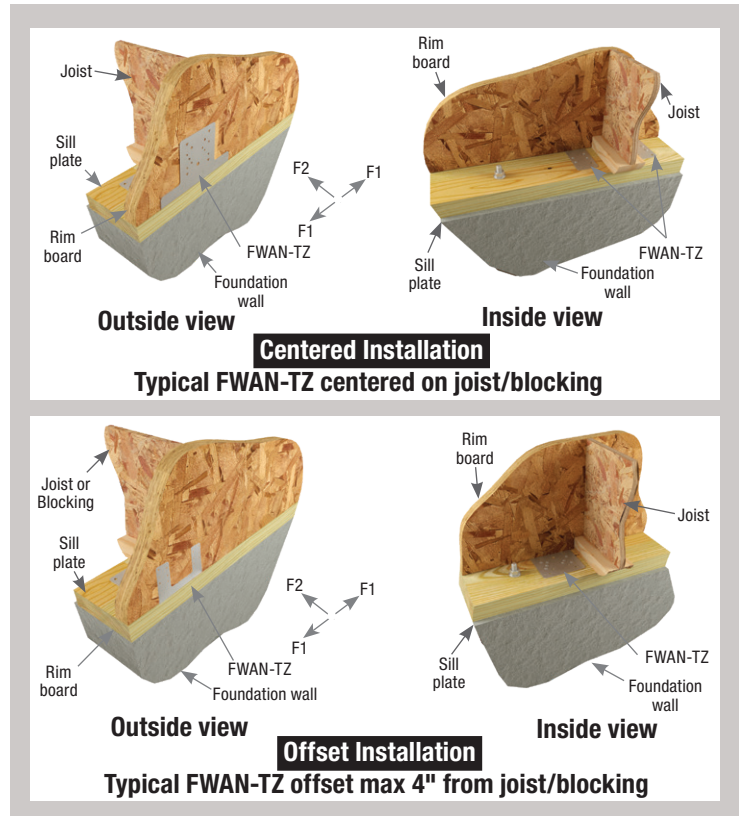

Materials: 16 gauge

Finish: G-185 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **Centered Installation** – Fill only triangle holes when nailing to the rim board.
- **Offset Installation** – Fill only diamond holes when nailing to the rim board.
- FWAN-TZ must be installed tight to the outside face of the rim board.
- Minimum sill plate thickness is 1-1/2".
- Offset Installations require that the FWAN-TZ be installed within 4" of the joist/blocking.
- For Offset Installations, install with two narrow tabs against rim board. Splices in the rim board are not permitted in the space between the joists/blocking where the FWAN-TZ is installed.
- The designer must specify the anchor bolt size, spacing and embedment necessary to transfer the foundation loads into the sill plate. Stresses in the sill plate must be considered when determining the maximum spacing of the anchor bolts.

1) Allowable loads have been reduced 10% for permanent sustained loads, no further reduction is required.
 2) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 3) F1 loads are parallel to the sill plate.

4) F2 loads are perpendicular toward the sill plate.
 5) The designer must specify the type, size and spacing of fasteners connecting the sill plate to the foundation wall.
 6) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

For installation into concrete slabs and stemwalls. The FA3 features a split flange for nailing to both mudsill and stud for greater framing versatility.

Materials: 16 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- Use a minimum of two anchors per mudsill. An anchor should always be within 12" of the end of each mudsill section.
- Do not rely on these anchors to secure concrete sections together between cold joints.
- Insert into wet concrete (minimum strength of 2,500 psi). Place mudsill after concrete cures. Secure flanges to sill (and stud, if applicable), bending flanges as needed to achieve a tight fit. Fasten as directed in table.
- For installation in severe corrosion environments, see Corrosion Information on pages 12-18.

FA4 foundation anchors can be installed as a replacement for 5/8" or 1/2" diameter anchor bolts while achieving the same load capacity.

- Materials:** 16 gauge
- Finish:** G90 galvanizing
- Options:** See table for Corrosion Finish Options
- Codes:** See table for code references

Installation:

- Install the required fasteners according to the table.
- The FA4 can be mounted to the form board before placing the concrete or inserted into the wet concrete after it is poured. See Detail A installation.
- Place the mudsill in position after the concrete cures. Secure the FA4 to the mudsill (and stud, if applicable) by bending the flanges as needed for a tight fit and nailing into place with the size and quantity of fasteners specified in the table.
- For installation in severe corrosion environments, see Corrosion Information on pages 12-18.

Prescriptive Spacing to Replace 1/2" or 5/8" Diameter Bolts

Anchor Bolt Diameter	Anchor Bolt Spacing	DF/SP 2x Mudsill O.C. Spacing				Hem-Fir 2x Mudsill O.C. Spacing			Min End Distance	Min C-C Spacing
		ASCE Seismic Design A & B		ASCE Seismic Design C-E		Wind	ASCE Seismic Design A & B			
		Wind	ASCE Seismic Design A & B	ASCE Seismic Design C-E	ASCE Seismic Design C-E					
1/2"	6'-0"	6'-0"	6'-0"	6'-0"	6'-0"	6'-0"	6'-0"	5'-1/2"	7'-1/4"	
	4'-0"	4'-0"	4'-0"	4'-0"	4'-0"	4'-0"	4'-0"	5'-1/2"	7'-1/4"	
5/8"	6'-0"	5'-4"	5'-4"	5'-4"	5'-0"	5'-0"	5'-0"	5'-1/2"	7'-1/4"	
	4'-0"	3'-7"	3'-7"	3'-7"	3'-4"	3'-4"	3'-4"	5'-1/2"	7'-1/4"	

- 1) Place anchors not more than 12" from end of each mudsill per code.
- 2) Spacing is based on parallel to mudsill load direction only.
- 3) Concrete shall have a minimum f'c = 2,500 psi.
- 4) Spacing applies to a maximum of 1 in 4 FA4 Foundation Anchors being installed to mudsill and stud.
- 5) Spacing requirements are based on lateral load capacities of anchor bolts published in the NDS.

ST1-TZ – For installation into concrete slab or poured stemwalls.
The ST1-TZ features a prebent base flange to assure proper anchoring into concrete

ST2-TZ – For installation into concrete slab, poured stemwalls or concrete/masonry.
The ST2-TZ features a prebent base flange to assure proper anchoring into concrete

Materials: 18 gauge
Finish: G-185 galvanizing

Installation:

- Install the required fasteners according to the table.
- Use a minimum of two anchors per mudsill. An anchor should always be within 12" of the end of each mudsill section. Follow spacing guidelines in table.
- Do not rely on these anchors to secure concrete sections together between cold joints.
- Spread sill flanges to mudsill width prior to insertion into wet concrete (minimum strength of 2,500 psi). Alternate installation is possible by inserting unbent flanges through 3/4" center hole pre-drilled in mudsill. Foundation anchors may also be attached to mudsill and then inserted into wet concrete. When installing ST2-TZ into concrete block, fill cells with grout with a minimum strength of 2,500 psi. Concrete block edges may need to be beveled to facilitate installation.
- ST2-TZ in masonry construction shall be installed in the core of the block and grouted with concrete grout designed for that purpose. In no case, shall they be installed in a mortar joint.
- Do not use in red clay brick.

Typical ST1-TZ installation in concrete

Alternate ST1-TZ installation with 3/4" center hole

DO NOT install ST1-TZ and ST2-TZ without pre-bending sill flanges in "Y" configuration

ST1-TZ

ST2-TZ

Alternate ST2-TZ installation with 3/4" center hole in mudsill

Plate Size	MiTek Stock No.	Ref. No.	Steel Gauge	Fastener Schedule ⁴				Min. Embed. ³ (E)	Max. Spacing ² (Feet)	DF/SP Allowable Loads (Lbs.) ¹			Corrosion Finish	Code Ref.
				Mudsill Top		Mudsill Side				Uplift	F1	F2		
				Qty	Type	Qty	Type							
				160%	160%	160%								
2 x 4 - 6	ST1-TZ	MAB15, MAB15Z	18	4	8d x 1-1/2 HDG	4	8d x 1-1/2 HDG	8-1/2"	*3'-3"	825	565	745		
	ST2-TZ	--	18	4	8d x 1-1/2 HDG	4	8d x 1-1/2 HDG	16-1/2"	*3'-3"	825	565	745		--

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) Anchor spacing and design loads assume treated Douglas Fir-Larch with Fc perpendicular @ 625 psi; replaces code prescribed 1/2" anchor bolt with standard washer, spaced 6 ft. on center.
 3) If installed in the alternate configuration, the ST1-TZ shall be embedded 7-1/4" and ST2-TZ 15".
 4) **NAILS:** 8d x 1-1/2 nails are 0.131" dia. x 1-1/2" long.
 *When a 2 x 8 mudsill is used for ST1-TZ or ST2-TZ, maximum spacing is 3 feet unless alternate installation is used.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

Embossed ends provide guides for embedment angle and depth. An embedment line is embossed on the shaft for easy installation. Features rolled threads for high tensile strength.

STB – For monolithic slabs and concrete stem walls

STBL – Designed for use with 3x sill plates.
Excellent choice for use with taller holddown washers like those in the PHD series

Materials: ASTM A 36 steel, also conforms to ASTM F1554 and ASTM A 307 Grade A requirements for bolts

Finish: None

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Select appropriate STB or STBL Anchor Bolt.
- Use normal weight concrete with minimum compressive strength of 2,500 psi.
- Minimum center-to-center spacing between bolts is 3x embedment (E) for anchors acting simultaneously in tension.
- Match embedment depth with embedment line on the STB or STBL shaft.
- The STB or STBL does not need to be tied to the rebar.
- Nuts and washers are not included.

Typical STB anchor bolt installation

Typical STB concrete block installation

Continued on next page

Monolithic or Stem Wall Foundations – Prior to pour, install the STB or STBL in an upright position and at required angle using embossed angle guide. (See illustrations.) Embossments are a guideline to position "S" shaped embedded portion of anchor away from edge or corner of wall. Install one horizontal #4 rebar at a depth of 4" (minimum).

Concrete Block Applications – Prior to cell pour, install the STB or STBL in an upright position and at required angle using embossed angle guide. (See illustrations.) Embossments are a guideline to position "S" shaped embedded portion of anchor away from edge or corner of wall. Install one horizontal #4 rebar at a depth of 4" and one vertical #4 rebar maximum 48" spacing. Fill all cells with concrete having a minimum 2,500 psi compressive strength.

AB Anchor Bolts

The AB anchor bolt provides an economical way to meet the prescriptive requirements of the 2021 IRC for securing mudsill plates to a concrete or masonry foundation. The bolt is manufactured from ASTM 1554 steel and has a hot-dip galvanized finish. A nut (ASTM A 563) and washer (ASTM F 844) are included. In some jurisdictions, a plate washer may be required. Check with your local Building Official.

Materials: Bolt: ASTM F 1554, Nut: ASTM A 563, Washers: ASTM F 844

Finish: Hot-dip galvanized

Codes: See IRC R403.1.6, IBC 2308.3.1, 2308.3.1.1, 2308.3.1.2 for minimum diameter and embedment into masonry or concrete

Installation:

- Select appropriate AB Anchor Bolt.
- Use concrete with minimum compressive strength of 2,500 psi at 28 days.
- Nuts and washers are included.
- Anchor bolts intended for use to satisfy code prescribed anchoring of mudsill plates, and shall be installed as defined in the code.
- Allowable loads shall be derived in accordance with the code.
- Plate washers may be required in some jurisdictions.

ATR All Thread Rod is a continuously threaded low carbon steel rod that may be used for anchoring MiTek's holdowns, tension ties and wood structural panel shear walls to concrete. They can also be used for many other general purpose tension transfer fastening needs.

Materials: ASTM A307 Grade A

Finish: None or Zinc Plated (See Table)

Installation:

- ATR All Thread Rod can be cast-in-place or epoxied into concrete following epoxy manufacturer's instructions.

THR Threaded Rods

THR's support the deck oriented code requirements for mechanically reinforced railing post and deck to house ledger board attachments.

Materials: ASTM A36 steel, also conforms to ASTM F1554, Grade 36
Finish: Hot-dip galvanized

Installation:

- Nut and washer included.
- Install into wet concrete with nut embedded or drill minimum 1/16" – 1/8" oversized hole depending on rod size and secure with anchor epoxy.

Typical THR installation

THR

Typical THR deck to ledger installation

ARC Anchor Rod Chairs

When attached to the forms, the ARC allows for easy and precise placement of anchor rods prior to pouring concrete. The "chair" and nut are pre-assembled for quick installation.

Features:

- Positive stop for threaded rod at the bottom of the nut
- Base allows for easy flow of concrete during placement
- Nibbled out corners allows for potentially tighter positioning on inside corner of form
- 1" stand-off base to meet code requirement for concrete cover

Materials: Nut: Heavy Hex; Chair: 16 gauge

Finish: Nut: None; Chair: Rolled Steel

Installation:

- Installs with nails or screws. Threaded rod can then be screwed in to desired depth.

Typical ARC installation

FT / WG Concrete Form Ties & Wedge

The FT form tie and WG wedge system allows concrete wall forms to be made from 2x nominal form lumber by accurately securing them in place while the concrete is poured. This product is intended for a maximum wall height of 4 feet.

FT – Connect 1x and 2x nominal form lumber in low foundation walls up to 4 feet high

WG – V-shaped wedge assures rigidity and consistent form spacing

Materials: FT – 18 gauge, WG – 14 gauge

Finish: G90 galvanizing

Installation:

- Use the Spacing Guide table to determine spacing between FT units. Each level in table assumes 12" form boards. Wall thickness from 6" to 12".
- Install with "V" facing up.
- Use (2) WG wedges for each tie. Insert wedge into inside slots for 1x nominal forms and outside slots for 2x nominal forms.
- No walers or stiff-backs are used.
- Vertical ties to keep forms from separating are not included.
- Form deflection may be substantial. Check deflection, if it is critical, and move ties to compensate.
- Forming lumber is assumed to have fb of 1,000 psi.
- **Not recommended for pours greater than 4 feet in height.**

Typical FT/WG installation

WG Wedge

must order separately

FT

Spacing Guide Table

Concrete Lift Height	Level 1		Level 2		Level 3		Level 4	
	1x	2x	1x	2x	1x	2x	1x	2x
12" or Less	2' 6"	4' 0"	--	--	--	--	--	--
12" – 24"	1' 6"	3' 0"	2' 6"	4' 0"	--	--	--	--
24" – 36"	1' 0"	2' 0"	1' 6"	3' 0"	2' 6"	4' 0"	--	--
36" – 48"	0' 9"	1' 6"	1' 0"	2' 0"	1' 6"	3' 0"	2' 6"	4' 0"

1) Factor of safety against tensile failure of tie is 1.5 or more.

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Wedge Qty	Footing Width or Wall Thickness	Code Ref.
			W	L			
FT6	WT6	18	5/8	10-5/8	2	6	--

CNW Coupler Nuts

The MiTek CNW coupler nut is designed to join threaded rods to embedded anchor rods. They are also used in the Z4 Tie Down system to attach Z-Rods together (See Z4 Product Catalog). The coupler nut has an inspection hole with an internal positive stop that allows easy verification that the ends of both rods have been fully threaded. The CNW coupler is made from low carbon ASTM A563 Grade A steel (Proof Load = 90 ksi) which makes it applicable for many common ASTM steel threaded rods of equivalent or lower strength.

Materials: ASTM A563 Grade A
Finish: Zinc Plated

Installation:

- Inspection hole is provided to assure easy inspection.
- Tighten rods until they are visible in the inspection hole.
- Works with all thread rods of specified diameter except hot-dip galvanized.

CNW

Typical CNW installation

RW Round Washers

Washers are an important component of a threaded rod assembly and should be properly sized for the intended application. They distribute load from the tightened nut and reduce bearing stresses to prevent crushing of the supporting material. This is especially important when tightening over wood.

Materials: ASTM/ANSI B18.22
Finish: None or Zinc Plated (See Table)

Concrete & Masonry

KGH Floor Girder Hangers

Concrete & Masonry

Connects girder beams to foundation walls and eliminates the need to block out pockets or inserts while forming foundation.

Materials: 12 gauge

Finish: Primer

Options: See Specialty Options Table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- H dimension assumes 2x mudsill. For 3x or larger mudsill, please contact factory.
- The 1-1/2" hole, centered in the saddle, allows for installation over any protruding foundation bolts. This is not required.
- Placement of a wood sill over the top of the KGH top flange is required to achieve allowable loads.

Typical KGH installation

KGH

Girder Size	MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)					Fastener Schedule ¹		DF/SP Allowable Loads (Lbs.)		S-P-F Allowable Loads (Lbs.)		Code Ref.

6 x 8	KGH68-8	GH68-8	12				8								

1) NAILS: 16d nails are 0.162" dia. x 3-1/2" long.

Specialty Options Table –

refer to Specialty Options pages 320-321, 324 for additional details.

Option	Skewed ^{1,2}	Saddle
Range	1° to 45°	--
Allowable Loads	100% of table load.	100% of table load per side.
Ordering	Add SK, angle required, right (R) or left (L), and square cut (SQ) or bevel cut (BV) to product number. Ex. KGH46-6_SK45R_BV	Add SA, and saddle width required to product number. Ex. KGH46-6_SA=5-1/2"

KGH saddle Specialty Option

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

KGLB – Single bolt, bearing only

KGLBT – Double bolt with structural tee provides uplift and horizontal resistance

KHGLB – Double bolt design provides uplift and horizontal resistance

Materials: Flanges – 1/4" steel
 Bearing Plate – See table for "T" dimension
 Anchor Dowels – 3/4" x 12" rebar

Finish: Primer

Installation:

- Install the required fasteners according to the table.
- Bolt holes shall be a minimum of 1/32" to a maximum of 1/16" larger than the bolt diameter.
- Concrete or masonry walls must be checked by a design professional for adequacy to resist lateral or uplift loads transferred from the beam seat anchor.

Typical KGLB installation

- 1) Beams must fully bear on plates.
- 2) The loads on concrete are based on allowable wood bearing stress perpendicular to the grain of 460 psi and actual beam width times beam bearing length.
- 3) Allowable loads have been increased 60% for wind or seismic loads and are based on bolt in wood values only. Loads assume concrete or masonry structure is adequate to resist loads in those directions.
- 4) Loads must be reduced if the allowable lateral load (F2) for masonry or concrete column governs.
- 5) Designer shall specify minimum edge and spacing requirements in masonry or concrete structure.

Concrete & Masonry

HOLD-DOWNS

HOLDOWNS

60-75

Holdowns	62-64, 66-67
Tension Ties	65, 68
Foundation Straps	69-73
Purlin Anchors	74-75

Allowable loads and deflection values for holdowns such as TD, PHD, TDX, HTT and UPHD are based on installation with the anchor bolt aligned directly below the centerline of the holdown. The maximum tolerances for anchor bolt offset are described below.

Designer should consider that installation of a holdown raised above the sill plate may result in higher deflections. These deflections are different for every installation and should be calculated by a certified designer.

Installation:

- Holdown installed at maximum of 2' above the bottom plate.
- Anchor bolt installed at maximum 2" away from the centerline of the holdown.
- Threaded rod angle must not exceed 5 degrees or a pitch of 1/12.
- A threaded coupler must be used at the anchor bolt connection capable of developing 125% of strength of the rod.

Alternate installations:

1. Install additional full-height member(s) to the existing stud(s) or post to reduce the horizontal distance between the anchor bolt and the vertical member(s).
 - Multi-ply studs/posts must be fastened together to act as a single unit. Holdown fasteners must not be considered to contribute to fastening multiple members together.
 - Added members shall be of equivalent wood species.
 - Designer must consider any effect of additional eccentricity introduced on the connection.
2. Using a threaded rod epoxied into place at the proper location in lieu of cast-in anchor bolts. These can be installed after the rough framing is completed.

Copyright © 2024 MiTek, Inc. All Rights Reserved.

PHD predeflected holdowns feature the predeflected base, minimizing deflection while providing uplift resistance. Installs with screws eliminating the need for predrilling and potential fastener slip. No thru bolts to countersink.

DTB-TZ is a light capacity holddown

Materials: See table

Finish: G90 galvanizing; DTB-TZ – G-185 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **Washer is required on DTB installations. No washer is required for the PHD.**
- Install with MiTek's code evaluated WS15-EXT (1/4" dia. x 1-1/2" long) and WS3 (1/4" dia. x 3" long) structural wood screws, which are provided with the holddown.
- Tighten anchor bolt nuts finger tight to base plus 1/3 to 1/2 additional turns with a wrench.
- **PHD Predeflected Holdowns may be installed off sill plate with no load reduction.** Reference page 62 for more information.
- The design engineer may specify any alternate anchorage calculated to resist the tension load for a specific application. Anchorage exposure length should take the bearing plate height of 1-5/8" into account, anchor bolt thread should visibly extend above nut.
- If used to anchor a built-up post, such as a double 2x4, the post component shall be designed to act as a single unit. Holddown fasteners specified shall not be considered to attach multiple plies together.
- For anchorage options see STB/STBL Anchor Bolt section on pages 51-52.

- 1) Allowable loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.
 - 2) The designer must specify anchor bolt type, length, and embedment.
 - 3) Deflections are derived from static, monotonic load tests of devices connected to DF-L wood members with specified fasteners.
 - 4) The designer shall consider the effect of compression, bearing, tension, and combined bending due to device eccentricity when applicable.
 - 5) The PHD/PHDA may be elevated off the sill and may increase deflection. Reference page 62 for more information.
 - 6) MiTek's WS15-EXT (1/4" dia. x 1-1/2" long) and WS3 (1/4" dia. x 3" long) structural wood screws are included with holdowns.
 - 7) For PHD holdowns, minimum post thickness is 3". Consult MiTek for installations less than 3".
 - 8) "CL" denotes the distance between the post and center of the anchor bolt.
- New products or updated product information are designated in **blue font**.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

Engineered for high capacity with minimum deflection and low eccentricity. Installs with screws eliminating the need for predrilling and potential fastener slip. No through bolts to countersink.

Materials: See table
Finish: Primer
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Place holdown over anchor bolt and drive screws into post.
- Tighten anchor bolt nuts finger tight to base plus 1/3 to 1/2 additional turns with a wrench.
- Holdown may be installed off of the plate with no load reduction. Reference page 62 for more information.
- If used to anchor a built-up post, such as a double 2x4, the post component shall be designed to act as a single unit. Holddown fasteners specified shall not be considered to attach multiple plies together.

1) Allowable loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.
 2) The designer must specify anchor bolt type, length, and embedment.
 3) Deflections are derived from static, monotonic load tests of devices connected to DF-L wood members with specified fasteners.
 4) The designer shall consider the effect of compression, bearing, tension, and combined bending due to device eccentricity when applicable.
 5) The UPHD may be elevated off the sill and may increase deflection. Reference page 62 for more information.
 6) Where post is consisted of multiple 2x members, members must be fastened securely together to act as one member.
 7) Minimum post thickness is 3" or greater. Consult MiTek for installations less than 3".
 8) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with UPHD models.
 New products or updated product information are designated in **blue font**.

Secures multi-ply studs or posts to foundation. Nail fastening makes for a convenient connection to studs or posts.

Materials: 10 gauge

Finish: G90 galvanizing

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- Use all specified fasteners to attach the strap portion of the connector to the side of stud, post, joist, purlin, or beam. Secure the base to the concrete or masonry wall with specified anchor bolt. A design professional shall specify the type, length, and embedment of the anchor bolt.
- HTT45 Max – Fill all round and diamond nail holes.
- Washers are not required on transfer plates that fit over the anchor bolt.
- Tighten anchor bolt nuts finger tight to base plus 1/3 to 1/2 additional turns with a wrench.
- MiTek's LL930 (#9 X 2-7/8" long) LumberLok Screws are included with HTT45KT.

Typical HTT16 installation

Typical HTT45 max installation

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) 16d sinkers may be substituted for the specified 10d common nails with no load reduction.
16d common nails may be substituted for the specified 16d x 2-1/2" nails with no load reduction.
- 3) The designer must specify anchor bolt type, length and embedment depth.
- 4) Deflections are derived from static, monotonic load tests of devices connected to DF wood members with specified fasteners.
- 5) HTT holdowns raised off of the sill plate may have higher deflection values.
- 6) HTT45KT is sold as a kit and includes (1) HTT45 and (26) LL930 screws.
- 7) **NAILS:** 10d nails are 0.148" dia. x 3" long, 16d x 2-1/2" nails are 0.162" dia. x 2-1/2" long, 16d sinkers are 0.148" dia. x 3-1/4" long.

Holdowns

TD – Different welded configurations and sizes achieve a great deal of versatility within the TD series.

TDX – The TDX2-TZ and TDX5 feature formed designs, all others are welded. All are self-jigging.

TDX features a self-jigging design with code required end distances built in. (End distance = 7 bolt diameters from the top of the sill to the center of the first bolt hole in the studs or post.)

Materials: See table

Finish: TDX5– G90 galvanizing; TDX2-TZ – G-185 galvanizing; All others – Primer

Codes: IBC, FL, LA

Patents: U.S. Patent No. 5,092,097 – TDX2-TZ

Installation:

- Install the required fasteners according to the table.
- Do not use lag bolts. Washers are not required for anchor bolts or between holdown and bolt hex head, but standard washers should be used against stud or post under the nut. See page 53 for BP/LBP Bearing Plates.
- Bolt holes should be a minimum of 1/32" to a maximum of 1/16" larger than the bolt diameter (as per NDS® specifications).
- See pages 51-52 for STB Anchor Bolt section for anchorage options. A design professional may specify alternate anchorage with conventional anchor bolts.
- A design professional shall determine the adequacy of the stud to resist published loads. Holdown fasteners specified shall not be considered to attach multiple plies together.
- Self-jigging models are designed to provide the required minimum end distance of 7 bolt diameters from the bottom of the stud or post to the centerline of the first bolt hole.
- Tighten anchor bolt nuts finger tight to base plus 1/3 to 1/2 additional turns with a wrench. Wood members may shrink over time; if possible, nut tightness should be checked periodically.
- If used to anchor a built-up post, such as a double 2x4, the post component shall be designed to act as a single unit.

Typical TDX6 installation

Moisture barrier may be required

Typical TDX2-TZ installation

TDX6

Typical TDX2-TZ back-to-back installation

Typical TD15 installation

TDX2-TZ

Holdown installation between floors

Use standard cut washer, metal plate, or metal strip between nut and stud per NDS. City of Los Angeles requires use of BP bearing plates between nut and stud.

Holdowns

Copyright © 2024 MiTek, Inc. All Rights Reserved.

- 1) Allowable loads shown are for single shear connections and may be doubled for back-to-back installations. The designer must verify post and anchor bolt capacities.
 - 2) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 - 3) The designer must specify stud or post to resist published load values.
 - 4) The designer must specify anchor bolt type, length, and embedment.
 - 5) TD models - install TD holdown raised off of bottom plate if the BH dimension is less than end distance dimension.
 - 6) Deflections are derived from static, monotonic load tests of devices connected to DF wood members and consider both the deflection of the holdown and fastener slippage.
 - 7) The designer shall consider the effect of compression, bearing, tension, and combined bending due to device eccentricity when applicable.
 - 8) The TD/TDX may be elevated off the sill which may increase deflection. Reference page 62 for more information.
- New products or updated product information are designated in **blue font**.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

LTS series – The LTS19 is designed for nail-on installation to 2x joists or studs, and the LTS20B provides a nail or bolt fastening option. The LTS20B will accommodate wood I-Joists if 10d (0.148") x 1-1/2" nails are used instead of the specified 16d nails.

LTTI31 – An open web joist tension tie designed for use with masonry or concrete construction.

Materials: See table

Finish: G90 galvanizing; LTS19-TZ – G-185 galvanizing

Codes: IBC, FL, LA

Installation:

- Use all specified fasteners to attach the strap portion of the connector to the side of stud, post, joist, purlin, or beam. Secure the base to the concrete or masonry wall with specified anchor bolt. A design professional shall specify the type, length, and embedment of the anchor bolt.
- Washers are not required on transfer plates that fit over the anchor bolt.
- LTTI31 and LTS connectors must be mounted flush to the mudsill.
- Allowable loads are based on either nail or bolt fastening; nail and bolt values cannot be combined.
- Tighten anchor bolt nuts finger tight to base plus 1/3 to 1/2 additional turns with a wrench.
- Refer to MiTek's LTS19-TZ Deck Lateral Load Connector Technical Bulletin for deck rail reinforcement at MiTek-US.com.

Typical LTS installation

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) LTS20B bolted installation requires a minimum 1-1/2" wood member thickness.
 3) 16d sinkers may be substituted for the specified 10d common nails with no load reduction.
 4) The designer must specify anchor bolt type, length and embedment depth.
 5) Deflections are derived from static, monotonic load tests of devices connected to DF wood members with specified fasteners.
 6) LTTI and LTS holdowns shall be installed tight to the sill plate.
 7) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long, 16d sinkers are 0.148" dia. x 3-1/4" long.

New products or updated product information are designated in **blue font**.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

Foundation Straps offer an economical, one-piece method of achieving a continuous load path from a 2 x 8 or 2 x 14 dimensional rim joist through concrete block to foundation. All models require a 6" embedment into concrete footings.

Materials: 12 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IRC R404.1.5

Installation:

- Install the required fasteners according to the table.
- Allowable loads are based on either nail fastening or bolt fastening; nail and bolt values cannot be combined.
- Install by inserting product into footing's wet concrete. All models require a 6" embedment into concrete foundations. Courses of concrete block must be laid over connector. Notch mudsill at connector locations. Wrap strap over rim joist and fasten.
- Do not rely on these straps to secure concrete sections together between cold joints; take other measures to transfer the load. If there is a cold joint between block and foundation, the minimum embedment must be made into the foundation.
- Based on product embedment the exposed number of fastener holes may be reduced. Using fewer fasteners will reduce allowable loads. Reduce allowable loads by the code prescribed allowable load per fastener, for each fastener not installed.
- Allowable loads are based on a minimum concrete compressive strength of 2,500 psi at 28 days.

Typical TA rim joist to foundation installation

1) Bolt values are for 3" thick rim joist loaded perpendicular to grain.
 2) Uplift loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.
 3) Minimum of (9) 16d nails per strap is required to meet IRC R404.1.5.
 4) **NAILS:** 16d x 2-1/2 nails are 0.162" dia. x 2-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

The embossments below the embedment line allow for increased concrete bonding. These holdowns retain high uplift capacity even when installed at corners of foundation stemwalls. Ideal for use with built up 2x end posts.

RJ after the model indicates LSTAD or STAD for rim joist applications as in **STAD8RJ**. Rim joist models provide for a 17" clear span without the loss of strap nailing.

Materials: LSTAD-14 gauge; STAD-12 gauge

Finish: G90 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table. The bottom (2) nails are for form board attachment only and do not contribute to fastener schedule requirements.
- Embed holddown in concrete to the embedment line (bend line).
- See illustrations for requirements on rebar, edge distances, and clear spans.
- Bending the strap horizontally 90° to facilitate wall placement may cause concrete behind the embedded strap to break away at the top edge (spalling). If the spall is 1" or less from the top edge of the concrete, no load reduction is necessary. If the spall is between 1" and 4" the allowable load is 0.90 of the published table load.
- When installing on lumber less than 3-1/2" wide, wood splitting may occur. To reduce splitting, use 10d (0.148") x 1-1/2" nails or fill every other hole with 16d (0.162" x 3-1/2") common nails. Reduce allowable loads per code requirements accordingly.
- These straps do not secure concrete sections together at cold joints; take other measures to transfer the load. If there is a cold joint between slab and foundation, the minimum embedment must be made into the foundation. Fastening opportunities may be reduced because the slab pour level may be higher than some nail holes. Using fewer fasteners will reduce allowable loads. Reduce allowable load by the code capacity for each fastener not installed.
- To achieve full table loads the minimum center-to-center spacing is twice the embedment depth (I_e) when resisting tension loads at the same time.
- Where fewer fasteners are used in the structural wood member, reduce loads according to the code.
- There may be an increase in the amount of deflection if the strap is installed on the outside of the sheathing, versus directly to the framing members.
- Strap may be bent one complete cycle to aid installation.
- For installation in severe corrosion environments, see Corrosion Information on pages 12-18.

Holdowns

- 1) Predrilled holes are not required.
- 2) Wood thickness shall be no less than 3" (2 - 2x members).
- 3) Corner and Endwall strap location implies that the distance from the wall corner or endwall end to the edge of the strap is no less than 1/2".
- 4) Midwall strap location implies that the minimum distance from the corner of the wall to the centerline of the strap is no less than 1.5 times the embedment depth (I_E).
- 5) For edge distances between 1/2" and 1.5 x I_E calculate loads using straight line interpolation.
- 6) Minimum anchor spacing for full capacity is 2 x I_E. For spacing less than that reduce capacity proportionally.
- 7) Allowable tension loads are for Doug-Fir, Southern Pine, Spruce-Pine-Fir and Hem Fir.
- 8) The strap should be fastened with nails starting from lowest pair of nail holes and working up towards the top of the strap. In many cases, not all nail holes are needed to be filled.
- 9) Minimum concrete strength f'c = 2,500 psi.
- 10) Minimum 1-#4 rebar shall be installed in the shear cone.
- 11) Deflection at highest allowable loads for installation over wood double studs are as follows:
 LSTAD8 = 0.025", STAD8 = 0.045", STAD10 = 0.051", STAD14 = 0.099".
 LSTAD8RJ = 0.032", STAD8RJ = 0.050", STAD10RJ = 0.058", STAD14RJ = 0.103".
- 12) **NAILS:** 16d sinkers are 0.148" dia. x 3-1/4" long. 10d common (0.148" dia. x 3" long) nails may be substituted with no load reduction.

Designed to anchor wood framing to poured concrete foundations.

Materials: See table

Finish: G90 galvanizing

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- Bending the strap horizontally 90° to facilitate wall placement may cause concrete behind the embedded strap to break away at the top edge (spalling). If the spall is 1" or less from the top edge of the concrete, no load reduction is necessary. If the spall is between 1" and 4", the allowable load is 0.90 of the published table load.
- When installing on lumber less than 3-1/2" wide, wood splitting may occur. To reduce splitting, use 10d (0.148") x 1-1/2" nails or fill every other hole with 16d (0.162" x 3-1/2") common nails. Reduce allowable loads in accordance with code requirements.
- Straps are to be installed at the edge of concrete. Install prior to pour by nailing to form. Drive temporary nails through lowest two nail holes into form. Concrete level should reach embedment line; minimum embedment depths are listed in table.
- Do not rely on these straps to secure concrete sections together between cold joints; take other measures to transfer the load. If there is a cold joint between slab and foundation, the minimum embedment must be made into the foundation. Fastening opportunities may be reduced because the slab pour level may be higher than some nail holes. Using fewer fasteners will reduce allowable loads. Reduce allowable load by the code capacity for each fastener not installed.
- Allowable loads based on a minimum concrete compressive strength of 2,500 psi at 28 days, with one #4 horizontal rebar in the shear cone. Rebar should be a minimum length of 2x embedment depth plus 12" (see table for exceptions in corner installations).
- Where fewer fasteners are used in the structural wood member, reduce loads according to the code.
- There may be an increase in the amount of deflection if the strap is installed on the outside of the sheathing, versus directly to the framing members.
- Strap may be bent one complete cycle to aid installation.
- For installation in severe corrosion environments, see Corrosion Information on pages 12-18.

- 1) Predrilled holes are not required.
- 2) Corner strap location implies that the distance from the corner of the wall to the edge of the strap is no less than 1/2".
- 3) Midwall strap location implies that the minimum distance from the corner of the wall to the centerline of the strap is no less than 1.5 times the embedment depth (I_E).
- 4) For edge distances between 1/2" and 1.5 x I_E calculate loads using straight line interpolation.
- 5) Minimum anchor spacing for full capacity is 2 x I_E. For spacing less than that reduce capacity proportionally.
- 6) The strap should be fastened with nails starting from lowest pair of nail holes and working up towards the top of the strap.
In many cases, not all nail holes are needed to be filled.
- 7) Minimum concrete strength f'c = 2,500 psi.
- 8) Minimum 1-#4 rebar shall be installed in the shear cone.
- 9) Deflection at highest allowable loads for installation over wood double studs are as follows:
HPAHD22 = 0.118", PAHD42 = 0.095".
- 10) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) 16d sinkers (0.148" dia. x 3-1/4" long) or 10d common (0.148" dia. x 3" long) nails may be substituted for the specified 16d common nails provided the listed allowable loads are reduced 15%.
- 3) Minimum quantity of fasteners to be installed. Product may have additional nail holes not needed to meet published allowable load of product.
- 4) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

HPA series – For installation into poured concrete walls, foundations, or masonry. The HPA is the heavy-duty version of the PA anchor.

PA series – For installation into poured concrete or concrete block walls and foundations.

PAI series – For wood I-Joist applications. An expanded 3" on-center nail spacing reduces splitting along I-Joist flange.

Materials: HPA – 10 gauge; PA / PAI – 12 gauge

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- Minimum concrete strength is 2,500 psi.
- The allowable loads for bolts are based on parallel to grain loading with a 3" minimum member thickness, except the HPA which requires a 3-1/2" thick wood member. Reduce load per code requirements when minimum member thickness is not achieved.
- Minimum concrete end/edge distance is 4" for PA / PAI series, and 6" for HPA series.
- Minimum CMU end/edge distance is 20".
- Designer may specify alternate fastening schedules. Refer to Nail Specification Table on page 26 for nail shear values. Load values shall not exceed published allowable loads.
- No anchor bolts are needed for achieving efficient stress transfer from framing to concrete walls or foundations.

Column Caps	96-101

PA / PAE / PAF / PAU Post Anchors

Caps & Bases

Post Anchors are used to secure wood posts to concrete footings. These post anchors also provide moisture damage protection and feature a 1" stand-off plate to elevate wood posts above concrete surfaces as required by building code.

PAE – 2-sided post anchors with high uplift and bearing capacity

PA – High capacity utilizing 4-sided design

PAF – Innovative one-piece design maintaining a 1" stand-off

PAU – Higher uplift resistance and optional bolt fastening to post

Materials: See table

Finish: PAU, PA, PAE – G90 galvanizing;

PAF, PA55R-TZ, PAU66R-TZ, PA66ER-TZ – G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: See table for code references

IRC R317.1.4, IBC 2304.12.2.2,

IRC R407.3, IBC 2304.10.7

Installation:

- Install the required fasteners according to the table.
- Anchor bolts, washers and nuts are not supplied with the connector.
- **For cured concrete or retrofit installations** – use specified diameter threaded rod with adhesive epoxy, following manufacturer's installation instructions.
- **Anchor bolt installation** – place specified diameter anchor bolt at desired location with minimum 4" embedment into minimum 2,500 psi concrete. A minimum 2" edge distance from the outermost edge of the post base to the edge of the concrete is required to achieve allowable loads. Tighten the anchor bolt to PAF base with nut and washer.
- **Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These anchors are not designed to resist overturning (moment) loads.**

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) All bolts shall meet or exceed the specifications of ASTM A 307.
 3) Allowable loads are based on the use of either nails or bolts; nail and bolt values cannot be combined.
 4) **NAILS:** 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.
 New products or updated product information are designated in **blue font**.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

WAS – A formed base providing a 1" stand-off with high bearing capacity.

WE – A formed, one-piece design. Includes embossing for additional lateral strength.

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

IRC R317.1.4, IBC 2304.12.2.2,

IRC R407.3, IBC 2304.10.7

Installation:

- Install the required fasteners according to the table.
- Insert into wet concrete after the pour. For the **WE**, embed the anchor so that the base plate is flush with the surface of the concrete. For the **WAS**, embed the anchor until the concrete surface meets the bottom edge of the stand off base legs. This will provide a 1" stand-off where required.
- **Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These anchors are not designed to resist overturning (moment) loads.**

Typical WAS installation

D Post Anchors

Secures nominal sized posts to wood surfaces for light-duty applications.

Materials: 18 gauge

Finish: G90 galvanizing; D44-TZ & D46R-TZ - G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- While D series post anchors offer lateral and uplift resistance, they are not recommended as a primary means of anchorage for posts in railings.
- **Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These anchors are not designed to resist overturning (moment) loads.**

Typical D installation

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

These post bases allow installers to pre-align posts and preset post heights above concrete floors or footings. By eliminating post-to-concrete contact, moisture damage is reduced. Elevated post bases are ideal for building carports, decks or porches. All series feature convenient nail fastening to post.

Materials: See table

Finish: EPB – Primer;
EBG44-TZ – G-185 galvanizing;
EPBH – Hot-dip galvanized

Options: See table for Corrosion Finish Options

Codes: See table for code references

IRC R317.1.4, IBC 2304.11.2.7, IRC R407.3, IBC 2304.9.7

Installation:

- Install the required fasteners according to the table.
- **Not recommended for fence post or other fixed post applications. These anchors are not designed to resist overturning (moment) loads.**

The EPB44T-TZ Elevated Post Base is an economical solution for supporting 4x4 posts at the minimum 1" above the concrete foundation as required by the building code. For applications where uplift loads are not present, the EPB44T-TZ can be installed directly into a hole predrilled in a pier block or concrete foundation as shown in Figure A below. To resist uplift loading, the EPB44T-TZ must be cast into concrete or epoxied into place as shown in Figure B below.

Materials: 12 gauge

Finish: G-185 galvanizing U-bracket; Hot-dip galvanized threaded rod, nuts, washers

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **Drilled Hole – No Uplift Resistance**
 - Drill 5/8" diameter hole into cured concrete 4" deep.
 - Insert threaded rod of EPB44T-TZ into hole and adjust nut to desired height.
 - Install 4x4 post and fasten with (8) 10d common nails.
- **Embedded In Concrete – Uplift Resistance Installation**
 - Adjust nut for desired height.
 - Insert threaded rod with nut and washer into wet concrete.
 - Provide temporary support to post base (if needed) to maintain vertical and horizontal position.
 - After concrete has cured, install 4x4 post and fasten with (8) 10d common nails.
- **Epoxied Into Place – Uplift Resistance Installation**
 - Install epoxy in accordance with manufacturer’s specification.
 - Insert threaded rod with nut and washer into hole, pressing down until the washer is firmly seated on the concrete.
 - After epoxy has cured, install 4x4 post and fasten with (8) 10d common nails.
- **Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These anchors are not designed to resist overturning (moment) loads.**

1) Allowable loads are based on a maximum distance of 2-1/2" between the concrete foundation and the bottom of the post base.
 2) Uplift loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.
 3) Uplift capacity requires the post base to be cast-in-place or epoxy post-installed in a concrete member capable of resisting the upward force.
 4) Download is based on the bearing of the wood in the post base and the bearing of the washer on the concrete.
 5) Minimum concrete strength f'c = 2,500 psi.
 6) Pier Block installation, drill a 5/8" diameter hole a minimum of 4" deep.
 7) Epoxy installation, install in accordance with manufacturer's specification.
 8) **NAILS:** 10d nails are 0.148" dia. x 3" long.

RPB-TZ post base attaches 4x4 or larger wood posts to concrete or wood surfaces after the post is in place. Can be installed with 1 or 2 RPB-TZs (single or double). Post may also be installed on our CPB composite post base product which provides a 1" stand off as required in untreated wood installations. Installs with concrete screws, so no more mis-installed, mis-located anchor bolts!

Materials: 12 gauge

Finish: G-185 galvanizing

Installation:

- Install the required fasteners according to the table.
- MiTek's WS structural wood screws and screw anchors are not included with RPB bases.

• Concrete Installation:

1. Place RPB-TZ over one corner of post flush to both concrete and post surfaces and mark hole locations in concrete. Place aside.
2. Drill holes for concrete screws using appropriate bit and hammer drill.
3. Place RPB-TZ in position and install with specified screw anchors as listed in table below.
4. Repeat for RPB-TZ on other side of post for double installations.

• Wood-to-Wood Installation:

1. Place RPB-TZ over one corner of post flush to wood base and post surfaces.
2. Install all specified MiTek WS structural wood screws as listed in the table below.
3. Repeat for RPB-TZ on other side of post for double installations.

• Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These anchors are not designed to resist overturning (moment) loads.

1) Allowable loads are for DF/SP 4x4, 6x6, or larger posts. For SPF/HF loads, multiply the allowable load by 0.86.
 2) Use DeWalt 3/8" x 2-1/2" Screw-Bolt™+ screw anchor; or equal, installed in accordance with manufacturer's specification. Screw anchors are not supplied.
 3) Use Powers 1/4" x 1-3/4" Tapper+ concrete screw anchor (not supplied); or equal, installed in accordance with manufacturer's specification.
 4) When installing connectors in pairs, the post must be a minimum of 2-1/2" from the edge of the concrete.
 5) Allowable loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.

6) Concrete compressive strength shall be 2,500 psi or greater at 28 days.
 7) LVL framing base shall be at least 1-3/4" thick.
 8) SP framing base shall be at least 1-1/2" thick.
 9) Allowable uplift for single RPB-TZ using WS3 structural wood screws with Screw-Bolt™+ screw anchors for concrete base with post 2-1/2" from concrete edge is 1,525 lbs.
 10) MiTek's structural wood screws and DeWalt screw anchors should be used only in interior-dry and non-corrosive environments.
 11) Use MiTek's WS15-EXT or WS3-EXT structural wood screws when installing to treated wood.

The CPB is made of corrosion resistant composite material compatible with preservative treated lumber. Provides code required 1" stand-off and can be used with rough lumber sizes.

Materials: High strength composite

Codes: IRC R317.1.4, IBC 2304.12.2.2, IRC R407.3, IBC 2304.10.7

Installation:

- Install the required fasteners according to the table.
- Attach base to post with (4) 10d HDG nails.
- Attach post to concrete using 1/2" diameter rod into concrete and extend into wood member.
- **Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These anchors are not designed to resist overturning (moment) loads.**

Typical CPB installation

CPB

Post Size	MiTek Stock No.	Ref. No.	Dimensions (in)		Bottom Surface Bearing Area	Fastener Schedule ⁵		Post Base Allowable Capacity ^{1,2}	Concrete Design Bearing Strength ^{3,4}	Code Ref.
			W1	W2		Qty	Type

8 x 8	CPB88	CPS7	7-1/4	7-1/4	6.4	4	10d HDG	12490	19040	

1) Loads shall not be increased for short-term loading.

2) Loads require a minimum 650 psi wood compressive strength.

3) Concrete Design Bearing Strength = $\phi (0.85 f'_c A_1)$ with $f'_c = 2,500$ psi. ACI 318-14, Section 22.8.3.

4) Design Bearing Strength has been increased assuming $(A_2 / A_1)^{0.5}$ per ACI 318-14, Section 22.8.3.

5) **NAILS:** 10d nails are 0.148" dia. x 3" long.

These column bases install using MiTek's WS2-EXT structural wood screws, reducing installation time and cost. Designed for high uplift in high wind or seismic applications. Includes a stand-off plate to protect the wood from ground contact moisture as required by building code.

Materials: See table

Finish: G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: IRC R317.1.4, IBC 2304.12.2.2, IRC R407.3, IBC 2304.10.7

Installation:

- Install the required fasteners according to the table.
- MiTek's WS2-EXT structural wood screws, 1/4" dia. x 2" long, are supplied with CBSQ Bases.
- Maintain 3" minimum edge distance between post and edge of concrete.
- Embed the column base until the concrete surface meets the bottom edge of the stand-off plate.
- **Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These bases are not designed to resist overturning (moment) loads.**

Typical CBSQ installation

Caps & Bases

High capacity column base fastens to column with MiTek's WS structural wood screws.

Materials: 10 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IRC R407.3, IBC 2304.10.7

Installation:

- Install the required fasteners according to the table.
- MiTek's WS2 structural wood screws, 1/4" dia. x 2" long, are supplied with KCBQ Column Bases.
- Maintain 3" minimum edge distance between post and edge of concrete.
- Embed column base with bottom of base plate flush to concrete.
- **Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These bases are not designed to resist overturning (moment) loads.**

 4) "Specify" denotes the required width that must be specified at the time of ordering.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

Provides high structural capacity and installs with bolts providing an architectural appearance.

Materials: See table

Finish: KCB (5/8" bolt models) – G90 galvanizing;
KCB (3/4" bolt models) – Primer

Options: See table for Corrosion Finish Options

Codes: IRC R407.3, IBC 2304.10.7

Installation:

- Install the required fasteners according to the table.
- Maintain 3" minimum edge distance between post and edge of concrete.
- KCB column bases feature diamond holes for temporary nail fastening to facilitate drilling and bolting.
- Embed column base with bottom of base plate flush to concrete.
- **Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These bases are not designed to resist overturning (moment) loads.**

BC – One-piece design for double 2x's to a 4x post

BCS – One-piece design connects 2-ply or 3-ply beams to the tops of 4x4 or 6x6 post. Slant nailing reduces the amount of nails required

C – One-piece design

Materials: 18 gauge

Finish: G90 galvanizing;
BC400-TZ – G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: See table for code references

Typical BC400-TZ installation

Typical BCS23-6 installation

Typical C44 installation

Installation:

- Install the required fasteners according to the table.
- Place post cap on top of post and fasten cap to post using specified nails.
- Place beam between top flanges of the cap and install all specified nails into beam.
- **BCS** – Slant nails must be installed through dimple holes at a 30° to 45° angle through the beam into the post to achieve listed loads. **Slant/double shear nails must be used to achieve listed load values.**

PB – Two-piece design

PBES / PBS – Two-piece design with extended side plates and wrap around post design. Easy retrofit installations

Materials: 18 gauge

Finish: G90 galvanizing; PB44-6TZ & PB66-6TZ – G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- These products are designed for single, solid-sawn beams with matching post width. Multi-ply beams must have same width as post. Use shims as required.
- PB, PBES, PBS post caps are sold per piece and must be installed in pairs to achieve allowable loads.

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

2) Allowable Loads and Fastener Schedules for a pair of post caps.

3) NAILS: 16d nails are 0.162" dia. x 3-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

The PBC series is a one-piece connector designed to secure two mitered beams on a corner post while providing uplift capacity.

Materials: 18 gauge

Finish: G-185 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Install PBC on outside corner of post forming tabs to inner side of post.
- Assumes beam members are bevel cut at corner.

Typical PBC installation

PBC

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

Lally Column Caps connect lally columns to wood beams. Fits 3-1/2" and 4" diameter lally columns.

Materials: 12 gauge

Finish: Primer

Installation:

- Install the required fasteners according to the table.
- Fit KLCC onto lally column. Position wood beam in KLCC saddle and fasten.

Typical KLCC installation

KLCC

- 1) Loads may not be increased for short-term loading.
- 2) Loads are for a continuous beam.
- 3) Allowable loads are determined using the lowest of the bearing loads. Use Fc-perp equal to 425 psi for SPF, 625 psi for DF and 700 psi for LVL/PSL, or the lally column capacity.
- 4) Spliced conditions must be detailed by the designer to transfer tension loads between spliced members by means other than the lally column. The splice condition load is 6750 lbs. per beam side and the lally cap must be evenly loaded.
- 5) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

PCM – Provides a positive connection for medium-duty, post-to-beam applications

EPCM – End column caps

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- PCM 16 gauge post caps should not be substituted for PCM 12 gauge post caps unless approved by the design professional.

Typical PCM46 center cap installation

Typical EPCM end cap installation

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

Corrosion Finish ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

Designed to be installed without the need to drill bolt holes, simplifying installation and maintaining the wood cross section. Installs with MiTek's WS structural wood screws offering high uplift capacity.

KCCQ – Standard column cap

KECCQ – End column version

Materials: See table

Finish: Primer

Options: See table for Corrosion Finish Options and Specialty Options on page 98.

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek's WS3 structural wood screws, 1/4" dia. x 3" long, are supplied with Column Caps.
- Beams shall be designed to support the required loads. Beam shear may limit loads to less than listed loads for device. A design professional shall determine the adequacy of the post to resist published loads.

Caps & Bases

Copyright © 2024 MiTek, Inc. All Rights Reserved.

- 1) Bearing loads are based on 625 psi perpendicular to grain loading; no further increase for duration of load is permitted.
- 2) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 3) MiTek WS3 structural wood screws are 1/4" dia. x 3" long and are included with KCCQ and KECCQ column caps.
- 4) Beams shall be designed to support the required loads. Beam shear may limit loads to less than listed loads for device.
- 5) The designer shall check post for required loads.
- 6) Spliced conditions must be detailed by the specifier to transfer tension loads between spliced members by means other than the column cap.
- 7) Uplift loads do not apply to splice conditions.

Specialty Options:

- **KCCQ/KECCQ** – Straps may be rotated 90° with no reduction in published capacity on special orders where the W2 dimension is less than or equal to the W1 dimension. When W2 is greater than W1 uplift loads may be reduced, consult MiTek Engineering support.
- **KCCQO/KECCQO** – Cap only, no strap design for field welding to pipe or other columns.
- **KCCQOB** – For cross beam connections. Any two buckets can be welded together for a wide variety of applications. Allowable load shall be the lesser of the two components.
- **KCCQT** – For T beam intersections, consult MiTek. Specify beam/column conditions, dimensions, and loading requirements.
- **KCCQC** – For X beam intersections, consult MiTek. Specify beam/column conditions, dimensions, and loading requirements.
- **KECCQL** – For L beam intersections, consult MiTek. Specify left (L) or right (R) beam/column conditions, dimensions, and loading requirements.

KCC – Standard column cap.

KECC – End column version.

Materials: See table

Finish: Primer

Options: See table for Corrosion Finish Options.

See page 101 for Specialty Options.

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Bolt holes should be a minimum of 1/32" to a maximum of 1/16" larger than the bolt diameter.
- Beams shall be designed to support the required loads. Beam shear may limit loads to less than listed loads for device. A design professional shall determine the adequacy of the post and beam to resist published loads.

Specialty Options:

- **KCC/KECC** – Straps may be rotated 90° on special order where the W2 dimension is less than or equal to the W1 dimension. Unless specified W3 and W4 dimensions are equal to the W1 dimension, and H2 and H3 dimensions are equal to the H1 dimension.
- **KCCO/KECCO** – Cap only, no strap design for field welding to pipe or other columns.
- **KCCOB** – For cross beam connections. Any two buckets can be welded together for a wide variety of applications. Allowable load shall be the lesser of the two components.
- **KCCT** – For T beam intersections, consult MiTek. Specify beam/column conditions, dimensions, and loading requirements.
- **KCCC** – For X beam intersections, consult MiTek. Specify beam/column conditions, dimensions, and loading requirements.
- **KECCL** – For L beam intersections, consult MiTek. Specify left (L) or right (R) beam/column conditions, dimensions, and loading requirements.

Dimension call-outs not shown in the table must be specified at time of ordering for specialty options, non-catalog, or rough/full size lumber sizes.

ANGLES & STRAPS

ANGLES & STRAPS

102-131

Angles	104-107, 109-111
Clips	108, 114
Stud Plate Ties	112-113
Header Hangers	114
Ties	115
Lateral Joist Connectors	116
Straps	117-130
Ornamental Connectors	122
Knee Braces	131

A / AC / JA / MP Framing Angles

Angles & Straps

MP34 – 18 gauge. Framing angle for 90° connections

A3 – 18 gauge. Eliminates toenailing and increases strength

AC – 16 gauge. Features staggered nail patterns which reduces wood splitting and allows installation on both sides of the supported member

JA – 14 or 16 gauge. Heavier capacity framing angle for joist support

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Typical MP34 joist / header installation

MP34

Installation:

- Install the required fasteners according to the table.

MP / MPA / MPF Multi-Purpose Framing Angles

Angles & Straps

MP – Field adjustable from 45° to 180° (flat)™

MPA1 – Tabs enable two and three-way connections

MP4F – Connects 2x framing with floor sheathing up to 5/8"

MP6F – Connects 3x framing with floor sheathing up to 3/4". Better choice for connections where floor sheathing is between sole plate and rim board

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MP Framing Angles are fabricated at 100° and may be field adjusted by hand from 45° to 180° (flat).™
- Bend tabs only once.

RBC Roof Boundary Clip

Angles & Straps

Framing plate designed to connect roof blocking to top of the wall.

Materials: 20 gauge

Finish: G90 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Field adjustable from 0° to 45°.
- **Bend angle only once.**

Typical RBC top-plate to inside of blocking installation

Typical RBC concrete block wall to blocking installation

RBC

Typical RBC top-plate to outside of blocking installation

Typical RBC 1" foamboard installation

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Installation Type	Fastener Schedule ^{3,4}				DF/SP Allowable Loads (Lbs.) ^{1,2}	S-P-F Allowable Loads (Lbs.) ^{1,2}	Code Ref.

					CMU	3	1/4" Tapcon	6	10d x 1-1/2	425	370	

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

2) Loads shown are for a single roof boundary clip.

3) Use ITW-Buildex 1/4" x 2-1/4" Tapcons; or equal, installed in accordance with manufacturer's specifications.

4) **NAILS:** 10d x 1-1/2 nails are 0.148" diameter by 1-1/2" long.

ML Angles

Angles & Straps

ML angles are multi-purpose angles that install easily with MiTek's WS15-EXT structural wood screws. The staggered fastener pattern allows for back-to-back installations.

Materials: 12 gauge
Finish: G-185 galvanizing
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek WS15-EXT structural wood screws (1/4" dia. x 1-1/2" long) are not supplied with ML angles.

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Fastener Schedule ^{2,3}			DF/SP Allowable Loads (Lbs.) ¹				S-P-F Allowable Loads (Lbs.) ¹				Corrosion Finish	Code Ref.
			W	H	Header Qty	Joist Qty	Type	F1				F1					
								100%	115%	125%	160%	100%	115%	125%	160%

1) Allowable loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.
 2) MiTek's WS15 structural wood screws are 1/4" dia. x 1-1/2" long and are not included with angles.
 3) For interior applications, use MiTek's WS15 structural wood screws with yellow zinc finish.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

TDL Concrete Angles

These angles secure wood posts to concrete or wood floors in light-duty applications.

Materials: 12 gauge
Finish: G90 galvanizing
Options: See table for Corrosion Finish Options

Installation:

- Install the required fasteners according to the table.
- The TDL10 can be embedded into concrete. Minimum embedment depth is 4" to achieve allowable loads.
- **Moisture barrier may be required.**

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)			Fastener Schedule		DF/SP Allowable Loads (Lbs.) ^{1,2,3}				Corrosion Finish	Code Ref.		
			W	H	D	Anchor Bolt ⁴		Strap		Uplift 160%					
						Qty	Dia. (in)	Qty	Type ⁵						
TDL5	A24	12	2	5-3/16	2-1/4	1	1/2	4	16d	955				■	--
								1	1/2 bolt	1105					
TDL10	A311	12	2	9-3/4	2-1/4	1	1/2	4	16d	955				■	--
								1	1/2 bolt	1105					

1) Allowable loads are based on the use of either nails or bolts; nail and bolt values cannot be combined.
 2) The bolt values are based on single shear with a minimum member thickness of 3-1/2".
 3) Allowable loads have been increased in accordance with the code; no further increase shall be permitted.
 4) Designer must specify anchor bolt type, length, and embedment.
 5) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

Angles & Straps

B / BL Corner Braces

Angles & Straps

These multi-purpose braces are designed to provide reinforcement for 90° wood-to-wood connections.

Materials: 12 gauge
Finish: G90 galvanizing
Codes: IBC, LA

Some model designs may vary from illustration shown

Installation:

- Install the required fasteners according to the table.

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Fastener Schedule ⁴				DF/SP Allowable Loads (Lbs.) ^{1,2}		Code Ref.

BL4

B66

B23

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Loads shown are for a single corner brace.
- 3) Corner braces are required on both sides to achieve F1 loads in both directions.
- 4) Minimum member thickness is 3".
- 5) Bolts shall conform to ASTM A 307 or better.
- 6) **NAILS:** 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

KHL Heavy Angles

Designed for heavy-duty reinforcement of 90° framing intersections.

Materials: See table
Finish: Primer
Options: See table for Corrosion Finish Options

Installation:

- Install the required fasteners according to the table.
- **Connectors are not load rated.**

Typical KHL35 installation

1) Loads based on use of (2) 1/2" x 2-1/2" lag screws, loaded parallel to grain, in Douglas Fir-Larch (G=0.50).

SCA Stair Angles

Stair angles simplify stair construction. There is no need to calculate and notch stair stringers. Stronger and safer than wood blocking, and the angle and fasteners are hidden from view.

Materials: 12 gauge

Finish: G-185 galvanizing

Installation:

- Install the required fasteners according to the table.
- MiTek WS15-EXT (1/4" dia. x 1-1/2" long) structural wood screws are not supplied with SCA angles.
- Use the SCA9-TZ for single 2x10 stair treads. Use the SCA10-TZ for double 2 x 6 stair treads.
- To calculate stair construction do the following:
 1. Find the number of steps needed by dividing the vertical drop in inches from the deck surface to grade by 7. Round off to the nearest whole number.
(Ex: Vertical drop of 39" divided by 7" equals 5.57 rounded off is 6)
 2. Find the step rise by dividing the vertical drop by the number of steps (39" divided by 6 = 6.5")
 3. Find the step run by measuring the depth of your tread board
(Ex: (2) 2x6s with 1/4" gap will have a run of 11-1/4")
 4. Find the stairway span by multiplying the run by the number of treads minus one (Ex: 11-1/4" x 5 = 56-1/4")
- Using the above calculations, mark stair angle locations on each stringer. Attach a stair angle to the inside of each stringer at the marked locations. Attach stringers to deck rim joist and railing posts. Position tread-boards on angles and fasten from below.

RSPT – 18 or 20 gauge

SPT – 20 gauge

TSP – 16 gauge. Optional diamond holes for various uplift capacities with Min and Max nailing configurations

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **TSP Min Nailing** – Fill all round holes.
- **TSP Max Nailing** – Fill all round and diamond holes.
- HDG nails may be required when fastening to treated sill plates.

Typical RSPT6-2 installation

Typical RSPT4 single plate installation

Typical TSP top plate installation (max nailing)

Typical SPT24 installation

Typical RSPT4 double plate installation

Typical TSP mudsill installation (min nailing)

SPT / SPTH / SPTHW Stud Plate Ties

Angles & Straps

SPT – Ties single and double plates to studs

SPTH – Heavier version of SPT

SPTHW – Attaches plate to studs over 1/2" structural sheathing

Materials: SPT – 20 gauge, SPTH / SPTHW – 18 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.

Typical SPTHW installation

Typical SPT4 installation

SPTHW

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

2) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

Typical SFC6 installation

SFC6

HH Header Hangers

Header Hangers support headers in door and window framing and help eliminate cracks in drywall, plaster, or stucco over windows and doors. These products also provide anchorage and support for heavy fence rails, struts, or gate post cross brackets.

Materials: 16 gauge

Finish: G90 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.

SDPT Strap Post Ties

Connects 2x4 stair posts and 4x4 posts to deck rim joist or stair stringers.

Materials: 14 gauge
Finish: G-185 galvanizing

- Installation:**
- Install the required fasteners according to the table.
 - Install units in pairs on 2x4 (SDPT5-TZ) or 4x4 (SDPT7-TZ) post. Space the connectors 5" apart from center to center on the post. Use through bolts to fasten connectors to rim joist or stringer. Do not use lag bolts.
 - **Connectors are not load rated.**

Typical SDPT7-TZ installation

1) Bolts shall conform to ASTM A 307 or better.
 2) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

SDJT Joist Tie

Secures 2x joists to posts.

Materials: 14 gauge
Finish: G-185 galvanizing

- Installation:**
- Install the required fasteners according to the table.
 - Use with 2x lumber for joists (minimum height is 2x4). Install with either specified nails or through bolts. Do not use lag bolts. To ease installation, attach to 4x4 post first.

Typical SDJT14-TZ installation

LJC / LJQ Lateral Joist Connectors

Angles & Straps

The LJC-TZ and LJQ-TZ Lateral Joist Connectors transfer lateral loads at the top foundation to the floor joists. The fastening patterns meet I-joist manufacturer recommendations.

LJC-TZ – fastens the top side of the sill plate to the underside of the floor joist preventing splitting of the bottom chord flanges, and can be installed after the floor system has been installed. The product is load rated for use with dimensional lumber floor joists as well as I-joist. It can also be used with cantilevered floor joists.

LJQ-TZ – is a higher capacity connector designed for higher loads. It is similar in design to a joist hanger with a seat for the floor joist to bear against and utilizes wood screws to fasten to the sill plate. MiTek's WS15-EXT structural wood screws (included) provide quick installation without the need to predrill holes.

Materials: See table

Finish: G-185 galvanizing

Installation:

- Install the required fasteners according to the table.
- **LJC-TZ** – Installs after the floor joist has been placed with a minimum of (12) 8d (0.131") x 1-1/2" HDG nails.
- **LJQ35-TZ** – Installs with (4) MiTek WS15-EXT structural wood screws. WS15-EXT structural wood screws are 1/4" dia. x 1-1/2" long and are included with connectors.

Typical LJC-TZ installation

Typical LJQ35-TZ installation

LJC-TZ

HRS – 12 gauge, 1-3/8" or 3-1/4" wide strapping

LSTA – 20 or 18 gauge, light-capacity 1-1/4" wide strapping

LSTI – 3-3/4" wide strap ties provide tension load path for truss top chords. The nail pattern accommodates open web trusses with double top chord

MSTA – 18 or 16 gauge, medium-capacity 1-1/4" wide strapping

HTP – 16 gauge, medium-capacity 3" wide strapping

ST – 16 gauge, medium-capacity 1-1/4" wide strapping

MSTC – 3" wide strapping. Slotted hole design allows for higher load capacities and reduces splitting of lumber when attached to multiple 2x members

KST – 3/4" or 2-1/16" wide strapping. Straps can be fastened using either nails or bolts. Some KST straps install only with nails

KSTI – 2-1/16" wide strapping. Straps are designed for installation to wood I-Joist flanges

Some model designs may vary from illustration shown

KST scalloped design **KST straight edge design** **HTP37-TZ** **HRS416-TZ** **HRS**

LSTA/MSTA **KSTI** **MSTC** **LSTI** **KST116** **ST**

Angles & Straps

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- Designer may specify alternate nailing schedules. Refer to Nail Specification Table on page 126 for nail shear values.
- The quantity of nails installed shall be equally distributed to both ends of the strap.
- Unless specified otherwise by the panel manufacturer, straps may be installed over wood structural panels. Use full length nails of specified nail diameter to ensure adequate penetration into the main member is achieved (10 times the diameter minimum).

Typical LSTA/MSTA I-Joist on ridge beam installation

Typical LSTI open web truss installation

Typical KST237 floor-to-floor installation

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Total quantity of nails used.
- 3) **NAILS:** 10d x 1-1/2" nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

Coiled strapping enables cut-to-length convenience for a variety of immediate job site needs.

CMST – 3" wide strapping features diamond nail holes to provide nailing options and reduce wood splitting

CMSTC – 3" wide strapping is engineered to reduce wood splitting

RS – 1-1/4" wide strapping packaged in cartons containing 25-foot or longer coils

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options and Strap Lap Splice information on page 121

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- For safety, always wear gloves when handling or cutting coiled strapping.
- **CMST/CMSTC** installations: Install to a minimum 2-ply 2x edge. Increase nail spacing if wood begins to split.
- Designer may specify alternate nailing schedules. Refer to Nail Specification Table on page 26 for nail shear values. Load values shall not exceed published allowable loads.
- Unless specified otherwise by the panel manufacturer, straps may be installed over wood structural panels. Use full length nails of specified nail diameter to ensure adequate penetration into the main member is achieved (10 times the diameter minimum).

Strap Lap Splice Table

Multiple straps can be used as a single tension member by overlapping the straps and aligning the fastener holes. See table below for minimum splice length and fasteners needed to transfer the straps maximum tensile capacity.

MiTek Stock No.	Steel Gauge	Fastener Type ³	Strap Lap Splice ²	
			Minimum Fasteners per Splice ¹	Minimum Splice Length (in)
CMST12	12	10d	33	30
		16d	27	25
CMST14	14	10d	23	21
		16d	20	19
CMSTC16	16	10d	17	14
		16d	14	11
RS150	16	8d	8	6
		10d	6	5

- 1) All fasteners must be installed in existing nail holes.
- 2) Minimum edge distance and end distance must be followed per applicable code.
- 3) **NAILS:** 8d nails are 0.131" dia. x 2-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

L / LH / T / TH Straps

Angles & Straps

L / T – 14 gauge medium-capacity straps fasten with either nails or bolts

LH / TH – 7 gauge heavy-capacity bolt-on strap

Materials: See table

Finish: G90 galvanizing; LH / TH – Primer; TH12-HDG – Hot-dip galvanized

Options: See table for Corrosion Finish Options. Available for special order in black primer coated finish.

Installation:

- Install the required fasteners according to the table.
- **Straps are not load rated.**

L12-0

Some model designs may vary from illustration shown

KHL33-0

The MSTCB Pre-Bent Strap is designed to fasten vertical studs to a beam or ridge beam member below where the beam depth will not allow complete fastener attachments with a standard product.

Materials: 14 gauge

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.

MiTek Stock No.	Ref. No.	Steel Gauge	L (in)	Min. Beam Dimensions (in)		Fastener Schedule ⁵					DF/SP Allowable Loads (Lbs.) ¹	S-P-F Allowable Loads (Lbs.) ¹	Code Ref.
						Beam			Stud/Post ^{2,3,4}				
						W	D	Face Qty	Bottom Qty	Type	Qty	Type	
MSTC48B3	MSTC48B3	14	44-7/8	3	9-1/4	12	4	10d	24	10d	4800	3905	--
MSTC66B3	MSTC66B3	14	62-7/8	3	11-1/4	14	4	10d	28	10d	5375	4250	--

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) The 3" wide beam may be 2-ply 2x member.
- 3) Fewer fasteners in the stud/post than listed will reduce the capacity of the connection.
- 4) Nails in the stud/post to be installed symmetrically in pairs starting a minimum of 1-1/2" from the end.
- 5) **NAILS:** 10d nails are 0.148" dia. x 3" long.

The HFS Hardy Frame® Saddle is a 14 gauge steel channel intended to be used as a splice at locations where plumbing or other vertical penetrations destroy the structural integrity of a wall's top plates.

Materials: 14 gauge

Finish: G60 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- The Saddle can be installed over the top or from the underside of the top plates, and is capable of resisting both tension and compression loads in a clearspan of up to 4-1/2".
- For wall depths greater than 3-1/2", or to install after plumbing lines have been run, the product can be separated into two "L" shapes by gripping the legs of the channel and flexing the top surface along the serration lines.

Typical HFS installation to underside of double top plates.

Separation into two "L" shapes at 6" and greater depths

Omit fasteners at first holes when the end distance is less than 1"

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Notch Width	Fastener Schedule		DF/SP Allowable Loads (Lbs.) ^{1,3}		S-P-F Allowable Loads (Lbs.) ^{1,3}		Code Ref.
			W	L		Qty ²	Type ⁴	Tension 100%	Compression 100%	Tension 100%	Compression 100%	
HFS24	--	14	3-5/8	24	≤ 4-1/2	24	16d	2950	2500	2537	2500	IBC, FL, LA
HFS36	--	14	3-5/8	36	≤ 4-1/2	32	16d	4280	2500	3681	2500	

- 1) Allowable tension loads are for normal duration. The values may be adjusted for other durations, such as for seismic and wind loading in accordance with the NDS.
- 2) Fastener quantity is the number of 16d common nails to be installed into each of the members to be joined. When the end distance from the clear span the first nail hole is less than 1", omit the (2) nails in the 3" side-plate and the (1) nail in the 1-1/2" side-plate that are nearest the clear span.
- 3) There is no reduction in double top plate capacity provided the HFS24 is installed with minimum (22) 16d common nails in each member being joined (44 total) and the HFS36 is installed with (31) 16d common nails in each member (62 total).
- 4) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

Twist straps tie framing members to resist tension forces.

LFTA6 – 16 gauge

LTW – 18 gauge, light-capacity

MTW – 16 gauge, medium-capacity

KTS – 16 gauge, medium-capacity with angled twist

HTW – 14 gauge, heavy-capacity

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- Consult I-Joist manufacturer for web stiffener requirements, and uplift limitations on joist and application.

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) 10d (0.148") x 1-1/2" nails can replace 10d nails and 16d (0.162") x 2-1/2" nails can replace 16d nails with no load reduction.
 3) Fasteners shall be distributed equally on each end of the connection.
 4) "C" after the model number designates center twist as in MTW30C.
 5) LFTA6: F1 is 745 lbs and F2 is 120 lbs. To achieve F1 lateral loads, three nails must be installed on each side on the strap located closest to the bend line. Lateral F1 and F2 load directions do not apply to roof truss-to-top plate installations.
 6) **NAILS:** 8d x 1-1/2" nails are 0.131" dia. x 1-1/2" long, 8d nails are 0.131" dia. x 2-1/2" long, 10d x 1-1/2" nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

KHST / KRPS / PS Strap Ties

Angles & Straps

KRPS – Meets IBC, IRC, & City of Los Angeles requirements for notched plates where pipes placed in partitions

PS – Piling Straps connect wood pilings to floor girders

KHST – Heavy-capacity strap that utilizes bolts

Materials: See table

Finish: KHST – Primer; KRPS – G90 galvanizing; PS – Hot-dip galvanized

Options: See table for Corrosion Finish Options

Codes: See table for code references
IRC R602.6.1, IBC 2308.5.8

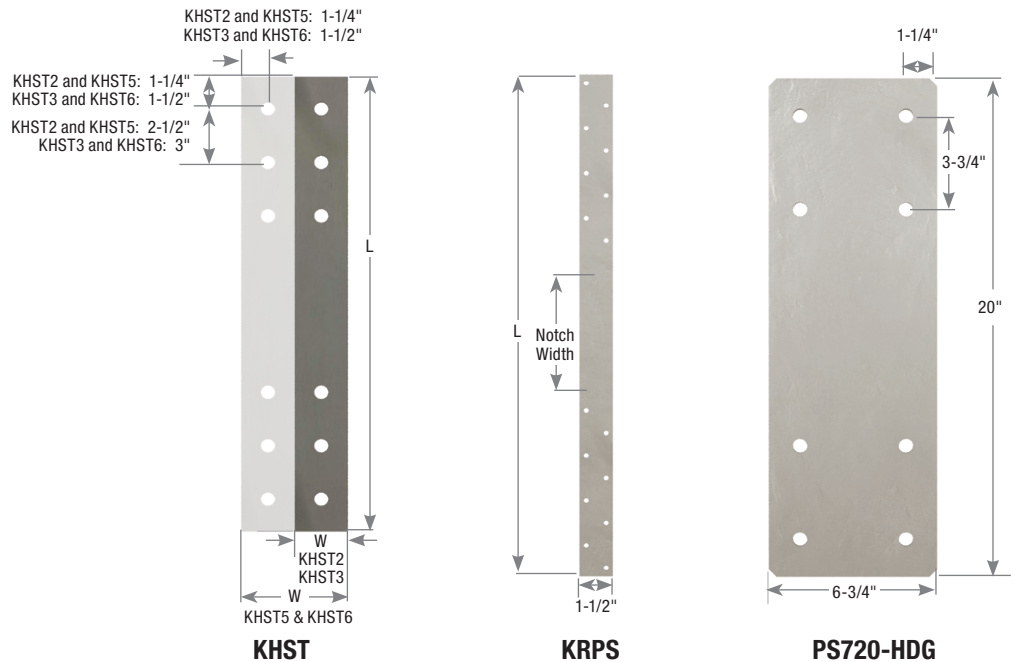

Typical KRPS installation

Typical PS720-HDG installation

Installation:

- Install the required fasteners according to the table.
- Install one strap tie for each 2x plate.

Angles & Straps

PS218-HDG (PS418-HDG similar)

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) Allowable loads are based on single shear, parallel to grain loading with a 3-1/2" minimum member thickness for KHST2 and KHST5, and 4-1/2" minimum member thickness for KHST3 and KHST6.
 3) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

The MSTAM and MSTCM Strap Ties are designed to connect a wood structure above to a masonry wall below.

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: FL

Installation:

- Install the required fasteners according to the table.

Typical MSTCM40 installation

MSTCM40 (MSTCM60 similar)

Typical MSTAM36 installation

- 1) Use ITW Buildex 1/4" x 2-1/4" Tapcon fasteners; or equal, installed in accordance with manufacturer's specification.
- 2) Allowable loads are derived from tests performed using grout-filled ASTM C90 concrete block.
- 3) **NAILS:** 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

The HTWM Twist Straps are designed for truss to concrete or masonry connections. Offers uplift resistance with variable heel height and positioning applications.

Materials: 14 gauge
Finish: G90 galvanizing
Codes: FL

Installation:

- Install the required fasteners according to the table.
- Strap may be attached to either side of grouted masonry or concrete wall with a minimum of (1) #5 horizontal rebar.
- Twist straps do not have to be wrapped over the truss to achieve the allowable loads.
- **Moisture barrier may be required.**

Typical HTWM installation

HTWM

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)			Fastener Schedule				DF/SP Allowable Loads (Lbs.)	S-P-F Allowable Loads (Lbs.)	Code Ref.

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Use DeWalt 1/4" x 1-3/4" Screw-Bolt™+; or equal, installed in accordance with manufacturer's specification.
- 3) DeWalt 1/4" x 1-3/4" Screw-Bolt™+ are not supplied with HTWM straps.
- 4) Grout or concrete compressive strength shall be 2,500 psi or greater at 28 days.
- 5) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

KHSA / KSA Connector Straps

Angles & Straps

KSA – Seismic horizontal tension tie

KHSA – Designed for installation with bolts

Materials: KSA – 12 gauge; KHSA – 3 gauge

Finish: KSA – G90 galvanizing;
KHSA – Primer

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- KSA36 can be field adjusted for smaller beam widths.

Typical KSA installation

Typical KHSA4 installation

Typical KSA installation

KSA36

KHSA5

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)				Fastener Schedule ^{3,4,5}		DF/SP Allowable Tension Loads (Lbs.) ^{1,2}	Code Ref.
			W	L	D1	D2	Qty	Type		
									160%

KHSA5	--	3	3-1/2	64-1/2	10	4-1/2	10	3/4 Bolt	10785	

- 1) Allowable loads are based on the use of either nails or bolts; nail and bolt values cannot be combined.
- 2) Bolt values assume wood member thickness of 3-1/2" with bolts in single shear.
- 3) Bolts shall be loaded parallel to grain.
- 4) All bolts shall meet or exceed specifications of ASTM A 307.
- 5) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

KVB / KVBI Knee Braces

Angles & Straps

KVB – Installs with MiTek’s WS3 structural wood screws for higher load capacity. It can be retrofit into existing framing

KVBI – Installs with common nails. Designed to be used with I-Joist purlins

Materials: 12 gauge
Finish: G90 galvanizing
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek’s WS3 structural wood screws are included with KVB shipments.
- Install flanges at angles of 45° or more to the vertical plane to ensure proper lateral resistance.

Typical KVB7 installation

KVB5

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Fastener Schedule ^{3,4}				DF/SP Allowable Tension Loads (Lbs.) ¹			Code Ref.

• Represents common applications and product configurations.
 1) When an I-Joist is used as a header, designer must evaluate if a web stiffener or backer block is required.

MiTek offers a wide variety of light-gauge face mount joist hangers to accommodate application and installation preferences.

JL series – 20 gauge, 2x dimensional joist hangers

JLIF series – 18 gauge, 2x dimensional joist hangers. For installation at end of post or beam or where inverted flange is needed

SUH series – 16 gauge steel construction for more demanding applications and light truss support. Rough sawn sizes available.

Materials: See table

Finish: G90 galvanizing; JLIF – G-185 galvanizing

Options: See table for Corrosion Finish Options.
See SUH Specialty Options Table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.

Typical JL26 installation

Typical SUH26-2 installation

Typical JL210IF-TZ inverted flange installation

JL26

SUH26-2

JLIF

SUH Specialty Options Table

Refer to Specialty Options pages 320-322 for additional details.

Option ⁴	Skewed ^{1,3}	Sloped Seat ^{2,3}	Sloped / Skewed ^{1,2,3}
Range	1° to 67-1/2° when width is 1-3/4" or less. 1° to 50° on all others.	1° to 45°	See Sloped Seat and Skewed
Allowable Loads	100% of table load. 75% of uplift load on skews greater than 15°.	100% of table load	80% of table load. 75% of uplift load on skews greater than 15°.
Ordering	Add <i>SK</i> angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Ex. SUH210_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. SUH210_SL30D	See Sloped Seat and Skewed. Ex. SUH210_SK45R_SQ_SL30D

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

HUS / JUS / MUS Slant Nail Face Mount Joist Hangers

Lumber Hangers

The HUS, JUS and MUS hanger series offer double shear nailing. MiTek's dimple allows for 30° to 45° nailing through the joist into the header resulting in higher loads and less nailing. Slant nailing allows for higher load values, fewer nails, and faster installation.

Materials: JUS – 18 gauge; MUS – 18 gauge; HUS – 14 or 16 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options. See HUS Specialty Options Table.

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **Slant / double shear joist nails must be driven at a 30° to 45° angle through the joist or truss into the header to achieve listed loads.**
- JUS / MUS – 16d sinkers (0.148" x 3-1/4") may be used where 10d commons are specified with no load reduction.

Typical HUS46 installation

Typical JUS26 installation

HUS28-2

JUS28

AVAILABLE IN
GOLD
COAT

MUS

Double shear nail design features fewer nails and faster installation

Uses standard length common nails

HUS Specialty Options Table

Refer to Specialty Options pages 320-322 for additional details.

Option	Inverted Flange
Range	Not available in widths less than 2-1/4".
Allowable Loads	100% of table load. 65% of table load when nailing into the support members end grain.
Ordering	Add <i>IF</i> to product number. Ex. HUS410_IF

Typical HUS410IF inverted flange installation

HD Heavy-Duty Face Mount Hangers

Lumber Hangers

HD hangers are heavy-duty face mount hangers offering min/max nailing utilizing round and diamond holes to achieve design flexibility and maximum loads for use with headers, joists, and trusses.

Materials: 14 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options and Specialty Options Table

Codes: IBC, FL, LA

Typical HD610 installation

Typical HD210-2 installation

Typical HD3212 glulam installation

Installation:

- Install the required fasteners according to the table.
- **Min Nailing** – Fill all round nail holes.
- **Max Nailing** – Fill all round and diamond nail holes.

HD610

HD51135

Specialty Options Table

Refer to Specialty Options pages 320-322 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ^{2,3}	Sloped / Skewed ^{1,2,3}	Inverted Flange
Range	1° to 67-1/2° when width is 1-3/4" or less. 1° to 50° on all others.	1° to 45°	See Sloped Seat and Skewed	2-1/4" widths or greater (Widths < 2-1/4" may be available as a Custom, contact MiTek)
Allowable Loads	100% of table load. 75% of uplift load on skews greater than 15°.	100% of table load	80% of table load. 75% of uplift load on skews greater than 15°.	100% of table load. 65% of table load when nailing into the support members end grain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Example: HD410_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Example: HD410_SL30D	See Sloped Seat and Skewed Example: HD410_SK45R_SL30D_SQ	Add <i>IF</i> , to product number. Example: HD410_IF

Typical HD210-2IF inverted flange installation

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

HDQIF Inverted Flange Face Mount Hangers

HDQIF inverted flange hangers install with wood screws eliminating the need to drill bolt holes, simplifying installation.

Materials: 14 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek's WS15 (1/4" dia. x 1-1/2" long) and WS3 (1/4" dia. x 3" long) structural wood screws are supplied with HDQIF hangers.

Typical HDQIF inverted flange installation

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) For JUS and HUS hangers: Nails must be driven at a 30° to 45° angle through the joist or truss into the header to achieve the table loads.
 3) MiTek's WS15 (1/4" dia. x 1-1/2" long) and WS3 (1/4" dia. x 3" long) structural wood screws are included with HDQIF hangers.
 4) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) For JUS and HUS hangers: Nails must be driven at a 30° to 45° angle through the joist or truss into the header to achieve the table loads.
- 3) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with HDQIF hangers.
- 4) NAILS: 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with HDQIF hangers.
 3) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

HL Light Gauge Purlin Hangers

These top mount hangers are designed for supporting floor joists or 2x dimensional lumber. The top mount style allows builders to drop in joists or purlins quickly.

Materials: 18 gauge

Finish: G90 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.

Typical HL210 installation

HL210

KB / KLB Beam & Purlin Hangers

With a top mount design and heavy steel fabrication the KB and KLB hangers can cover medium-to-heavy beam and purlin applications. The top mount design offers high loads with less nailing than comparable face mount hangers.

KLB – 14 gauge

KB – 12 gauge

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- NA20D nails are included with hangers where applicable.
- For welded installations, see page 327.
- **KB / KLB models are not recommended for use with LVL, PSL, or LSL members.**

Typical KB installation

Typical KLB installation

KB

KLB

HDO Heavy-Duty Top Mount Hangers

Lumber Hangers

Primarily used to hang joists or headers in medium load conditions. These hangers provide higher load values with less nailing.

Materials: 12 gauge

Finish: G90 galvanizing

Options: See Specialty Options Table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Check top flange dimensions to ensure compatibility with header widths.
- **Do not use for welded or nailer applications. Reference Specialty Options table below for hanger options.**

HDO standard installation

HDO28-2

Typical HDO410IF inverted flange installation

Typical HDO skewed option installation

Specialty Options Table

Refer to Specialty Options pages 320 and 323 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2,3}	Inverted Flange
Range	1° to 67-1/2° when width is 1-3/4" or less. 1° to 50° on all others.	1° to 45°	See Sloped Seat and Skewed	Not available in widths less than 3-1/8"
Allowable Loads	100% of table load. 75% of uplift load on skews greater than 15°.	100% of table load	80% of table load. 75% of uplift load on skews greater than 15°.	100% of table load. 65% of table load when nailing into the support members end grain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Ex. HD0210_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. HD0210_SL30D	See Sloped Seat and Skewed. Ex. HD0210_SK45R_SL30D_SQ	Add <i>IF</i> to product number. Ex. HD0610_IF

1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.

2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.

3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

SW – Light-duty hanger

SWH – Medium-duty hanger

KHW – Heavy-duty hanger installs with NA20D nails for higher load capacities

Materials: SW top flange - 12 gauge; stirrup - 12 gauge;
 SWH top flange - 7 gauge; stirrup - 12 gauge;
 KHW top flange - 3 gauge; stirrup - 10 gauge

Finish: Primer

Options: See Specialty Options below

Codes: IBC, FL, LA

Typical KHW46 installation

Typical SW210 installation

KHW46

SW210

Installation:

- Install the required fasteners according to the table.
- NA20D nails are supplied with KHW hangers.
- For welded installations see page 327.
- **KHW models are not recommended for use with LVL, PSL, or LSL headers.**

Nailer Options

Table represents maximum allowable loads for hangers used on wood nailers. Reference page 199.

1) Uplift Loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) **NAILS:** 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long, NA20D nails are 0.192" dia. x 2-1/2" long and are included with KB and KHW hangers.

JH Multi-Purpose Strap Hanger

Lumber Hangers

These strap-style hangers are designed to support trusses, joists, or purlins. JH models may be bent along the flange allowing builders to use the hangers in top mount, face mount, or combination applications.

Materials: 18 gauge
Finish: G90 galvanizing
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **Slant / double shear joist nails must be driven at a 30° to 45° angle through the joist or truss into the header to achieve listed loads.**
- If installing in top mount configuration, field bend top flange over header.
- 16d sinkers (0.148" dia. x 3-1/4") may be used where 10d common are specified with no load reduction.

Double shear nail design features fewer nails and faster installation

Uses standard length common nails

Typical JH20 installation

JH20

Joist Size	MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Header Size	Fastener Schedule ^{2,3}					DF/SP Allowable Loads (Lbs.)				S-P-F Allowable Loads (Lbs.)				Code Ref.

						2 x 12	--	14	10d	6	10d	2210	2545	2765	1300	1945	2240	2435	1050	

1) Uplift Loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) Nails must be driven at a 30° to 45° angle through the joist or truss into header to achieve the table loads.
 3) **NAILS:** 10d nails are 0.148" dia. x 3" long. 16d sinkers (0.148" dia. x 3-1/4" long) may be used where 10d commons are specified with no reduction in load.

RR Ridge Rafter Hanger

The RR Ridge Rafter supports rafter pitches up to 7:12 (30°). Nesting top flange for back-to-back installation on 2x support beams.

Materials: 18 gauge
Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- The rafter end at the ridge must be plumb cut to achieve published loads.
- Optional diamond nail holes can be used to fasten RR to end of rafter before setting rafter into place.

Typical RR installation

RR

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) **NAILS:** 10d x 1-1/2" nails are 0.148" dia. x 1-1/2" long and LL915 denotes a MiTek LumberLok Screw, #9 x 1-3/8" long.

LS Light Slope Rafter Hangers

Lumber Hangers

A field-adjustable seat gives the LS hanger application flexibility.
 The LS hanger slopes from 0° to 30° down (0 to 7:12 pitch down).

Materials: 18 gauge
Finish: G90 galvanizing
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- The LS can be field adjusted to slopes from 0° to 30° down.

Typical LS268 installation

LS268

 2) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 16d nails are 0.162" dia. x 3-1/2" long.

LSRR Light-Duty Slope Rafter / Retrofit Hanger

The LSRR is a sloped hanger that can be adjusted in the field for solid sawn rafters. This innovative hanger allows the carried member to be installed flush with the bottom of supporting member or with the bottom of carried member extended below the supporting member. This hanger installs with fewer nails when compared to similar connectors. The LSRR may be installed after the rafters are in place allowing flexible installation sequencing and retrofit options. Slopes up or down to 45°.

Materials: 18 gauge
Finish: G-185 galvanizing
Codes: IBC, FL, LA

Installation:

- Place solid sawn rafter in the installation position.
- Slide the LSRR into position from below and install 10d nails into header.
- Bend bottom flange to match rafter and drive 10d x 1-1/2" nails squarely into rafter.
- Install 10d common slant nails at a 30° angle, allowing them to penetrate supporting member.

Typical LSRR installation

Typical LSRR installation

Corrosion Finish Key
■ Stainless Steel ■ Gold Coat
■ HDG ■ Triple Zinc

The LSS series is ideal for connecting rafters to ridge and hip beams in vaulted roof structures. This series is field adjustable to meet a variety of skew and/or slope applications. Slopes and skews 0° to 45°.

Materials: 18 gauge

Finish: G-185 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Hot-dip galvanized fasteners are required for exterior applications.
- Toe-nailing the rafter into place for temporary support may help with installation.
- LSS is available in left (L) and right (R) versions. Illustrations show left and right skews.

Steps:

1. Bend the back flange of the LSS to match the skew angle of the rafter.
2. Position the LSS against the rafter and bend the seat (bottom) of the LSS to match the slope of the rafter.
3. With the LSS held tight to the side and bottom of the rafter, install the prescribed nails into the ridge or hip beam.
4. Install the prescribed nails through the dimple nail holes into the rafter.
5. Install the prescribed nails through the seat into the rafter.

1) Allowable loads apply to hangers skewed 0°-45° from perpendicular with the hanger bucket sloped 0°-45° down from horizontal.

2) Uplift loads are increased 60% for wind or seismic loads; no further increase shall be permitted.

3) 10d x 1-1/2 nails may be substituted for 10d common nails in the two lowermost joist bucket nail holes for all installations with no reduction in allowable loads.

4) For exterior applications, hot-dip galvanized (HDG) fasteners must be used.

5) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

New products or updated product information are designated in **blue font**.

LSSH Slope/Skew Hangers

Lumber Hangers

The LSSH series connects rafters to ridge beams in vaulted roof structures. This series is field adjustable to meet a variety of skew and/or slope applications. Slopes and skews 0° to 45°.

Materials: See table

Finish: G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.

Steps:

1. Position LSSH connector against plumb-cut end of joist. Fasten joist side flanges on both sides with 10d (0.148") x 1-1/2" nails. Bend seat up to fit against joist bottom and drive (1) 10d (0.148") x 1-1/2" nail through bottom seat into rafter bottom. Drive (2) 10d (0.148") x 1-1/2" nails at downward angle through dimpled nailing guides.
 2. Lean connector and rafter end against ridge beam at desired position. Install specified 10d (0.148" dia. x 3") or 16d (0.162 x 3-1/2") nails through nail holes into ridge beam at right 90° angle. If skewing the rafter, only drive nails into ridge beam on inside flange.
 3. Bend flange to desired angle.
 4. Hammer outside flange until edge touches header. Fasten outside flange to ridge by driving specified 10d (0.148" dia. x 3") or 16d (0.162 x 3-1/2") nails through nail holes.
- Web stiffeners are required for all wood I-Joist installations.
 - Designer may consider adding a tension restraint for the supported member for roof slopes exceeding 6/12. Refer to page 118.

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Stainless steel ring shank nails must be used with stainless steel connectors to achieve tabulated allowable loads.
- 3) For exterior applications, hot-dip galvanized (HDG) fasteners must be used.
- 4) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

Typical SKH26L
installation
left skew

Installation:

- Install the required fasteners according to the table.
- The hangers listed are for standard sizes and will accommodate a 40° to 50° skew range.
- Most sizes do not require a miter cut for installation. Refer to table footnote identified with an asterisk.
- SKH / SKHH is available in left (L) and right (R) versions. Illustrations show left and right skews.
- For I-Joist installations, web stiffeners are required.
- Refer to illustration for staggered I-Joist application for double 2", 2-5/16", and 2-1/2" models.
- For double I-Joist installations, web stiffeners between I-Joists are required.

- Triple Zinc

KF / PHG Panel Hangers

Lumber Hangers

KF – Fastens to joist ends with nails

PHG – Features a gripper design to hold the joist in place without nailing during the assembly process

Materials: 18 gauge

Finish: G90 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- In panelized construction, installers are allowed to nail through both the sheathing and the hanger top flange with (1) 10d nail. The nail should be centered in the top flange and be no closer than 1/4" from the back or front edge of the top flange.
- Use locator window to center hanger on purlin center line.
- **KF / PHG – These hangers do not provide uplift resistance.**

Typical KF installation

KF

JPF Purlin Hangers

Lumber Hangers

Materials: 20 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Diamond holes allow optional header nailing.
- **Slant / double shear joist nails must be driven at a 30° to 45° angle through the joist or truss into the header to achieve listed loads.**
- 16d sinkers (0.148" dia. x 3-1/4") may be used where 10d commons are specified with no load reduction.

Typical JPF24 installation

Typical JPF24 back-to-back installation

Double shear nail design features fewer nails and faster installation

Uses standard length common nails

JPF24

TUS – For a single-ply purlin

DTUS – For a single-ply purlin with a 2-ply saddle dimension

Materials: 20 gauge
Finish: G90 galvanizing
Patents: U.S. Patent No. 8,966,857

Installation:

- Install the required fasteners according to the table.
- Attaches with standard 1-1/2" joist hanger nails that can be installed with a positive placement nail gun or be hand driven.

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) LL915 denotes a MiTek LumberLok screw (#9 x 1-3/8" long) and must be ordered separately.
 3) **NAILS:** 8d x 1-1/2 nails are 0.131" dia. x 1-1/2" long, 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

FHD Panel Hangers

Lumber Hangers

The FHD26 hanger straddles the header and receives a joist from both sides.

Materials: 18 gauge
Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- In panelized construction, installers are allowed to nail through both the sheathing and the hanger top flange with (1) 10d nail. The nail should be centered in the top flange and be no closer than 1/4" from the back or front edge of the top flange.

Typical FHD26 installation

FHD26

- 1) Loads listed are per side.
- 2) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 3) **NAILS:** 10d x 1-1/2" nails are 0.148" dia. x 1-1/2" long, 16d nails are 0.162" dia. x 3-1/2" long. 10d x 1-1/2" nails may be substituted for 16d header nails with a maximum load of 960 lbs.

UMH Universal Masonry Hangers

A versatile solution for hanging beams from masonry walls. Face mount design allows hanger to be used with beam heights from 16" to 24". Available in a variety of widths for solid sawn, glulam, or engineered lumber beams.

Materials: 3 gauge
Finish: Primer
Codes: FL

Installation:

- Install the required fasteners according to the table.
- Fully grouted and reinforced concrete block or cast-in-place concrete with a minimum of (1) #5 rebar continuous to footing with standard hook at bolt locations.

Typical UMH installation

UMH

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Fasten UMH hanger to concrete structure with (2) 3/4" dia. DeWalt Screw-Bolt™+ screw anchors or equal with 5" minimum embedment. Screw anchors shall be installed in masonry with grouted cells in accordance with manufacturer's installation specifications.
- 3) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

HD Masonry Face Mount Hangers

Lumber Hangers

The HD series Face Mount Hangers can be used to connect framing members, including but not limited to roof trusses, floor joists and EWP members to concrete masonry unit (CMU) and concrete walls.

Materials: 14 gauge
Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- Masonry screws shall be Powers® Tapper+® HWH 3/16" x 1-3/4" or equivalent.
- Minimum 6" wide grout-filled concrete masonry units with a minimum compressive strength of 1,500 psi (10.3 MPa).
- Minimum 6" wide concrete wall with a minimum compressive strength of 2,500 psi (17.3 MPa).

Typical HD inverted flange field installation

Typical HD inverted flange edge installation (flush to edge only)

Typical HD top installation (flush to top only)

Typical HD inverted flange corner installation (flush to edge and top)

HD610

Specialty Options Table – Refer to Specialty Options pages 320-322 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ^{2,3}	Sloped / Skewed ^{1,2,3}	Inverted Flange
Range	1° to 67-1/2° when width is 1-3/4" or less. 1° to 50° on all others.	1° to 45°	See Sloped Seat and Skewed	2-1/4" widths or greater (Widths < 2-1/4" may be available as a Custom, contact MiTek)
Allowable Loads	100% of table load. 75% of uplift load on skews greater than 15°.	100% of table load	80% of table load. 75% of uplift load on skews greater than 15°.	100% of table load. 65% of table load when nailing into the support members end grain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BL</i>) to product number. Example: HD410_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Example: HD410_SL30D	See Sloped Seat and Skewed Example: HD410_SK45R_SL30D_SQ	Add <i>IF</i> , to product number. Example: HD410_IF

1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

- 1) Allowable loads assume the use of Powers® Tapper+® HWH 3/16" x 1-3/4" or equivalent.
- 2) Allowable loads assume wood members have a minimum specific gravity of 0.50 or greater.
- 3) Fasteners to be installed per manufacturer's recommendations.
- 4) Field installation indicates that the uppermost and outermost fasteners are a minimum of 8" from the top and side of the masonry wall.
- 5) Edge installation indicates that the hanger is installed flush with the edge of the masonry wall.
- 6) Top installation indicates that the hanger is installed with the hanger flush with the top of the masonry wall.
- 7) Corner installation indicates that the hanger is installed in the corner of the masonry wall flush to the edge, and the top fastener is less than 2" from the top.
- 8) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2 long, 10d nails are 0.148 dia. x 3" long.

LGUM / HGUM Masonry Girder Hangers

Lumber Hangers

LGUM and HGUM Masonry Girder Hangers are high-capacity beam/girder hangers designed for installation to masonry or concrete walls. The LGUM and HGUM hangers use MiTek's WS structural wood screws (supplied) to attach the beam to hanger and screw anchors (supplied) to attach to the masonry or concrete wall. These hangers eliminate the need for constructing beam pockets.

Materials: LGUM – 12 gauge; HGUM – 7 gauge

Finish: G90 galvanizing

Options: See Specialty Options table

Installation:

- Install the required fasteners according to the table.
- MiTek's WS3 structural wood screws and screw anchors are supplied with hangers.
- Beams comprised of multiple plies must be adequately fastened to act as a single member.
- Beam height dimension (H) must be specified when ordering HGUM hangers.
- Moisture barrier between beam and wall may be required by local jurisdiction.

Typical HGUM installation

Typical LGUM installation

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Allowable loads assume top header fasteners are a minimum of 4" from the top of the wall.
- 3) "Specify" denotes the required supported beam height that must be specified at the time of ordering.
- 4) Use DeWalt Screw-Bolt™+ (included); or equivalent, installed in accordance with manufacturer's specification.
- 5) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with hangers.

Specialty Options Table – Refer to Specialty Options pages 320-322 for additional details.

Typical HGUM one inverted flange, left shown

MPH Masonry Hangers

Lumber Hangers

These hangers are designed to support standard lumber joists, I-Joists, or beams. Easy installation into concrete block walls makes the MPH an attractive alternative to fabricating seats in masonry (or attaching ledgers) to support joists or beams.

Materials: 12 gauge

Finish: Primer

Options: See Specialty Options Table on page 183

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- 16d duplex nails are not supplied with MPH hangers.
- Place hanger into position on top of concrete block. Install (2) 16d duplex nails (0.162" dia. x 3-1/2" double head) through the top flange nail holes. Then continue laying the next course of block.
- A minimum of one course shall be laid over hanger top flange and one course below hanger top flange. Courses adjacent to the top flange shall be subsequently grouted.
- **These products do not provide uplift resistance.**

Typical MPH single-ply installation

MPH

Typical MPH double-ply installation

1) Masonry compressive strength shall be minimum 1,500 psi.

2) "Specify" denotes the required supported beam height must be specified at the time of ordering.

3) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d duplex nails are 0.162" dia. x 3-1/2" long, double headed nails and shall be installed in grouted cells in accordance to manufacturer's installation specifications.

Specialty Options Table – Refer to Specialty Options pages 320-321, 324 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2,3}	Top Flange Offset	
Range	1° to 60°	1° to 45°	See Sloped Seat and Skewed	--	
Allowable Loads	100% of table load	100% of table load	100% of table load	Hanger Width 3-1/2" or less 3-9/16" to 5-1/2" 5-9/16" to 7-1/2"	% of table load: 60% 75% 85%
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BI</i>) to product number. Ex. MPH210_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. MPH210_SL30D	See Sloped Seat and Skewed. Ex. MPH210_SK45R_SL30D_SQ	Add <i>OS</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. MPH210_OL	

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 - 2) Alternate installation – Use (2) 1/2" x 4" DeWalt Screw-Bolt+™ or equivalent for loads up to 2,400 lbs. when attaching to CMU.
 - 3) NAILS: 10d nails are 0.148" dia. x 3" long.
- New products or updated product information are designated in blue font.

Specialty Options Table

Refer to Specialty Options pages 320-321, 324 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2,3}	Top Flange Offset		Saddle
Range	1° to 45°	1° to 45°	See Sloped Seat and Skewed	--		--
Allowable Loads	100% of table load	100% of table load	100% of table load	Hanger Width 3-1/2" or less 3-9/16" to 5-1/2" 5-9/16" to 7-1/2"	% of table load: 60% 75% 85%	100% of table load per side
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Ex. HWUH410_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. HWUH410_SL30D	See Sloped Seat and Skewed. Ex. HWUH410_SK45R_SL30D_SQ	Add <i>OS</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. HWUH410_OL		Add <i>SA</i> , and saddle width required to product number. Ex. HWUH410_SA=5.5

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

NFM Narrow Flange Masonry Hangers

Lumber Hangers

NFM – Standard design

NFM_U – High uplift design

Materials: Top Flange – 3/8" steel; U-strap – 7 gauge

Finish: Primer

Options: See Specialty Options Table below

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- Designed for both concrete walls and grout-filled reinforced CMU walls.

Typical NFM installation

NFM3

Typical NFM_U installation

NFM3X12U

Specialty Options Table

Refer to Specialty Options pages 320-321, 324 for additional details.

Option	MiTek Series	Skewed ^{1,2}
Range	NFM / NFMU	1° to 45°
Allowable Loads	NFM / NFMU	100% of table load
Ordering	NFM	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Ex. NFM3_SK45R_BV
	NFMU	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. NFM35X8U_SK45R_SQ

1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.

2) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

- 1) Allowable loads are based on 2,500 psi concrete or masonry.
- 2) J-Bolt shall be cast-in-place and have a minimum 6" embedment and not less than 4" from the edge of concrete.
- 3) In addition to the J-Bolt, "U" models also require a 3/4" dia. ITW Ramset/Redhead Dyna Bolt sleeve anchor or equal with minimum 5" embedment depth installed in the face. Bolt shall be installed in accordance with installation specifications provided by ITW Ramset.
- 4) Bolts shall conform to ASTM A 307 or better.
- 5) **NAILS:** 10d nails are 0.148" dia. x 3" long

MiTek's Light-Duty Firewall Hangers are designed to provide an economic between wood framed fire walls and I-joists or dimension lumber. The advanced design allows the installation of the FWHL **before** the 5/8" gypsum wallboard (drywall) is attached and permits the building project to be completely framed-up, and weather-tight before the gypsum wallboard sheathing work starts.

Materials: 14 gauge

Finish: G90 galvanizing

Options: See Specialty Options table and Nailers Options on page 189

Codes: IBC, FL, LA

Patents: U.S. Patent No. 11,649,626

Installation:

- Install the face of hanger flanges tight to stud wall framing.
- The FWHL does not need to be installed at stud locations.
- The end of the joist should measure no more than 1-5/8" from the face of the supporting wall. See Figure 1.
- The joist should bear fully on the FWHL seat with a gap no greater than 1/8" between the end of the supported member and the hanger. See Figure 1.
- **Gypsum Wallboard Installation** – Use the FWHL-T template to slot cut the gypsum wallboard. See FWHL-T Installation Sequence. Slide the gypsum wallboard into position and fasten to the framing members meeting the minimum requirements specified by code.
- Web stiffeners are required for I-Joist Installations.

2 Hour Fire-Rating

FWHL hangers are tested per ASTM E814 standards. When installed on one side of a maximum 2 hour fire-rated wall assembly, the penetration of the MiTek Fire Wall Hangers through the gypsum wallboard will not reduce the fire resistive rating of the 2 hour fire resistive assembly.

FWHL

Typical FWHL solid sawn installation
(I-Joist similar)

FWHL-T

(must be ordered separately)

Figure 1

Typical FWHL Side View

FWHL-T Installation Sequence

1) Align the FWHL-Template slot with the mark in the gypsum wallboard and engage the prongs into edge of gypsum wallboard

2) Rotate the template and press down on the end to engage the corner prongs

3) Run the gypsum wallboard cutter down the template to cut the slot

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Allowable download shall not be increased for other load durations.
- 3) Values in the table apply to standard top mount hangers without slope, skew or any other specialty options.
- 4) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

Specialty Options Table – Refer to Specialty Options pages 320 and 323 for additional details.

Option	Skewed ¹	Top Flange Offset
Range	1° to 70°	--
Allowable Loads	80% of table load on skews up to 45°. 70% of table load on skews 46° to 70°.	70% of table download. 180 lbs. Max uplift.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. FWHL1795_SK45R_SQ	Add <i>OS</i> , and right or left (<i>L</i>), to product number. Ex. FWHL1795_OS

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.

The Fire Wall Hanger is designed for attaching truss, I-joist, solid sawn lumber, or engineered wood floor framing members to double wall top plates or minimum 2-ply 2x solid sawn header fire rated wood frame walls. The advanced design allows the installation of the FWH **before** the 5/8" gypsum wallboard (drywall) is attached and permits the building project to be completely framed-up, and weather-tight before the gypsum wallboard sheathing work starts.

Materials: 14 gauge

Finish: G90 galvanizing

Options: See Specialty Options table and Nailor Options on 191

Codes: IBC, FL, LA

Patents: U.S. Patent No. 11,649,626

Installation:

- Install the face of hanger flanges tight to stud wall framing.
- For typical installations, the FWH does not need to be installed at stud locations. An increase in capacity can be achieved by installing the FWH at a stud. See the Allowable Load Table on page 195.
- The end of the truss/joist should measure 1-5/8" from the face of the supporting wall. See Figure 1.
- The truss/joist should bear fully on the FWH seat with a gap no greater than 1/8" between the end of the supported member and the hanger. See Figure 1.
- **Gypsum Wallboard Installation** – Use the FWH-T template to slot cut the gypsum wallboard. See FWH-T Installation Sequence. Slide the gypsum wallboard into position and fasten to the framing members meeting the minimum requirements specified by code.

2 Hour Fire-Rating

FWH hangers are tested per ASTM E814 standards. When installed on one side of a maximum 2 hour fire-rated wall assembly, the penetration of the MiTek Fire Wall Hangers through the gypsum wallboard will not reduce the fire resistive rating of the 2 hour fire resistive assembly.

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Listed loads shall not be increased.
- 3) FWH hangers with 1-9/16" joist width have an allowable download of 2,665 lb in DF.
- 4) Values in the table apply to standard top mount hangers without slope, skew or any other specialty options.
- 5) **NAILS:** 10d x 1-1/2" nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

Specialty Options Table – Refer to Specialty Options pages 320 and 323 for additional details.

Option	Skewed ¹	Top Flange Offset
Range	1° to 70°	--
Allowable Loads	80% of table load on skews up to 45°. 70% of table load on skews 46° to 70°.	70% of table download. 180 lbs. Max uplift.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. FWH3514_SK45R_SQ	Add <i>OS</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. FWH3595_OS

1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.

MiTek has expanded the FWH Fire Wall Hanger series to include the higher load carrying capacity FWHBP, the Fire Wall Hanger for Beams and Purlins. The FWHBP transfers the load into the supporting wall through bearing on the top plates and directly attaching to the stud pack or post below. The advanced design allows the installation of the FWHBP **before** the 5/8" gypsum wallboard (drywall) is attached and permits the building project to be completely framed-up, and weather-tight before the gypsum wallboard sheathing work starts.

Materials: 12 gauge

Finish: Primer

Options: See Specialty Options table on page 193

Codes: IBC, FL, LA

Patents: U.S. Patent No. 10,179,992

Installation:

- Install the face of hanger flanges tight to stud wall framing.
- The end of the truss/joist should measure 1-5/8" from the face of the supporting wall.
- The truss/joist should bear fully on the FWHBP seat with a gap no greater than 1/8" between the end of the supported member and the hanger.
- **Gypsum Wallboard Installation** – Use the FWH-T template to slot cut the gypsum wallboard. See FWH-T Installation Sequence. Slide the gypsum wallboard into position and fasten to the framing members meeting the minimum requirements specified by code.

2 Hour Fire-Rating

FWH hangers are tested per ASTM E814 standards. When installed on one side of a maximum 2 hour fire-rated wall assembly, the penetration of the MiTek Fire Wall Hangers through the gypsum wallboard will not reduce the fire resistive rating of the 2 hour fire resistive assembly.

Typical FWHBP attachment to top plate/beam and stud pack/post

FWH-T
(must be ordered separately)

FWHBP Hanger

FWHBP Stud Pack Width

FWH-T Installation Sequence

1) Align the FWH-Template slot with the mark in the gypsum wallboard and engage the prongs into edge of gypsum wallboard

2) Rotate the template and press down on the end to engage the corner prongs

3) Run the gypsum wallboard cutter down the template to cut the slot

FWHH Heavy-Duty Fire Wall Hangers

Fire Wall Hangers

The MiTek FWHH Heavy-Duty Fire Wall Hanger is designed to support beams and purlins at header locations. The higher capacity of the FWHH is achieved through top flange bearing along with added face and beam/purlin nailing. The advanced design allows the installation of the FWHH **before** the 5/8" gypsum wallboard (drywall) is attached and permits the building project to be completely framed-up, and weather-tight before the gypsum wallboard sheathing work starts.

Materials: 12 gauge

Finish: Primer

Options: See Specialty Options table on page 195

Codes: IBC, FL, LA

Patents: U.S. Patent No. 11,649,626

Installation:

- Install the FWHH hanger flanges tight to the face of the header.
- A minimum 2-ply 2x10 header is required for installation.
- The beam/purlin should bear fully on the FWHH seat with a gap no greater than 1/8" between the end of the supported member and the hanger.
- **Gypsum Wallboard Installation** - Use the FWH-T template to slot cut the gypsum wallboard. See FWH-T Installation Sequence. Slide the gypsum wallboard into position and fasten to the framing members meeting the minimum requirements specified by code.

2 Hour Fire-Rating

FWH hangers are tested per ASTM E814 standards. When installed on one side of a maximum 2 hour fire-rated wall assembly, the penetration of the MiTek Fire Wall Hangers through the gypsum wallboard will not reduce the fire resistive rating of the 2 hour fire resistive assembly.

1) Uplift Loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

2) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

New products or updated product information are designated in **blue font**.

Specialty Options Table – Refer to Specialty Options pages 320 and 323 for additional details.

Option	Skewed ¹
Range	1° to 70°
Allowable Loads	70% of table load
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. FWHH3516_SK60R_SQ

1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.

The MiTek FWHH Heavy-Duty Fire Wall Hanger is designed to support beams and purlins at header locations. The higher capacity of the FWHH is achieved through top flange bearing along with added face and beam/purlin nailing. The advanced design allows the installation of the FWHFM **before** the 5/8" gypsum wallboard (drywall) is attached and permits the building project to be completely framed-up, and weather-tight before the gypsum wallboard sheathing work starts.

Materials: 12 gauge

Finish: Primer

Options: See Specialty Options table on page 197

Codes: IBC, FL, LA

Installation:

- Install the face of hanger flanges tight to SCL column/framing.
- The end of the truss/joist should measure 1-5/8" from the face of the supporting column.
- The truss/joist should bear fully on the FWHFM seat with a gap no greater than 1/8" between the end of the supported member and the hanger.
- **Gypsum Wallboard Installation** – Use the FWH-T template to slot cut the gypsum wallboard. See FWH-T Installation Sequence. Slide the gypsum wallboard into position and fasten to the framing members meeting the minimum requirements specified by code.

2 Hour Fire-Rating

FWH hangers are tested per ASTM E814 standards. When installed on one side of a maximum 2 hour fire-rated wall assembly, the penetration of the MiTek Fire Wall Hangers through the gypsum wallboard will not reduce the fire resistive rating of the 2 hour fire resistive assembly.

Typical FWHFM installation

FWH-T Installation Sequence

1) Align the FWH-Template slot with the mark in the gypsum wallboard and engage the prongs into edge of gypsum wallboard

2) Rotate the template and press down on the end to engage the corner prongs

3) Run the gypsum wallboard cutter down the template to cut the slot

- 1) Download allowable load is for attachment to the wide face of a supporting column.
- 2) Uplift loads have been increased 60% for wind or seismic loads. No further increase shall be permitted.
- 3) Distance from the supported member to the edge of the header support flange is 9/16".
- 4) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long. New products or updated product information are designated in blue font.

Specialty Options Table – Refer to Specialty Options pages 320 and 322 for additional details.

Option	Skewed ¹
Range	1° to 70°
Allowable Loads	70% of table load
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. FWHFM5214_SK60L_SQ

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.

Sloped I-Joists

Use sloped seat hangers and beveled web stiffeners whenever the slope exceeds the following: 1/2:12 for seat bearing lengths of 2-1/2" or less; 3/8:12 for bearing lengths between 2-1/2" and 3-1/2"; and 1/4:12 for bearing lengths in excess of 3-1/2".

Multiple I-Joist Plies

Fasten together multiple plies of wood I-Joists, in accordance with the manufacturer's installation guidelines, such that the joists act as a single unit.

I-Joist Rotation

It may be necessary to install blocking, sheathing or MiTek bridging to restrain torsional rotation of a supporting wood I-Joist when using I-Joist hangers

Fasteners

Install only the specified nails. The flanges of wood I-Joists may split if larger diameter nails or longer nails are installed. Do not install nails larger than 16d common wire nails (0.162" diameter) into the web stiffeners in the wood I-Joist.

Backer Blocks

Pattern the nails used to install backer blocks or web stiffeners in wood I-Joists to avoid splitting the block. The nail pattern should be sufficiently spaced to avoid the same grain line, particularly with solid sawn backer blocks. Backer blocks must be installed on wood I-Joist acting as the header, or supporting member. Install in accordance with the I-Joist manufacturer's installation guidelines. The nails used to install hangers mounted to an I-Joist header must penetrate through the web and into the backer block on the opposite side.

Top Flange Hangers

The thickness of the hanger metal and nail heads on top mount hangers must be evaluated for the effect on subsequent sheathing. Ensure that the top mount hanger is installed so the flanges of the hanger are not over-spread which tends to elevate the supported I-Joist causing uneven

floor surfaces and squeaking. Similarly, ensure that the hanger is installed plumb such that the face flanges of the hanger are mounted firmly against the wide-face surface of the header.

Flush framing

! Hanger over-spread

! Hanger not plumb

Correct Slant Nail Installation

Always secure wood I-Joist using 10d x 1-1/2" nail driven at a 30° to 45° angle and firmly seated

Common Nailing Errors

! Wrong Angle

When a nail is driven into the bottom flange of the wood I-Joist parallel to the glue lines, separation of veneers can occur which substantially reduces the design loads of the connection.

! Nail Too Long

When using nails longer than MiTek's recommended nails, bottom flange splitting may occur. Also, this can raise the wood I-Joist off the seat, resulting in uneven surfaces and squeaky floors along with reduced allowable loads.

Hangers for joists **without web stiffeners** must support the I-Joist's top flange and provide lateral resistance with no less than 1/8" contact. MiTek recommends that hangers for joist **with web stiffeners** should

be 60% of the joist height for stability during construction. If this cannot be accomplished, potential joist rotation must be resolved by other means. Refer to web stiffeners reqd. column in EWP tables.

Nailer Installations

Correct Hanger Attachment to Nailer

A nailer or sill plate is considered to be any wood member attached to a steel beam, concrete block wall, concrete stem wall, or other structure unsuitable for nailing, which is used as a nailing surface for top mount hangers to hold beams or joists.

Nailer Sized Correctly

Top flange of hanger is fully supported and recommended nails have full penetration into nailer, resulting in a carried member hanging safely at the proper height.

The nailer must be sized to fit the support width as shown and be of sufficient thickness to satisfy recommended top flange nailing requirements. A design professional must specify nailer attachment to steel beams.

Correct Attachment

Wrong Nailer Size Causes Component Failure

Too Narrow

Top flange not fully supported can cause nail breakout. Or, by fully supporting top flange, hanger is tilted back, causing lifting of carried member which results in uneven surfaces and squeaky floors.

Too Wide

Loading can cause cross grain breaking of nailer. The recommended nailer overhang is 1/4" maximum per side.

Too Thin

Top flange nailing cannot fully penetrate nailer, causing reduced allowable loads. Never use hangers which require multiple face nails since the allowable loads are dependent on all nail holes being used.

1) KEG, KLEG, KMEG hangers assume allowable loads with top flange.
 2) When an I-Joist is used as a header, designer must evaluate if a web stiffener or backer block is required.
 3) TMPH connectors assume allowable loads based on a 14/12 pitch.
 • Represents common applications and product configurations. Consult MiTek for additional applications and/or optional product configurations.

The THFI is a face mount hanger designed to attach EWP I-joist members to wood headers. The unique design of the THFI combines the installation ease of a top mount hanger with the installation flexibility of a face mount hanger. Because the side flanges extend to the top chord of the I-joist, web stiffeners are not required. The THFI hangers also feature strategically placed Seat Cleats® which lock the bottom flange of the I-joist to the hanger eliminating the need for joist nails to be installed.

The innovative top flange alignment tabs with the holding cleats assist the placing and alignment of the hanger prior to nailing by hanging onto the header with holding cleats biting into the wood. If the alignment tabs are not desired or a deeper height member is to be carried, the tabs can be easily bent out of the way. Alignment tabs do not contribute to the allowable design values of the THFI hangers.

Materials: 18 gauge

Finish: G90 galvanizing

Codes: IBC, FL, LA

Patents: U.S. Patent No. 5,564,248 & U.S. Patent No. 9,206,594

Installation:

- Install the required fasteners according to the table.
- Alignment tabs are not structural and can be bent back or removed to assist hanger placement.
- Web stiffeners are not required for THFI hangers unless specified by the I-joist manufacturer. Web stiffeners are not required for lateral stability.
- THFI2514 model has diamond holes in the header flange for Min/Max nailing option. For the Max nailing option, install nails in both the round and diamond shaped header holes.

Typical THFI installation

IHFL (18GA) and IHF (16GA) series face mount hangers feature speed prongs for temporary placement and seat cleats to grab the bottom flange of the supported I-joist. Diamond holes in header and joist allow for optional Max nailing for customized fastening to match allowable load needed. Install nails in all fastener holes when the Max allowable load is needed while lighter load capacities can be achieved with a quick installation of round holes only, saving time and money on the jobsite.

Features:

- Seat Cleats lock bottom chord of I-joist eliminating need for joist nails.
- Dimples with diamond nail holes for optional joist nailing when higher uplift loads are needed.
- Min/Max nailing provide flexible installation options.

Materials: IHFL – 18 gauge; IHF – 16 gauge

Finish: G90 galvanizing

Options: See Specialty Options table

Codes: IBC, FL, LA

Patents: U.S. Patent No. #5,564,248

Installation:

- Install the required fasteners according to the table.
- Position I-joist into hangers and tap or push into place to fully seat joist and engage cleats.
- Web stiffeners are not required unless specified by the I-joist manufacturer.
- **Min Nailing** – Fill all round nail holes.
- **Max Nailing** – Fill all round and diamond holes.

Uplift Capacity Options:

- **IHFL (18GA)** – For additional uplift capacity, install (2) 10d (0.148") x 1-1/2" nails through diamond dimple holes into the bottom chord of I-joist member for a total uplift of 220 lbs.
- **IHF (16GA)** – Uplift capacity for hangers installed without joist nails is 65 lbs.

Typical IHFL2514 min nailing installation

IHFL2514

Typical IHF1714 max nailing installation

IHF1714

Raised Dimple nail holes allow 30° to 45° nailing into I-Joist bottom flange.

Seat Cleat® helps lock I-Joist into place

Specialty Options Table – refer to Specialty Options pages 320-322 for additional details.

Option	Skewed ^{1,3,4,5}	Sloped Seat ^{2,3,4}	Sloped / Skewed ^{1,2,3,4,5}	Inverted Flange ⁴
Range	1° to 67-1/2° when width is 1-3/4" or less. 1° to 50° on all others.	1° to 45°	See Sloped Seat and Skewed	Not available in widths less than 2-1/4"
Allowable Loads	100% of table load. 75% of uplift load on skews greater than 15°.	100% of table load	80% of table load. 75% of uplift load on skews greater than 15°.	100% of table load. 65% of table load when nailing into the support members end grain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Example: IHF23925_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Example: IHF23925_SL30D	See Sloped Seat and Skewed Example: IHF23925_SK45R_SL30D_BV	Add <i>IF</i> , to product number. Example: IHF23925_IF

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.
- 4) Modifications to IHFL or IHF hangers do not feature seat cleats or optional nailing.
- 5) Skewed hangers may require web stiffeners to be installed in order to facilitate joist nail installation.

THF Face Mount I-Joist Hangers

The THF is a face mount hanger designed to attach EWP I-joist members to wood headers.

Materials: See EWP Face Mount Hangers tables, page 209

Finish: G90 galvanizing

Options: See Specialty Options table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Web stiffeners are required for I-Joist installations.

Typical THF double I-Joist installation

Typical THF I-Joist to I-Joist installation

Specialty Options Table – refer to Specialty Options pages 320-322 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ^{2,3}	Sloped / Skewed ^{1,2,3}	Inverted Flange
Range	1° to 50°	1° to 45°	See Sloped Seat and Skewed	One or two flanges available on all sizes.
Allowable Loads	100% of table load. 75% of uplift load on skews greater than 15°.	100% of table load	80% of table load. 75% of uplift load on skews greater than 15°.	100% of table load. 65% of table load when nailing into the support members end grain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Example: THF23118-2_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Example: THF23118-2_SL30D	See Sloped Seat and Skewed Example: THF23118-2_SK45R_SL30D_BV	Add <i>IF</i> , to product number. Example: THF23118-2_IF

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

HD Face Mount Hangers

Designed to support LVL, LSL, and PSL beams and headers in medium load conditions.

Materials: 14 gauge

Finish: G90 galvanizing

Options: See Specialty Options table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **Min Nailing** – Fill all round nail holes.
- **Max Nailing** – Fill all round and diamond nail holes.

Typical HD installation

HD

Specialty Options Table – refer to Specialty Options pages 320-322 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ^{2,3}	Sloped / Skewed ^{1,2,3}	Inverted Flange
Range	1° to 67-1/2° when width is 1-3/4" or less. 1° to 50° on all others.	1° to 45°	See Sloped Seat and Skewed	2-1/4" widths or greater (Widths < 2-1/4" may be available as a Custom, contact MiTek)
Allowable Loads	100% of table load. 75% of uplift load on skews greater than 15°.	100% of table load	80% of table load. 75% of uplift load on skews greater than 15°.	100% of table load. 65% of table load when nailing into the support members end grain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Example: HD410_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Example: HD410_SL30D	See Sloped Seat and Skewed Example: HD410_SK45R_SL30D_SQ	Add <i>IF</i> , to product number. Example: HD5216_IF

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

HDQIF Inverted Flange Face Mount Hangers

Inverted flange face mount hangers designed to support LVL, LSL and PSL beams and headers with MiTek's WS Structural Wood Screws.

Materials: 14 gauge

Finish: G90 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek's WS15 (1/4" dia. x 1-1/2" long) and WS3 (1/4" dia. x 3" long) structural wood screws are supplied with HDQIF hangers.

Typical HDQIF inverted flange installation

HDQIF

HUS Face Mount Hangers

Designed for medium load conditions. Extended 3" deep seat provides enhanced bearing.

Materials: 16 gauge
Finish: G90 galvanizing
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Slant / double shear joist nails must be driven at a 30° to 45° angle through the joist or truss into the header to achieve listed loads.
- Slant/double shear nails must be full length to achieve listed load values.

Typical HUS installation

Raised dimple allows 30° to 45° nailing

HUS

Drive joist nails into header at 30° to 45° to achieve listed loads.

Typical HUS double shear installation

THDHQ Girder Truss Hangers

The THDHQ hangers are designed to attach LVL, LSL and PSL beams and headers using MiTek's WS structural wood screws for higher design load capacity.

Materials: 12 gauge
Finish: G90 galvanizing
Options: See Specialty Options Table
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek's WS structural wood screws are supplied with THDHQ hangers.

Typical THDHQ48 installation

THDHQ48

Specialty Options Table

– refer to Specialty Options pages 320-322 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2,3}	Inverted Flange ⁴
Range	1° to 45°	1° to 45°	See Sloped Seat and Skewed	One flange option available on all sizes. Two flange option available on widths = 6-9/16"
Allowable Loads	100% of table allowable load. 75% of table uplift load.	100% of table allowable load	100% of table allowable load. 75% of table uplift load.	100% of table value. May not be installed into the support members endgrain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Ex. THDHQ410_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. THDHQ410_SL30D	See Sloped Seat and Skewed. Ex. THDHQ410_SK45R_SL30D_BV	<u>One flange option:</u> Add <i>IF</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. THDHQ46_IFR <u>Two flange option:</u> Add <i>IF</i> , to product number. Ex. THDHQ26-4_IF

- 1) Skewed THDHQ hangers with skews greater than 15° always have all joist fasteners on one side of the outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist fasteners.
- 3) Skewed hangers typically require a bevel cut however, a square cut option may be available as a custom when requested.
Some square cut hangers will require custom pricing due to welded back plate.
- 4) The inverted flange option is not available on skewed THDHQ hangers.

THD – Medium capacity hanger for LVL, LSL, and PSL beams

THDH – Heavy capacity hanger for LVL, LSL, and PSL beams

Materials: See EWP Face Mount Hangers tables, pages 210-212

Finish: G90 galvanizing

Options: See Specialty Options table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **THD** – Drive bend line nails into header at 45° to achieve listed loads.
- **THDH** – Drive joist nails into header at 30° to 45° to achieve listed loads.

Typical THD installation

Typical THDH installation

Typical bend line nailing installation

THD7210

THD410

THDH

Some model designs may vary from illustration shown

Typical THDH614_SK45L_SQ installation

THDH614_SK45R_SQ

Drive joist nails into header at 30° to 45° to achieve listed loads.

Typical THDH double shear installation

Specialty Options Table

– refer to Specialty Options pages 320-322 for additional details.

Option	MiTék Series	Skewed ^{1,3,4}	Sloped Seat ²	Sloped / Skewed ^{1,2,3,4}	Inverted Flange
Range	THD	1° to 45°	1° to 45°	See Sloped Seat and Skewed	THD410 – THD414 One flange
	THDH				THD610 – THD7210 Two flange
Allowable Loads	THD	85% of table load	65% of table load	65% of table load	100% of table load 65% of table load when nailing into the support members end grain
	THDH	85% of table load 50% of table uplift load	85% of table load	52% of table load 50% of table uplift load	N/A
Ordering	THD	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Ex. THDH410_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex: THDH410_SL30D	See Sloped Seat and Skewed Ex. THDH410_SK45R_SL30D_BV	One flange option: Add <i>IF</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. THD410_IFR Two flange option: Add <i>IF</i> , to product number. Ex. THD610_IF
	THDH				N/A

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange. All skewed THDH hangers have joist nails on one side only.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) THDH models - Skewed hangers typically require a bevel cut. A square cut option may be available as a custom.
- 4) THD models - For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) IHFL (18GA) — install (2) 10d (0.148") x 1-1/2" nails through diamond dimple holes into the bottom chord of I-Joist member for a total uplift of 220 lbs.
 IHF (16GA) — uplift capacity for hangers installed without joist nails is 65 lbs.
 3) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.
Load tables address hanger/header/fastener limitations only. Joist limitations must be determined for each installation.

- Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- WS3 structural wood screws are 1/4" dia. x 3" long and are included with HDQ hangers.
- NAILS:** 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

TFI / TFL / THO Top Mount Hangers

EWP Hangers

TFI / THO – Engineered for I-Joist to header applications. Offers full lateral support of the I-Joist top chord, eliminating the need for web stiffeners in most applications. Raised dimple nailing guides help assure correct 45° nailing into the I-Joist bottom flange. The THO features the patented Seat Cleat® that allows for quick, positive seating. The Seat Cleat® will hold the I-Joist in place, eliminating spring back during nailing in the bottom flange.

TFL – Features 1-1/2" top flange depth that accommodates all header types as well as back-to-back installations. Also features MiTek's patented Seat Cleat® for quick, positive seating.

Materials: See EWP Top Mount Hangers tables, pages 217-222

Finish: G90 galvanizing

Options: See Nailer Options Table

Codes: IBC, FL, LA

Patents: U.S. Patent No. 5,564,248 – THO & TFL

Installation:

- Install the required fasteners according to the table.
- Refer to the top mount table for applications requiring web stiffeners.
- Requirements for web stiffener from the I-Joist manufacturer should be followed, even if web stiffeners are not required in MiTek literature.
- Uplift capacity for THO and TFL single-ply hangers installed without joist nails = 85 lbs. Refer to THO, TFL, & THF Single-Ply I-Joist Hangers Technical Bulletin.

Typical THO installation

Typical TFL installation

 2) Listed download shall not be increased.
 3) Values in the table apply to standard top mount hangers without slope, skew or any other specialty options.
 4) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long, 16d x 2-1/2 nails are 0.162" dia. x 2-1/2" long.

BPH / HBPH Top Mount Hangers

EWP Hangers

These hangers are used to support LVL, LSL, and PSL beams and headers in medium-to-heavy load conditions.

Materials: BPH – 12 gauge; HBPH – 10 gauge

Finish: G90 galvanizing

Options: See Nailer Options and Specialty Options Table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Refer to the top mount table for applications requiring web stiffeners.
- Requirements for web stiffener from the I-Joist manufacturer should be followed, even if web stiffeners are not required in MiTek literature.
- For welded installations, see page 327.

Specialty Options Table

– refer to Specialty Options pages 320 and 322 for additional details

Option	Skewed ^{1,3}	Sloped Seat ^{2,3}	Sloped / Skewed ^{1,2,3}	Sloped Top Flange ⁴
Range	1° to 50°	1° to 45°	See Sloped Seat and Skewed	0° to 45°
Allowable Loads	100% of table load	100% of table load	100% of table load	100% of table load
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BL</i>) to product number. Example: BPH3595_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Example: BPH3595_SL30D	See Sloped Seat and Skewed. Example: BPH3595_SK45R_SL30D_SQ	Add <i>SLTF</i> , angle required and right (<i>R</i>) or left (<i>L</i>), to product number. Example: BPH3595_SLTF30L

1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.

2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.

3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skewed angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.

4) Sloped top flanges with slopes greater than 15° may have additional header nails.

Heavy-duty hanger for LVL, LSL, and PSL beams.

Materials: 7 gauge

Finish: Primer

Options: See Nailer Options and Specialty Options Table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- For welded installations, see page 327.
- NA16D-RS nails are supplied with HLBH hangers.

Typical HLBH installation

Specialty Options Table

– refer to Specialty Options pages 320 and 324 for additional details

Option	Skewed ^{1,3}	Sloped Seat ^{2,3}	Sloped / Skewed ^{1,2,3}	Sloped Top Flange ⁴	Top Flange Offset	Saddle ⁵	Ridge
Range	1° to 50°	1° to 45°	See Sloped Seat and Skewed	0° to 45°	--	--	0° to 45°
Allowable Loads	8070 lbs. Max. 50% of uplift load on skew greater than 15°.	7000 lbs. Max.	6650 lbs. Max. 50% of uplift load on skew greater than 15°.	100% of table load	45% of table load	100% of table load per side. See footnote 5.	100% of table load
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BL</i>) to product number. Ex. HLBH3595_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. HLBH3595_SL30D	See Sloped Seat and Skewed. Ex. HLBH3595_SK45R_SL30D_BV	Add <i>SLTF</i> , angle required, and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. HLBH3595_SLTF30L	Add <i>OS</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. HLBH3595_OSL	Add <i>S4</i> , and saddle width required to product number. Ex. HLBH3595_SA=7.125	Add <i>DA</i> , and angle required to product number. Ex. HLBH3595_DA30

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) Skewed hangers typically require a bevel cut however, a square cut option may be available as a custom when requested.
- 4) Sloped top flanges with slopes greater than 15° may have additional header nails.
- 5) Minimum header thickness shall be double the top flange (TF) dimension for 100% table load.

PHM / PHXU Top Flange Hangers

EWP Hangers

Used to connect LVL, LSL, and PSL beams to headers in medium load conditions using standard nails.

Materials: See EWP Top Mount Hangers tables, pages 217-225

Finish: PHM – Primer; PHXU – G90 galvanizing

Options: See Nailers Options Table and Specialty Options Table

Codes: IBC, FL, LA

Patents: U.S. Patent No. 6,463,711 – PHXU

Installation:

- Install the required fasteners according to the table.
- For welded installations, see page 327.

1) When I-joist is used as a header, all header nails must be 10d (0.148") x 1-1/2.
 2) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted
 3) Some listed loads may be increased for short-term loading. Refer to MiTek code evaluation reports for details.
 4) The reduction factors for I-Joist headers with 1-1/4" thick flanges is 0.69 and 0.84 for 1-3/8" flange.
 5) **NAILS:** 10d nails are 0.148" dia. x 3" long, NA16D-RS nails are 0.148" x 3-1/2" long, 16d nails are 0.162" dia. x 3-1/2" long.
Load tables address hanger/header/fastener limitations only. Joist limitations must be determined for each installation.

- When I-joist is used as a header, all header nails must be 10d (0.148") x 1-1/2.
- Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted
- Some listed loads may be increased for short-term loading. Refer to MiTek code evaluation reports for details.
- The reduction factors for I-Joist headers with 1-1/4" thick flanges is 0.69 and 0.84 for 1-3/8" flange.
- NAILS:** 10d nails are 0.148" dia. x 3" long, NA16D-RS nails are 0.148" x 3-1/2" long, 16d nails are 0.162" dia. x 3-1/2" long.
Load tables address hanger/header/fastener limitations only. Joist limitations must be determined for each installation.

EWP Hangers

LGU, MGU, and HGUs are high capacity girder to girder face mount connectors. Fastens with MiTek's WS structural wood screws for ease of installation. Fasteners are placed high on connector to permit the connection of a deep carried member to a shallower carrying member; useful where tops of beams must be flush.

Materials: LGU / MGU – 10 gauge; HGU – 7 gauge

Finish: G90 galvanizing

Options: See Specialty Options Table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Install with MiTek's WS structural wood screws supplied with connector.
- Beams comprised of multiple plies must be laminated to act as a single member.
- Multi-ply carrying beams may require additional connection of laminations at connector.
- Beam height dimension (H) must be specified when ordering.

Typical LGU, MGU, HGU installation

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) H denotes minimum hanger height. Specify height when ordering.
 3) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with hangers.

Specialty Options Table

– Refer to Specialty Options pages 320-322 for additional details

Option	MiTek Series	Skewed ^{1,4,5}	Inverted Flange ^{2,3}
Range	LGU, MGU, HGU	1° to 45°	One Inverted Flange option available on some sizes. See footnotes 2 and 3.
Allowable Loads	LGU	55% of table value. 30% of uplift.	100% of table value
	MGU	65% of table value. 30% of uplift.	
	HGU	70% of table value. 30% of uplift.	
Ordering	LGU, MGU, HGU	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and bevel cut (<i>BV</i>) to product number. Ex. MGU550_H=18_SK45R_BV	Add <i>IF</i> and right (<i>R</i>) or left (<i>L</i>) to product number. Ex. MGU550_H=18_IFR

1) Skewed hangers with skews greater than 15° may have all joist fasteners on outside flange.
 2) One inverted flange (IF) is available on the following sizes: LGU363, MGU550, HGU550, HGU725, HGU900.
 3) The inverted flange option is not available on skewed LGU, MGU or HGU hangers.
 4) Bevel cut required on skewed parts to meet table loads.
 5) Square cut option may be available as a custom, contact MiTek.

KEGQ hangers have high load capacities attributable to wood screw fastening, heavy steel construction, and a continuous top flange.

Materials: Top Flange – 3 gauge; U-Strap – 7 gauge

Finish: Primer

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek's WS3 structural wood screws, 1/4" dia. x 3" long, are supplied with KEGQ hangers.
- **Minimum supporting height (H) is 11-7/8".**
- Beam height dimension (H) must be specified when ordering.

Typical KEGQ550 installation

1) Uplift loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.
 2) "Specify" denotes the required supported beam height that must be specified at the time of ordering, with 11" being the minimum.
 3) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with KEGQ hangers.

Specialty Options Table – refer to Specialty Options pages 320 and 322-323 for additional details.

Option	Skewed ^{1,2,3}	Sloped Seat ³
Range	1° to 45°	1° to 45°
Allowable Loads⁴	100% of table load up to Max. load of 13,965 lbs.	100% of table load up to Max. load of 9,470 lbs.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. KEGQ362_H=11_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. KEGQ362_H=11_SL30D

1) Carried member must have square cut end on skewed option.
 2) Skewed hangers with skews greater than 15° may have all joist fastening on outside flange.
 3) KEGQ hangers cannot be a combination of sloped and skewed.
 4) Allowable loads are based on wood members with a specific gravity of 0.50 or greater.

The TMP and TMPH are designed to make rafter-to-plate connections and eliminate time-consuming bird's-mouth notching or bevel plate installation. Both series are available in I-Joists sizes, as well as standard 2x sizes.

TMP – Adjusts to pitches from 1/12 to 6/12

TMPH – Adjusts to pitches from 6/12 to 14/12

Materials: TMP – 18 gauge;

TMPH – 16 gauge, Fulcrum – 12 gauge

Finish: G90 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Position connector on top plate. Fasten connector to outside of top plate with specified nails. Insert rafter into rafter pocket. Adjust rafter and pocket to correct pitch. Fasten rafter to connector with specified nails. Installing the **TMP** requires driving specified nails through the opposing slots in the pocket. **TMPH** installation involves sliding the fulcrum until it supports the pocket at the desired pitch and nailing down through the fulcrum base into the top plate to lock the fulcrum into position.

TMP Table

1) Allowable loads may not be increased for duration of load adjustments.

2) Web stiffeners are required for all Wood I-Joist installations.

3) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

The LSSH series connects rafters to ridge beams in vaulted roof structures. This series is field adjustable to meet a variety of skew and/or slope applications. Slopes and skews 0° to 45°.

Materials: See table

Finish: G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.

Steps:

1. Position LSSH connector against plumb-cut end of joist. Fasten joist side flanges on both sides with 10d (0.148") x 1-1/2" nails. Bend seat up to fit against joist bottom and drive (1) 10d (0.148") x 1-1/2" nail through bottom seat into rafter bottom. Drive (2) 10d (0.148") x 1-1/2" nails at downward angle through dimpled nailing guides.
 2. Lean connector and rafter end against ridge beam at desired position. Install specified 10d (0.148" x 3") or 16d (0.162" x 3-1/2") nails through nail holes into ridge beam at right 90° angle. If skewing the rafter, only drive nails into ridge beam on inside flange.
 3. Bend flange to desired angle.
 4. Hammer outside flange until edge touches header. Fasten outside flange to ridge by driving specified 10d (0.148" x 3) or 16d (0.162" x 3-1/2") nails through nail holes.
- Web stiffeners are required for all wood I-Joist installations.
 - Designer may consider adding a tension restraint for the supported member for roof slopes exceeding 6/12. Refer to page 118.

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Stainless steel ring shank nails must be used with stainless steel connectors to achieve tabulated allowable loads.
- 3) For exterior applications, hot-dip galvanized (HDG) fasteners must be used.
- 4) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

Corrosion Finish Key

- Stainless Steel ■ Gold Coat
- HDG ■ Triple Zinc

HD – 14 gauge hangers utilizing round and diamond holes to achieve design flexibility and maximum loads

HDQIF – 14 gauge inverted flange hanger installs with wood screws

THDH – 12 gauge heavy capacity hanger

Materials: HD/HDQIF — 14 gauge; THDH — 12 gauge

Finish: G90 galvanizing

Options: See HD/THDH Specialty Options Table on page 231

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **HD Min Nailing** – Fill all round nail holes.
- **HD Max Nailing** – Fill all round and diamond nail holes.
- MiTek WS3 (1/4" dia. x 3" long) structural wood screws are supplied with HDQIF hangers.
- **THDH** – Drive joist nails into header at 30° to 45° to achieve listed loads.

Typical HD installation

HD

Typical HDQIF inverted flange installation

HDQIF

Drive joist nails into header at 30° to 45° to achieve listed loads.

 3) **NAILS:** 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

Continued on next page

HD / THDH Specialty Options Table – Refer to Specialty Options pages 320-322 for additional details

Option	MiTek series	Skewed ^{1,3,4}	Sloped Seat ^{2,3}	Sloped / Skewed ^{1,2,3,4}
Range	HD	1° to 50°	1° to 45°	See Sloped Seat and Skewed
	THDH	1° to 45°		
Allowable Loads	HD	100% of table load. 75% of uplift load on skews greater than 15°	100% of table load	80% of table load. 75% of uplift load on skews greater than 15°
	THDH	85% of table load. 50% of table uplift load	85% of table load	52% of table load. 50% of table uplift load
Ordering	HD / THDH	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Example: THDH3210_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Example: HD5112_SL30D	See Sloped Seat and Skewed Example: HD3212_SK45R_BV_SL30D

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger.
- 4) Some square cut hangers will require custom pricing due to welded back plate. Welded products have a primer finish.

GHF Glulam Face Mount Hangers

An architectural choice for exposed glulam purlin applications. The GHF features heavy load capacity and a multitude of optional designs for unusual applications. Header fasteners are positioned high and joist flange fasteners low for best design with glulam members.

Materials: See table

Finish: Primer

Options: See Specialty Options Table on page 232

Installation:

- Install the required fasteners according to the table.
- MiTek’s WS structural wood screws are supplied with GHF hangers.

Typical GHF51135 installation

- 1) Allowable loads based on seat bearing calculated at 560 psi perpendicular to grain.
- 2) MiTek’s WS25 (1/4" dia. x 2-1/2" long) and WS3 (1/4" dia. x 3" long) structural wood screws are included with GHF hangers.
- 3) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

- 1) Allowable loads based on seat bearing calculated at 560 psi perpendicular to grain.
- 2) MiTek's WS3 (1/4" dia. x 3" long) structural wood screws are included with GHF hangers.
- 3) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

Specialty Options Table

– refer to Specialty Options pages 320-322 for additional details

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2}	Inverted Flange
Range	1° to 50°	1° to 45°	See Sloped Seat and Skewed	Not available in widths less than 4-1/2"
Allowable Loads	100% of table load. 75% of uplift load on skews greater than 15°.	100% of table load	80% of table load 75% of uplift load on skews greater than 15°.	100% of table load. 65% of table load when fastening into the support members end grain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Ex. GHF31900_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. GHF31900_SL30D	See Sloped Seat and Skewed. Ex. GHF31900_SK45R_BV_SL30D	Add <i>IF</i> to product number. Ex. GHF51135_IF

- 1) Skewed hangers with skews greater than 15° may have all joist fastening on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist fastening.
- 3) Skewed hangers typically require a bevel cut however, a square cut option may be available as a custom when requested.

Typical GHF51135IF inverted flange installation

LGU, MGU, and HGUs are high capacity girder to girder face mount connectors. Fastens with MiTek's WS structural wood screws for ease of installation. Fasteners are located towards the top of connector to permit the connection of a deep carried member to a shallower carrying member; useful where tops of beams must be flush.

Materials: LGU / MGU – 10 gauge; HGU – 7 gauge
Finish: G90 galvanizing
Options: See Specialty Options Table
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Install with MiTek's WS structural wood screws supplied with connector.
- Beams comprised of multiple plies must be laminated to act as a single member.
- Multi-ply supporting beams may require additional connection of laminations at connector.
- Beam height dimension (H) must be specified when ordering.

Typical LGU, MGU, HGU installation

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) H denotes minimum hanger height. Specify height when ordering.
 3) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with hangers.

Specialty Options Table

– refer to Specialty Options pages 320-322 for additional details

Option	MiTek Series	Skewed ^{1,4,5}	Inverted Flange ^{2,3}
Range	LGU MGU HGU	1° to 45°	One Inverted Flange option available on some sizes. See footnotes 2 and 3.
Allowable Loads	LGU	55% of table value. 30% of uplift.	100% of table value
	MGU	65% of table value. 30% of uplift.	
	HGU	70% of table value. 30% of uplift.	
Ordering	LGU MGU HGU	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and bevel cut (<i>BV</i>) to product number. Ex. LGU525_H=18_SK45R_BV	Add <i>IF</i> and right (<i>R</i>) or left (<i>L</i>) to product number. Ex. LGU525_H=18_IFR

- 1) Skewed hangers with skews greater than 15° may have all joist fasteners on outside flange.
- 2) One inverted-flange (IF) is available on the following sizes:
LGU363, LGU525
MGU525, MGU550, MGU563, MGU700
HGU525, HGU550, HGU562, HGU700, HGU725, HGU900
- 3) The inverted flange option is not available on skewed LGU, MGU or HGU hangers.
- 4) Bevel cut required on skewed parts to meet table loads.
- 5) Square cut option may be available as a custom, contact MiTek.

KHW Welded Glulam Top Mount Hangers

Glulam Beam Connectors

Heavy-duty hanger installs with NA20D nails for higher load capacities.

Materials: Top flange – 3 gauge; stirrup – 10 gauge

Finish: Primer

Options: See Nailer Options and Specialty Options Table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- NA20D nails are supplied with KHW hangers.
- For Welded installations see page 327.
- **KHW models are not recommended for use with LVL, PSL or LSL headers**

Typical KHW installation

KHW

Beam Width (in)	MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)			Fastener Schedule ³				DF/SP Allowable Loads (Lbs.) ²				Code Ref.
				W	H	D	Header		Joist		Floor 100%	Roof 115%	125%	Uplift ¹ 160%

- 1) Uplift Loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) KHW load values are based on 560 psi perpendicular to grain loading.
- 3) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, NA20D nails are 0.192" dia. x 2-1/2" long and are included with KHW hangers.

Nailer Options

– table represents maximum allowable loads for hangers used on wood nailers. Reference page 199.

MiTek Series	Nailer Size	Fastener Schedule ³				DF/SP Allowable Loads (Lbs.) ^{1,2}		SPF Allowable Loads (Lbs.) ^{1,2}	
		Nailer		Joist		Download 100%		Download 100%	
		Top Qty	Type	Qty	Type				
KHW	3X	4	16d x 2-1/2	2	10d	4415		3525	

- 1) Listed loads shall not be increased.
- 2) Values in the table apply to standard top mount hangers without slope, skew or any other specialty options.
- 3) **NAILS:** 10d nails are 0.148" dia. x 3" long, 16d x 2-1/2 nails are 0.162" dia. x 2-1/2" long.

Specialty Options Table

– refer to Specialty Options pages 320-321, 324 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2,3}	Sloped Top Flange ⁴	Top Flange Offset		Saddle	Ridge
Range	1° to 84°	1° to 45°	See Sloped Seat and Skewed	0° to 35°	--		--	0° to 45°
Allowable Loads	100% of table load	100% of table load	100% of table load	100% of table load	Hanger Width 3-1/4" or less	% of table load: 60% 75%	100% of table load per side	100% of table load
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BL</i>) to product number. Ex. KHW5_H=16_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. KHW5_H=16_SL30D	See Sloped Seat and Skewed. Ex. KHW5_H=16_SK45R_SQ_SL30D	Add <i>SLTF</i> , angle required, and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. KHW5_H=16_SLTF30L	Add <i>OS</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. KHW5_H=16_OSL		Add <i>S4</i> , and saddle width required to product number. Ex. KHW5_H=16_SA=5-1/2"	Add <i>DA</i> , angle required to product number. Ex. KHW5_H=16_DA30

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) For skewed hangers, the required cut type (square or bevel) of joist member may vary based on skew angle and width of hanger. Some square cut hangers will require custom pricing due to welded back plate.
- 4) Sloped top flanges with greater than 15° may have additional header nails.

Bolt-only fastening, heavy steel construction, and a continuous top flange allow the KLEG, KMEG, and KEG products to have high load capacities.

KLEG – (4) bolt light capacity hanger

KMEG – (6) bolt medium capacity hanger

KEG – (8) bolt heavy capacity hanger

Materials: See table

Finish: Primer

Options: See Specialty Options Table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **Minimum supporting height is 10" for the KLEG; 13" for the KMEG; 20" for the KEG.**
- Supported beam height dimension (H) must be specified when ordering. Minimum supported height for KLEG and KMEG is 9" and 12" for KEG.

Typical KLEG5 installation

KMEG5

- 1) Allowable loads are based on wood members with a Fc.L of 560 psi or greater.
- 2) Uplift loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.
- 3) H denotes minimum hanger height. Specify height when ordering.
- 4) To order hangers without top flange, add "NOTF" to end of stock number as in "KMEG5_H=16_NOTF".

Specialty Options Table

– refer to Specialty Options pages 320-321, 324 for additional details

Option	Skewed ³	Sloped Seat	Top Flange Offset ^{1,2}
Range	1° to 45°	1° to 45°	--
Allowable Loads ⁴	KLEG – 10,000 lbs. Max KMEG – 10,000 lbs. Max KEG – 14,250 lbs. Max	KLEG – 9,665 lbs. Max KMEG – 9,665 lbs. Max KEG – 9,665 lbs. Max	KLEG – 5,665 lbs. Max KMEG – 5,665 lbs. Max
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. KLEG3_H=11_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. KLEG3_H=11_SL30D	Add <i>OS</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. KLEG3_H=11_OLS

- 1) Top flange offset hangers may not be skewed.
- 2) Top flange offset option is not available for KEG models.
- 3) Carried member must have square cut end on skewed option.
- 4) Published loads in the table are for hangers with a top flange.
- 5) Maximum allowable loads are based on wood members with a Fc.L of 560 psi or greater.

Hanger for glulam beam and purlin applications.

Materials: 7 gauge

Finish: Primer

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek's WS3 structural wood screws are supplied with hangers.
- Beam height dimension (H) must be specified when ordering.
- **Minimum height (H) is 7-1/2".**
- See welded installation table on page 327.

Typical KHHB installation

KGB

KHGB

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) "Specify" denotes the required supported beam height must be specified at the time of ordering.
 3) Supporting header shall be no less than 3" thick.
 4) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with hangers.
 5) Allowable loads are based on wood members with a F_{cL} of 625 psi or greater.

These heavy beam hangers are designed for use with glulam and timber beams. The continuous top mount flange offers high load capacity with minimal fastening.

KGLT – Medium capacity hanger

KHGLT – Heavy capacity hanger

Materials: See table

Finish: Primer

Options: See Nailers Options table below and Specialty Options Table on page 238

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Beam height dimension (H) must be specified when ordering.
- See welded installation table on page 327.
- **Minimum height (H) is 8-1/2" for KGLS and KGLST, 10-1/2" for KHGLS and KHGLST.**

	4x	4	6	WS3	8	WS3	6040	1925	5075	1615

1) Listed loads shall not be increased.
 2) MiTek's WS15 structural wood screws are 1/4" dia. x 1-1/2" long and are not included with hangers.
 3) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with hangers.
 4) Values in the table apply to standard top mount hangers without slope, skew or any other specialty options.

Continued on next page

Specialty Options Table

– refer to Specialty Options pages 320-321, 324 for additional details

Option	Skewed ^{1,3}	Sloped Seat ^{2,3}	Sloped / Skewed ^{1,2,3}	Sloped Top Flange ⁴	Top Flange Offset	Saddle
Range	1° to 50°	1° to 45°	See Sloped Seat and Skewed	0° to 45°	--	--
Allowable Loads	50% of uplift load on skew greater than 15°	KGLT – 4,110-lb Max KHGLT – 7,000-lb Max	KGLT – 4,110-lb Max KHGLT – 7,000-lb Max 50% of uplift load on skew greater than 15°	100% of table load	60% of table load for KGLT. 45% of table load for KHGLT.	100% of table load per side
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BI</i>) to product number. Ex. KGLT3_H=16_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. KGLT3_H=16_SL30D	See Sloped Seat and Skewed. Ex. KGLT3_H=16_SK45R_BV_SL30D	Add <i>SLTF</i> , angle required and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. KGLT3_H=16_SLTF30L	Add <i>OS</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. KGLT3_H=16_0SL	Add <i>SA</i> , and saddle width required to product number. Ex. KGLT3_H=16_SA=5-1/2"

- 1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) Skewed hangers typically require a bevel cut however, a square cut option may be available as a custom when requested.
- 4) Sloped top flanges with slopes greater than 15° may have additional header nails.

KGLS / KGLST / KHGLS / KHGLST Glulam Saddle Hangers

KGLS – Saddle hanger

KGLST – Saddle hanger with seismic straps

KHGLS – Heavier version of KGLS

KHGLST – Heavier version of KGLST

Materials: Top flange - 3 gauge; Stirrup - 7 gauge

Finish: Primer

Options: See KGLS / KHGLS Specialty Options Table on page 239

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Loads and nail schedule apply to each saddle hanger stirrup.
- **Minimum header height is 8-1/2" for the KGLS and KGLST; 10-1/2" for the KHGLS and KHGLST.**
- Beam height dimension (H) must be specified when ordering.
- **KGLST** and **KHGLST** models include seismic straps which must be installed with (3) 3/4" thru-bolts in each supported member and (2) 3/4" thru-bolts into the supporting beams.
- See welded installation table on page 327.

Typical KHGLST installation

- 1) Allowable loads and fastener schedules apply to each side of the saddled hanger.
- 2) Minimum header height is 8-1/2" for the KGLS and KGLST; 10-1/2" for the KHGLS and KHGLST.
- 3) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with hangers.
- 4) Where "Specify" is called out for the saddle width, the minimum saddle width shall be 5".
- 5) Allowable loads are based on wood members with a F_{cL} of 560 psi or greater.

KGLS / KHGLS Specialty Options Table – refer to Specialty Options pages 320-321, 324 for additional details

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2}	Sloped Top Flange ⁴	Top Flange Offset
Range	1° to 50°	1° to 45°	See Sloped Seat and Skewed	0° to 30°	May not be skewed
Allowable Loads	KGLS – 6,500-lb Max KHGLS – 7,980-lb Max 50% of uplift load on skews greater than 15°.	KGLS – 6,500-lb Max KHGLS – 9,165-lb Max	KGLS – 5,500-lb Max KHGLS – may not be sloped / skewed. 50% of uplift load on skews greater than 15°.	100% of table load	50% of table load for KGLS. 45% of table load for KHGLS.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) or bevel cut (<i>BV</i>) to product number. Ex. KGLS35H=115_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Example: KGLS35H=115_SL30D	See Sloped Seat and Skewed. Example: KGLS35H=115_SK45R_BV_SL30D	Add <i>SLTF</i> , angle required, and right (<i>R</i>) or left (<i>L</i>), to product number. Example: KGLS35H=115_SLTF30L	Add <i>OS</i> to product number. Example: KGLS35H=115_OS

- 1) Skewed hangers with skews greater than 15° may have all joist fasteners on outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
- 3) Skewed hangers typically require a bevel cut however, a square cut option may be available as a custom when requested.
- 4) Sloped top flanges with greater than 15° may have additional header nails.

Supports a glulam beam off the end of another glulam beam. Refer to the Optional Horizontal Loading Table for design variations.

Materials: See table on page 241

Finish: Primer

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- To allow for wood shrinkage, position bolts in slots away from the bearing seat.
- For dapped beams, reduce the “H” dimension by the “PT” dimension for each dap.

Optional Horizontal Loading Table

MiTek Stock No. Prefix	Ref. No.	Min. H ³ (in)	Rotation Bolts ² /Beam		Seismic Bolts ²		DF/SP Allowable Loads (Lbs.) ¹
			Qty	Dia (in)	Qty	Dia (in)	
			F1 160%				
* KHC	HCA	8	2	3/4	--	--	--
* KHC2T	--	9	2	3/4	2	3/4	--
KHC2CT	--	12	2	3/4	2	3/4	9445
KHCCT	HCCTA	12	2	3/4	3	3/4	14170
KHC4CT	--	12	2	3/4	4	3/4	18895
* KHC3	HC3A	8	3	3/4	--	--	--
* KHC3T	--	9	3	3/4	3	3/4	--
KHC2C3T	--	12	3	3/4	2	3/4	9445
KHCC3T	--	12	3	3/4	3	3/4	14170
KHC4C3T	HC4C3TA	12	3	3/4	4	3/4	18895

- 1) Loads are based on a 5-1/8" width Douglas-Fir Larch beam.
 - 2) All bolts are 3/4", and shall meet or exceed the specifications of ASTM A 307.
 - 3) Minimum H may be less than H required for listed loads; in which case, load reductions are required.
- * When used with optional KHCST Seismic Strap, the minimum H is 12".

- 1) Allowable download shall not be further increased for duration.
- 2) The minimum height is for loads shown. For heights less than the minimum shown reduce the allowable loads in direct proportion.
- 3) All bolts are 3/4", and shall meet or exceed the specifications of ASTM A 307.

KHCST / KHCSTR Seismic Straps

Seismic straps can be installed during construction or added as a retrofit item.

Materials: See table
Finish: Primer
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.

MiTek Stock No. ³	Ref. No.	Steel Gauge	Dimensions (in)		Bolt Schedule		DF/SP Allowable Loads (Lbs.) ^{1,2}	Code Ref.
			W	L	Qty	Dia (in)		
							F1 160%	
KHCST2	--	7	3-1/2	25-5/8	4	3/4	10075	IBC, FL, LA
KHCSTR2	HCSTR2							
KHCST3	--							
KHCSTR3	HCSTR3	7	3-1/2	31-5/8	6	3/4	14685	
KHCST4	--							
KHCSTR4	HCSTR4	3	3-1/2	37-5/8	8	3/4	20145	

- 1) Allowable loads are for straps used in pairs, and are increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Loads are based on a 5-1/8" width Douglas-Fir-Larch beam.
- 3) Seismic straps shall be used with the KHC hinge connectors.

Typical KHCST installation

KHCST

TRUSS & RAFTER

TRUSS & RAFTER

242-265

Moisture Barrier Plates	244
Truss Anchors	244-250
Uplift Girder Ties	251-252, 255-259
Angles	253-254
Hurricane Ties	253, 262-265
Strap Connector	260
Truss Structural Wood Screw	260-261

Moisture Barrier Plates protect the bottom chords of trusses from moisture damage caused by direct contact with concrete. These plates eliminate the need for more expensive treated wood plates.

Materials: See table
Finish: G90 galvanizing

- Installation:**
- Install the required fasteners according to the table.
 - Pre-attach to truss bottom chord or rafter using pre-punched prongs and/or 6d common nails to prevent wood-to-concrete contact.

Typical NOP4 installation

NOP1

NOP2X

NOP4

Size	MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Fastener Schedule ¹		Code Ref.
				W	L	Qty	Type	
2x	NOP2X	TSS2, TBP8	26	1-7/16	8	--	--	--
	NOP1	--	22	1-1/2	8	2	6d	
4x	NOP4	TSS2-2	26	3-1/2	8	2	6d	

1) **NAILS:** 6d nails are 0.120" dia. x 2" long.

LPTA Embedded Truss Anchors

Low profile design attaches to 2x4 or larger bottom chords and provides uplift and lateral load resistance.

Materials: 18 gauge
Finish: G90 galvanizing
Codes: FL

- Installation:**
- Install the required fasteners according to the table.
 - Embed LPTA 4" into concrete tie beam or masonry bond beam.
 - Anchors should be spaced no closer than 8" center-to-center.
 - **Moisture barrier may be required.**

Typical LPTA perpendicular installation

LPTA

Typical LPTA parallel installation (view from inside of building)

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Load Direction to Wall Installation	Fastener Schedule ⁵		DF/SP Allowable Loads (Lbs.) ^{1,2}					S-P-F Allowable Loads (Lbs.) ^{1,2}					Code Ref.

					Parallel			1470	750	335	1085	--	1470	750	280	975	--	

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Connector shall be installed to fully grouted and reinforced masonry units (CMU) type S or better mortar or reinforced concrete ($f'_c = 2,500$ psi at 28 days).
- 3) Minimum quantity of fasteners to be installed. Product may have additional nail holes not needed to meet published allowable load of product.
- 4) The five nail holes nearest the embedment line must be filled to achieve the lateral loads listed in the table.
- 5) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

The HLPTA75 is designed and tested to provide higher lateral capacity and uplift. Offers greater pullout resistance and is compatible with bond beam reinforcing.

Materials: 18 gauge

Finish: G90 galvanizing

Codes: See table for code references

Patent: U.S. Patent No. 7,254,919

Installation:

- Install the required fasteners according to the table.
- Embed in concrete tie beam or masonry bond beam until the seat is resting on the surface.
- Minimum of one #7 rebar or two #5 rebars through the shear cone is required.
- Minimum spacing between anchors is 10" to achieve full design load capacities on single anchors.
- Designer shall verify connector clearance when using in conjunction with stirrups and two rebar applications.
- Verify grout is not in contact with truss member.

Moisture barrier may be required.

Typical HLPTA75 single rebar installation

Typical HLPTA75 double rebar installation

Typical HLPTA75 single anchor installation

Typical HLPTA75 double anchor installation

1) Allowable loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.

2) Connector shall be installed to fully grouted and reinforced masonry units (CMU) type S or better mortar or reinforced concrete (f'c = 2,500 psi at 28 days).

3) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

HTA – 16 or 18 gauge

HTAR – 16 or 18 gauge with attached moisture barrier

HHTA – 14 gauge

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options on page 247

Codes: FL

Installation:

- Install the required fasteners according to the table.
- Embed 4" into concrete tie beam or masonry bond beam.
- **For double anchor installations:** anchors should be installed on opposite sides of wood member and offset a minimum 3/4" from each other in bond beam or concrete tie beam.
- Designer may specify alternative nailing schedules. Refer to Nail Specification table on page 26 for nail shear values, load values shall not exceed published allowable loads.
- When using alternative nailing schedules, lower-most holes in strap shall be filled progressing upward towards the top of the strap.
- Straps may be installed straight or wrapped over to achieve table loads.
- Moisture barrier will be required in HTA / HHTA unless another moisture remediation method is used.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

The DHTA embedded truss anchor series offer high uplift capacity with a two-strap design. The straps are attached to MiTek's NOP style plate which ensures proper placement of straps while also providing a moisture barrier between the top of the wall and the truss.

Materials: DHTAxx-18 – 18 gauge; DHTAxx – 16 gauge

Finish: G90 galvanizing

Codes: FL

Installation:

- Install the required fasteners according to the table.
- Embed 4" into concrete tie beam or masonry bond beam.
- Designer may specify alternative nailing schedules. Refer to Nail Specification table on page 26 for nail shear values, load values shall not exceed published allowable loads.
- When using alternative nailing schedules, lower-most holes in strap shall be filled progressing upward towards the top of the strap.
- Straps may be installed straight or wrapped over to achieve table loads.
- Moisture barrier plate may be under bent during shipping causing attached straps to be misaligned. Install straps vertically at 90° from the horizontal top surface of the wall.

Typical DHTA 1-Ply installation

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Allowable loads are based on anchorage to masonry/uncracked concrete.
- 3) DF lumber may be substituted for SP with no load reduction.
- 4) Minimum specified masonry or concrete compressive strength, f'm is 1,500 psi and f'c is 2,500 psi at 28 days respectively.
- 5) The five nail holes nearest the embedment line must be filled to achieve the lateral loads listed in the table.
- 6) Minimum quantity of fasteners to be installed. Product may have additional nail holes not needed to meet published allowable load of product.
- 7) Install (8) nails into each anchor for the DHTA installation.
- 8) Height (H) is the distance the anchor extends out of concrete or masonry.
- 9) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

The DTC series attaches trusses to concrete or masonry walls. Innovative seat design gives added lateral resistance while still providing a moisture barrier.

Materials: 16 gauge
Finish: G90 galvanizing
Codes: FL

Installation:

- Install the required fasteners according to the table.
- Embed 4" into concrete tie beam or masonry bond beam.
- Installations should be spaced no closer together than 8" center-to-center.
- Straps may be installed straight or wrapped over to achieve table loads.
- Designer may specify alternative nailing schedules. Refer to Nail Specification table on page 26 for nail shear values, load values shall not exceed published allowable loads.

Typical DTC installation

Truss & Rafter

MiTek Stock No.	Ref. No.	Steel Gauge	H ⁴ (in) (Out of Concrete)	Fastener Schedule ⁵				DF/SP Allowable Loads (Lbs.) ^{1,2,3}				S-P-F Allowable Loads (Lbs.) ^{1,2,3}				Code Ref.

1) Allowable loads have been increased 60% for wind and seismic loads; no further increase shall be permitted.
 2) Connector shall be installed to fully grouted and reinforced masonry units (CMU) type S or better mortar or reinforced concrete (f'c = 2,500 psi at 28 days).
 3) Allowable loads require a No. 5 rebar through the shear cone of the anchor.
 4) Height (H) is the distance the anchor extends out of concrete or masonry.
 5) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

TA – Anchors are rated for both uplift and lateral loads. They can be installed straight or field-bent around truss or rafter members. An embossed embedment line assures accurate embedment depth.

TAR – Riveted anchors provide a moisture barrier in addition to uplift and lateral resistance all in one product.

Materials: 14 gauge

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- Embed 4" into concrete tie beam or masonry bond beam.
- **For double anchor installations:** anchors should be installed on opposite sides of wood member and offset a minimum 3/4" from each other in bond beam or concrete tie beam. See increased design values in table below.
- Designer may specify alternative nailing schedules. Refer to Nail Specification table on page 26 for nail shear values, load values shall not exceed published allowable loads.
- When using alternative nailing schedules, lower-most holes in strap shall be filled progressing upward towards the top of the strap.
- Straps may be installed straight or wrapped over to achieve table loads.
- Moisture barrier will be required in installations unless another moisture remediation method is used.

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) Allowable loads are based on anchorage to masonry/uncracked concrete.
 3) DF Allowable Loads are identical to all SP Allowable Loads listed in the table.
 4) Minimum specified masonry or concrete compressive strength, f'm is 1,500 psi and f'c is 2,500 psi at 28 days respectively.
 5) Allowable loads require a No. 4 rebar through the shear cones of the anchors.
 6) Minimum quantity of fasteners to be installed. Product may have additional nail holes not needed to meet published allowable load of product.
 7) Height (H) is the distance the anchor extends out of concrete or masonry.
 8) Double anchor installation is permitted on 1-ply roof members when anchors are offset from each other a minimum of 3/4". Do not install anchors directly back-to-back or nails will interfere with each other.
 9) Allowable uplift capacity for TA/TAR models installed with (4) 10d x 1-1/2" nails is 780 lbs per anchor. Lateral loads do not apply.
 10) **NAILS:** 10d x 1-1/2" nails are 0.148" dia. x 1-1/2" long.

The RFUS is an engineered solution for attaching trusses to concrete or masonry walls. Screw anchor fastening eliminates mislocated cast-in-place anchor bolts and allows retrofit installations.

Materials: 10 gauge

Finish: Primer

Codes: FL

Installation:

- **Always install in pairs.**
- Install the required fasteners according to the table.
- Designer shall be responsible for design of masonry structure, including any required reinforcement.
- MiTek's WS structural wood screws are included with RFUS connector.
- For 1-ply applications, add filler block. Refer to page 286 for wood filler block installation.
- **Moisture barrier may be required.**

Typical RFUS installation

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Use DeWalt 3/4" x 6" Screw-Bolt™+; or equal, installed in accordance with manufacturer's specifications.
- 3) DeWalt 3/4" x 6" Screw-Bolt™+ are not supplied with RFUS ties.
- 4) Fasteners shall be installed to fully grouted and reinforced masonry units (CMU) type S or better mortar or reinforced concrete (f'c = 2,500 psi at 28 days).
- 5) Fastener schedule is for two straps used together.
- 6) Truss plies shall be fastened together to act as a single unit.
- 7) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are supplied with RFUS connector.

UGTS – 2-screw anchor shorter design when space is limited

USC – 4-screw anchor high load design

Materials: 10 gauge

Finish: Primer

Codes: FL

Installation:

- Install the required fasteners according to the table.
- Place connector over truss or rafter and fasten with specified fasteners.
- Designer shall be responsible for design of masonry structure, including any required reinforcement.
- For 2-ply applications, add filler block. Refer to page 286 for wood filler block installation.
- Works with heel heights up to 14".
- **Moisture barrier may be required.**

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) Use DeWalt 3/4" dia. x 6" Screw-Bolt™+; or equal, installed in accordance with manufacturer's specifications.
 3) DeWalt 3/4" dia. x 6" Screw-Bolt™+ are not supplied with ties.
 4) Fasteners shall be installed to fully grouted and reinforced masonry units (CMU) type S or better mortar or reinforced concrete (f'c = 2,500 psi at 28 days).
 5) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

SHA Masonry Uplift Connectors

Connects trusses directly to masonry or concrete and features slotted base holes to ease installation.

Materials: Angle – 3 gauge; Gussets – 10 gauge
Finish: Primer

Installation:

- Install the required fasteners according to the table.
- Install flush to top of masonry wall.
- **The SHA series connectors shall be installed in pairs.**
- **Moisture barrier may be required.**

Typical SHA6 installation

SHA6

Typical SHA6T installation

SHA6T

MiTek Stock No.	Ref. No.	Fastener Schedule ³				No. of Plies ⁶	DF/SP Allowable Loads (Lbs.) ^{1,2}		Code Ref.
		Concrete Wall		Rafter/Truss ⁷			Uplift 160%	F2 160%

SHA6T	--	4	1/2	2	3/4	2-Ply	8370	1590	--
						3-Ply or greater		2190	

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Allowable loads are for a pair of SHA devices.
- 3) Fastener schedule is for a pair of SHA devices.
- 4) 1/2" x 8" J-Bolts or equivalent.
- 5) Concrete compressive strength shall be 2,500 psi or greater at 28 days.
- 6) Multiple ply truss shall be fastened together to act as a single unit.
- 7) Bolts shall conform to ASTM A 307 or better.
- 8) The designer must specify anchor bolt type, length, and embedment.

RTM Hurricane Retrofit Connector

Designed as a retrofit connector for trusses installed to masonry walls with or without a top plate. Can also be used as a hold-down for a roof or floor system.

Materials: 18 gauge
Finish: G90 galvanizing
Codes: FL

Installation:

- Install the required fasteners according to the table.
- Concrete screws are not supplied with RT16M connector.
- Install concrete screws in lower two holes for Single Top Plate or Conventional Raised Foundation or Modular Home Installations.
- **Moisture barrier may be required.**

Typical RT16M top plate installation

Typical RT16M no plate installation

RT16M

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Install with 1/4" x 1-3/4" Tapcon® Concrete Screws in accordance to manufacturer's installation specifications.
- 3) Fasteners to be installed to fully grouted and reinforced concrete masonry.
- 4) Concrete compressive strength shall be 2,500 psi or greater at 28 days.
- 5) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 16d nails are 0.162" dia. x 3-1/2" long.

HGAM10KT – Designed for attaching gable end trusses to masonry walls. For installation into grouted concrete tie beam or masonry bond beam. Provides lateral and uplift resistance.

HGA10KT – Designed for attaching gable end trusses to wood top plates. Versatile wood-to-wood connector that satisfies high wind and seismic loading requirements.

Materials: 14 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- **HGAM10KT:** Install MiTek’s WS15 structural wood screws into the truss and drill holes for screw anchors. Install screw anchors into concrete block per manufacturer’s recommendation.
- **HGA10KT:** Install MiTek’s WS3 structural wood screws into top plate and WS15 structural wood screws into the truss.
- **Moisture barrier may be required.**

 2) MiTek’s WS15 structural wood screws are 1/4" dia. x 1-1/2" long and WS3 structural wood screws are 1/4" dia. x 3" long.
 3) Use DeWalt 1/4" dia. x 1-3/4" long Screwbolt™+; or equal, installed in predrilled 1/4" hole into minimum 2,000 psi concrete compressive strength in accordance with manufacturer’s specification.
 4) The HGAM10KT is a kit with (10) HGAM10 angles packaged with MiTek’s WS structural wood screws and 1-3/4" screw anchors.
 5) The HGA10KT is a kit with (10) HGA10 angles packaged with MiTek’s WS structural wood screws.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

The LUGT series is an adaptable tiedown for girder trusses and offers several installation options to accommodate different framing conditions. It is an ideal retrofit solution to reinforce truss connections to transfer high wind loads to supporting walls and can be used on either wood framed, concrete or CMU block walls. Sizes available for 2-ply, 3-ply and 4-ply trusses.

LUGT1 – is designed for wood framed walls

LUGTC2 – is designed for corner hip trusses on wood framed walls

LUGT2, LUGT3 & LUGT4 – are designed for wood frame, concrete or CMU block walls

Materials: See table

Finish: G90 galvanizing

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- All large fastener holes must be filled with specified fasteners to achieve loads listed in the table. Smaller fastener holes are for girder-to-stud applications and do not need to be filled when used for concrete/masonry installations.
- MiTek's WS structural wood screws are included with LUGT3 and LUGT4.
- For concrete and masonry applications, a moisture barrier may be required, check local building code.

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Designer shall be responsible for design of masonry structure, including any required reinforcement.
- 3) For proper installation, the number of studs must be equal-to or greater-than the number of roof truss plies.
- 4) The LUGT1 can be installed with the stud offset from the rafter a maximum of 1" (center-to-center) for a reduced allowable uplift load of 955-lb (DF/SP) and 840-lb (S-P-F).
- 5) Fasteners must be installed in fully grouted and reinforced concrete masonry (f'm = 1,500 psi) or reinforced concrete (f'c = 2,500 psi).
- 6) Use DeWalt Screw-Bolt™+ 1/4" dia. x 3" or 3/8" dia. x 5" screw anchors; or equal, installed in accordance with manufacturer's specification.
- 7) MiTek's WS25 structural wood screws are 1/4" dia. x 2-1/2" long (supplied with LUGT3) and WS3 structural wood screws are 1/4" dia. x 3" long (supplied with LUGT4).
- 8) **NAILS:** 8d x 1-1/2 are 0.131" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d Sinkers are 0.148" dia. x 3-1/4" long,

MUGT15 Girder Tiedown

Truss & Rafter

Designed for higher uplift resistance for wood frame and concrete block construction. The MUGT15 can accommodate variable truss bearing depths.

Materials: 12 gauge

Finish: G90 galvanizing, Base Plate 3/8"

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Top-Min mounting condition: When straps are wrapped over the truss, install nails in backside of truss. See MUGT15 installation diagram for minimum nail requirements into the face, backside, and on top of the truss.
- Face-Max mounting condition: If installed straight-up with no wrap over the top of the truss, fill all nail holes.
- **Moisture barrier may be required.**

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) Epoxy be used to anchor 5/8" threaded rod when installed into an 8" wide reinforced masonry or concrete wall. With 12" minimum embedment, the MUGT15 will achieve loads listed in table. Reinforcement is to be specified by the certified designer.
 3) Designer shall be responsible for design of masonry structure, including any required reinforcement.
 4) Designer must specify anchor bolt type, length, and embedment.
 5) **NAILS:** 10d nails are 0.148" dia. x 3" long.

The HUGT series can be installed on beams and top chords of trusses with slopes from 0° to 34°.

Materials: 7 gauge, Base Plate 1/2"

Finish: Primer

Codes: FL

Installation:

- Install the required fasteners according to the table.
- Install the HUGT over the beam or truss (see "W" dimension on table for appropriate width).
- Attached members shall be designed to resist applied loads.
- **Moisture barrier may be required.**
- Install (4) LBP58-TZ washers for (2) 5/8" tension rod/ bolts for wood-to-wood installations.

- 1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Listed loads apply where roof pitch is between 0:12 and 8:12.
- 3) Designer shall be responsible for design of masonry structure, including any required reinforcement.
- 4) Designer must specify anchor bolt type, length, and holdown device.
- 5) **NAILS:** 10d nails are 0.148" dia. x 3" long.

The Universal Girder Tiedown, UGTQ, is a high capacity tiedown designed to resist uplift loads on multi-ply roof trusses. The UGTQ installs with MiTek's WS structural wood and available in left and right models for installation near the end of girders.

Features and Benefits:

- UGTQs may be installed as a single connector or in pairs
- May be installed elevated from top plate
- Can be installed on trusses and beams with top chord slopes up to 8/12
- May be used with holdown device, bearing plate or embedded/epoxy rod

Materials: 10 gauge

Finish: G90 galvanizing

Codes: FL

Patents: U.S. Patent No. 11,821,199

Installation:

- Install the required fasteners according to the table.
- MiTek's WS3 structural wood screws, 1/4" dia. x 3" long, are supplied with UGTQ tiedowns.
- Left and right connectors shall be installed as shown.
- UGTQL/R shall be installed a minimum 1/2" from the end of the supported member.
- Install UGTQ on minimum 2-ply truss/rafter (or minimum 3" thickness wood).

Typical UGTQR single installation with PHD4A

Typical UGTQL/R back-to-back installation with PHD4A

Typical UGTQR masonry installation (right shown)

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Designer shall be responsible for design of masonry structure, including any required reinforcement.
- 3) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with UGTQ connectors.
- 4) Truss/rafter plies shall be fastened together to act as a single unit.
- 5) Anchorage into concrete/masonry must be designed by a designer.

The RUSC Retro Uplift Strap Connector provides a wood-to-wood uplift connection attaching trusses with a minimum 2x4 bottom chord to a stud pack in the wall below. MiTek's WS3 structural wood screws are utilized for fast installation. The connector can be installed after roof sheathing has been installed.

Materials: 10 gauge

Finish: Primer

Codes: FL

Installation:

- Install the required fasteners according to the table.
- **The RUSC shall be installed in pairs.**
- Install on minimum 2-ply with equal wall studs centered directly below.

MiTek Stock No.	Ref. No.	Steel Gauge	No. of Plies ⁶	Fastener Schedule ^{4,5}				DF/SP	S-P-F	Code Ref.
				Qty	Rafter/Truss	Qty	Stud	Allowable Loads (Lbs.) ¹		
								Uplift 160%	Uplift 160%	
RUSC	--	10	2-Ply or greater	16	WS3	16	WS3	6040	5225	FL

- 1) Allowable loads are for a pair of RUSC devices.
- 2) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 3) Designer must specify stud or post to resist published load values.
- 4) MiTek's WS3 structural wood screws are 1/4" dia. x 3" long and are included with RUSC connectors.
- 5) Fastener schedule is for two straps used together. The RUSC shall be installed in pairs with a minimum 2-ply truss and wall stud attachment.
- 6) Truss plies shall be fastened together to act as a single unit.

WSTS Truss Structural Wood Screw

The WSTS Truss Structural Wood Screw can be used to resist uplift and lateral loads for truss/rafter-to-plate and stud-to-plate connections.

Features and Benefits:

- Head Diameter 0.330"
- Reverse thread angle on opposite ends of screw creates increased withdrawal where it's needed for higher capacity and greater uplift resistance. The shank is fully threaded along its length for installation flexibility.
- Head design countersinks out of the way of finishing materials.
- Type-17 point engages the wood quickly for easier starting and driving the screw.
- Included 6" T30* Driver Bit and Angle Tool makes proper installations easier.
- WSTS can be installed on the inside eliminating difficult installations on the outside of wall.
- Included driver bit with installation guide holds screw firmly so screw may be installed with one hand.

Materials: 3/16" heat treated carbon steel

Finish: Exterior Coat

Codes: IBC, FL, LA

Patents: U.S. Patent No. 10,823,218 (WSTS screw);
U.S. Patent No. 10,639,769 (Angle Tool)

Typical WSTS45-EXT stud to bottom plate installation

Typical WSTS6-EXT truss to top plate installation

Continued on next page

Installation:

WSTS45-EXT Installation:

- Position screw point approximately 2-3/4" from the end of the stud on the narrow or wide face. The screw point should be no closer than 1/2" from the edge. Install the screw at an angle of 22° from vertical using the angle tool.
- Drive the WSTS screw head flush to the wood surface.
- Installation angle is 15° to 25°. Use the angle tool for optimal 22° angle.

WSTS6-EXT Installation:

- The removable angle tool comes attached to the bit. Install bit onto drill.
- **Truss aligned directly over wall stud:** Position screw point where bottom of top plate and top of stud meet. Install screw at 22° angle using the angle tool.
- **Truss between two wall studs:** On the underside of the top plate, position screw in the center of the top plate and truss bottom chord. Install the screw perpendicular through the double top plate to the truss bottom chord. Drive WSTS screw head flush to the wood surface.

WSTS45-EXT

WSTS6-EXT

Angle Tool

U.S. Patent No. 10,639,769

U.S. Patent No. 10,823,218

Both WSTS45 and WSTS6 products feature a reversing asymmetrical thread angle, adding withdrawal capacity

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) Allowable loads are for WSTS screws installed in accordance with installation instructions.
 3) When the screw is to be loaded in multiple directions simultaneously, refer to note 1 in Design Notes on pages 20-21.
 4) Double top plates should be independently fastened together as required by applicable code.
 5) F1 loading is parallel to the top or bottom plate. F2 loading is perpendicular to the top or bottom plate.
 6) Designer must ensure that a continuous load path transfers the uplift loads to the foundation.
 7) Table loads do not apply to installations in trusses with end grain bearing.

These ties connect trusses and rafters to top plates and may be used to tie wood framing members to resist uplift and lateral forces.

Materials: See table

Finish: G90 galvanizing; HHCP4-TZ – G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- **TSP Min Nailing** – Fill all round holes.
- **TSP Max Nailing** – Fill all round and diamond holes.
- To achieve full allowable loads listed, fasteners must be installed as prescribed in the table.
- Depending on pitch, birdsmouth notching may be required with some models to enable installers to fill all nail holes.
- Designer shall determine if solid blocking is required.
- LFTA6, RT4, RT5, and RT7 ship in equal quantities of left and right versions. Left version images shown.

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) LFTA6: To achieve F1 lateral loads, three nails must be installed on each side on the strap located closest to the bend line. Lateral F1 and F2 load directions do not apply to roof truss-to-top plate installations.
 3) 8d common nails may be substituted for 8d x 1-1/2 nails, and 10d common nails may be substituted for 10d x 1-1/2 nails.
 4) Stainless steel ring shank nails must be used with stainless steel connectors to achieve tabulated allowable loads.
 5) Non-identical hurricane ties are not to be combined to resist the uplift force or lateral loads at a single connection location.
 6) NAILS: 8d x 1-1/2 nails are 0.131" dia. x 1-1/2" long, 8d nails are 0.131" dia. x 2-1/2" long, 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

MUS / HUS Slant Nail Truss Hangers

Plated Truss

The MUS / HUS hanger series offer double shear nailing. MiTek's raised dimple allows for 30° to 45° nailing through the joist into header, resulting in increased load capacity with fewer nails.

Materials: MUS – 18 gauge; HUS – 16 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **Slant/double shear nails must be driven in at a 30° to 45° angle through the joist or truss into the header to achieve listed loads.**
- See HUS EWP applications on page 210.

Typical HUS installation
(MUS similar)

Double shear nail design features fewer nails and faster installation

Uses standard length common nails

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long, 16d nails are 0.162" dia. x 3-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

Specialty Options Table

– refer to Specialty Options pages 320-322 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2,3}	Inverted Flange
Range	1° to 45°	1° to 45°	See Sloped Seat and Skewed	THD26 – THD210 N/A THD26-2 – THD210-3 One flange
Allowable Loads	85% of table load.	65% of table load.	65% of table load.	100% of table load. 65% of table load when nailing into the support members end grain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. THD28-2_SK45R_SQ	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. THD28-2_SL30D	See Sloped Seat and Skewed. Ex. THD28-2_SK45R_SQ_SL30D	One flange option: Add <i>IF</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. THD28-2_IFR

1) Skewed hangers with skews greater than 15° may have all joist nailing on outside flange.
 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.
 3) Some square cut hangers will require custom pricing due to welded back plate.

Materials: 12 gauge

Finish: G90 galvanizing

Options: See Specialty Options Table on page 271

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **Slant/double shear nails must be driven in at a 30° to 45° angle through the joist or truss into the header to achieve listed loads.**
- See EWP applications pages 210-212.

Typical THDH installation

THDH

Double shear nail design features fewer nails and faster installation

Typical double shear installation

Drive bend line nails into header at 45° to achieve listed loads.

Typical bend line nail installation

Some model designs may vary from illustration shown

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

2) Joist nails need to be toe nailed at a 30° to 45° angle to achieve allowable loads shown.

3) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

Specialty Options Table

– refer to Specialty Options pages 320-322 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2,3}
Range	1° to 45°	1° to 45°	See Sloped Seat and Skewed
Allowable Loads	85% of table allowable load. 50% of table uplift load.	85% of table allowable load.	52% of table allowable load. 50% of table uplift load.
Ordering	Add SK, angle required, right (R) or left (L), and square cut (SQ) or bevel cut (BV) to product number. Ex. THDH28-2_SK45R_BV	Add SL, slope required, and up (U) or down (D), to product number. Ex. THDH28-2_SL30D	See Sloped Seat and Skewed. Ex. THDH28-2_SK45R_BV_SL30D

1) Skewed THDH hangers with skews greater than 15° always have all joist nailing on one side of the outside flange.

2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist nails.

3) Skewed hangers typically require a bevel cut however, a square cut option may be available as a custom when requested.

Inverted flange option is not available for THDH models.

THDHQ Girder Truss Hangers

Plated Truss

The THDHQ hangers are designed to attach multi-ply girder trusses together using MiTek's WS structural wood screws for higher design load capacity.

Materials: 12 gauge

Finish: G90 galvanizing

Options: See Specialty Options Table

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- MiTek's WS structural wood screws are supplied with THDHQ hangers.
- See EWP applications on page 211.

Typical THDHQ28-2 truss installation

THDHQ28-2

Plated Truss

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) MiTek's WS3 (1/4" dia. x 3" long), WS45 (1/4" dia. x 4-1/2" long), and WS6 (1/4" dia. x 6" long) structural wood screws are included with THDHQ hangers.
- 3) MiTek's WS structural wood screws may be installed through metal truss connector plates as approved by truss designer per ANSI/TPI 1-2014 Section 7.5.3.4 and 8.9.2. Pre-drilling required through the plate using a maximum of 5/32" bit.
- 4) MiTek's WS structural wood screws specified for supported member must ALL be installed into the supported member while maintaining a minimum 5/8" edge distance where truss connector plates are not present.
- 5) When fastening to a multi-ply supporting truss: use MiTek's WS3 for 2-ply, WS45 for 3-ply and WS6 for 4-ply.

Specialty Options Table

– refer to Specialty Options pages 320-322 for additional details.

Option	Skewed ^{1,3}	Sloped Seat ²	Sloped / Skewed ^{1,2,3}	Inverted Flange ^{4,5}
Range	1° to 45°	1° to 45°	See Sloped Seat and Skewed	One flange option available on all sizes. Two flange option available on widths ≥ 6-9/16"
Allowable Loads	100% of table allowable load. 75% of table uplift load.	100% of table allowable load.	100% of table allowable load. 75% of table uplift load.	100% of table value. May not be installed into the support member's end grain.
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. THDHQ28-2_SK45R_BV	Add <i>SL</i> , slope required, and up (<i>U</i>) or down (<i>D</i>), to product number. Ex. THDHQ28-20_SL30D	See Sloped Seat and Skewed. Ex. THDHQ28-2_SK45R_BV_SL30D	<u>One flange option:</u> Add <i>IF</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. THDHQ28-2_IFR <u>Two flange option:</u> Add <i>IF</i> , to product number. Ex. THDHQ26-3_IF

- 1) Skewed THDHQ hangers with skews greater than 15° always have all joist fasteners on one side of the outside flange.
- 2) Sloped or sloped / skewed hangers with slopes greater than 15° may have additional joist fasteners.
- 3) Some square cut hangers will require custom pricing due to welded back plate.
- 4) The inverted flange option is not available on skewed THDHQ hangers.
- 5) THDHQ26-3 is available with both flanges inverted.

The MSH is field adjustable. The flanges can be used in top mount, face mount, or combination installations. An open back design allows installation after a member is placed in position.

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options on pages 273-274 and Nailer Options Table below

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Web stiffeners are required for I-Joist installations.

Nailer Options

– table represents maximum allowable loads for hangers used on wood nailers. Reference page 199.

MiTek Series	Nailer Size	Fastener Schedule ²					DF/SP Allowable Loads (Lbs.) ^{1,3}	SPF Allowable Loads (Lbs.) ^{1,3}
		Nailer		Joist				
		Top Qty	Face Qty	Type	Qty	Type

1) Total hanger height will be reduced by the top flange length. Carried member height must be accounted for accordingly.

Continued on next page

MSHL/R Skewed Truss Hangers

Plated Truss

The MSHL/R is a versatile 45° skewed hanger with multiple installation options. It can be installed on a supporting girder truss as well as solid-sawn and structural composite lumber headers.

Materials: See table

Finish: G90 galvanizing

Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Install fasteners into the carrying members at the locations described below based on the proper "Mounting Condition."
- Web stiffeners are required for I-Joist installations.
- Hanger is factory skewed at 45° left or right.

Typical MSH213R installation

Right skew

Typical MSH213L installation

Left skew

Right skew

Left skew

MSH213L

Left skew

MSH422L

Left skew

MSH422R

Right skew

Mounting Conditions

Face-Max

For MSH422L/R, the bottom six (6) fastener holes (three on each side of the bucket) must be filled. Install eight additional fasteners (four (4) in each strap) where applicable. For MSH213L/R, the bottom eight (8) fastener holes must be filled (four (4) in each strap). Install fourteen (14) additional fasteners, seven (7) in each strap. Min. 2x6 bottom chord required.

Typical MSHL/R face-max installation

Top-Max

The straps must be field-bent over the header a minimum of 2" to allow four (4) top flange nail holes to be filled (two in each strap). The bottom six (6) fastener holes (three on each side of the bucket) must be filled. Min. 2x6 bottom chord required.

Typical MSHL/R top-max installation

Top-Min

The straps must be field bent over the header a minimum of 2" to allow four (4) top flange nail holes to be filled (two in each strap). Also install the two (2) uppermost face nails (one on each strap) near the top of the header.

Typical MSHL/R top-min installation

Combination Face-Max/Top-Max

Follow the Face-Max installation for one side of the connector and the Top-Max installation for the opposite side of the connector. The Face-Max allowable loads apply to this type of installation. Min. 2x6 bottom chord required.

Typical MSHL/R combination installation

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

2) **NAILS:** 10d x 1-1/2" nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

MiTek's MSSH217 hanger accommodates a skew range of 60° to 85° (30° maximum off the girder) without the need for a more expensive custom design hanger. Face nail to webs or bend the flange strap over the chord. Available in left (L) or right (R) configurations.

Materials: 18 gauge

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- The 3 lower holes on each strap are for top nailing when the strap is bent over the truss chord. These holes are not for face nailing.
- One or both straps may be bent over the bottom chord of the girder with top or backside nailing.
- **Note:** Select the correct (right or left) hanger so that the strap on the outside of the angle will pass the end of the truss. When facing the hanger, the strap in the rear turns in the direction of the skew. The front strap turns to pass behind the end of the carried member.
- Attach the hanger at the end of the truss with a single 10d (0.148" dia.) x 1-1/2" nail into the side flange or bottom.
- Place the truss in position against the girder. Push the outside strap past the end of the truss to the girder web and face nail through the top 8 holes with 10d (0.148" dia.) x 1-1/2" nails for a 1-ply girder, or 10d (0.148" dia. x 3") common nails for multiple-ply girders.
- The strap inside the angle can be formed over diagonal webs (if design allows) or bend over the girder chord. Use two nails into the top and/or back side of the girder.
- If the outside strap does not contact a web, bend the strap tightly over the girder chord. Use two nails into the top and/or back side of the girder.
- For uplift resistance, other means of attachment are required. SNP3 may be used for uplift resistance, see SNP3 page 279 for installation options. Where verticals on truss and girder are aligned, SNP3 may be installed on verticals provided there is sufficient wood for fastening requirement

1) No uplift value with this hanger. Use other hardware or nailing higher on supported member to counteract uplift.
 2) One or both straps may be bent over bottom chord of girder with top or backside nailing.
 3) Maintain minimum 3/4" edge distance when installing nails.
 4) The supported member shall be supported by blocking or other means to prevent rotation.
 5) **NAILS:** 10d x 1-1/2" nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.
Note: The 3 lower holes on each strap are for top nailing when strap is bent. These holes are not for face nailing.

MiTek's MSHA Series hanger offers the most flexible field solution for truss-to-truss connections accommodating a range of skews and challenging web-chord geometry often found in truss framing. Eliminating the need for special orders, the MSHA Series hanger provides economical solutions for 1-ply or 2-ply roof trusses and 1-ply floor trusses skewed between 22-1/2° to 75°. MSHA hangers can be installed in top-min, top-max, face-max, or combination mounting conditions as required.

Materials: 16 gauge
Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- Install fasteners into the carrying member at the locations described below based on the proper "Mounting Condition".
- Product is factory skewed 22-1/2° and may be field skewed from 22-1/2° to 75°. See installation sequence on page 279 for skews greater than 22-1/2°.
- Face-Max and Combination mounting conditions require a minimum chord or header height of 7-1/4". Top-Max and Top-Min mounting conditions require a minimum chord or header height of 5-1/2".

MSHA29L
Left Shown

MSHA29R-2
Right Shown

CONNECTION TO CARRYING MEMBER
Mounting Conditions:

Face-Max

Fill the lowest four holes nearest each side of the bucket. For a 22-1/2° skew, fill the four diamond holes on one side and 4 round holes on the other. For skews greater than 22-1/2°, fill the 4 round holes on each side.

Add an equal amount of nails in each side of the hanger in any of the remaining nail holes to meet the minimum fastener requirements listed in the table on page 279.

Typical MSHA
face-max installation

Top-Max

Field bend the strap over the supporting member. The bent strap must extend a minimum of 2" over the carrying member to allow for the four top flange nail holes to be filled.

Fill the lowest four nail holes nearest each side of the bucket. For a 22-1/2° skew, fill the four diamond holes on one side and 4 round holes on the other. For skews greater than 22-1/2°, fill the 4 round holes on each side.

Typical MSHA
top-max installation

Top-Min

Field bend the strap over the supporting member. The bent strap must extend a minimum of 2" over the carrying member to allow for the four top flange nail holes to be filled.

Fill the four nail holes (two each strap) nearest the top of the carrying member.

Typical MSHA
top-min installation

Combination
Face-Max/Top-Max

Follow the Face-Max installation for one side of the connector. Follow the Top-Max installation for the opposite side of the connector. The Face-Max allowable loads apply to this type of installation.

Typical MSHA
combination installation

CONNECTION TO CARRIED MEMBER
Mounting Conditions:

For the 22-1/2° skew installation, all round and diamond holes in the bucket must be filled. For skews greater than 22-1/2°, only the diamond holes in the bucket must be filled.

Plated Truss

Installation Sequence for Skews greater than 22½°:

Step 1: Install acute side top and/or face header nails.

Step 2: Utilizing a piece of scrap fastened to the hanger on the obtuse side, bend the hanger to the desired angle.

Step 3: Bend the obtuse side of hanger back toward the header until the flange lies flat against the header, and install header top and/or face nails as noted below.

Step 4: Install carried truss and all required nails working from the bottom up.

1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) H_{eff} is the minimum distance from the top of the hanger seat to the top of the carrying member.
 3) For tabulated top-mount installation loads, the straps must be wrapped over the header a minimum of 2".
 4) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

The SNP3 Skewed Nail Plate is designed for connecting square cut corner jack trusses at skews from 0° to 90°, as depicted in standard installation below. An alternate installation for front side attachment at skews 0° to 45° is also depicted below.

Materials: 16 gauge

Finish: G90 galvanizing

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- **Bend angle only once.**
- 8d common (0.131" dia. x 2-1/2" long) nails may be used in lieu of 8d (0.131") x 1-1/2" nails with no reduction in load.

Typical Installation:

- Attach the SNP3 to the supported truss on the acute angle side so the SNP3 runs behind the end of the jack truss. Use all the specified fasteners listed in the table below. The fasteners should be installed nearest to bend line as possible then working to the opposite end of flange. Not all nail holes will be filled.
- Set the jack truss against the supporting truss and nail the exposed flange of the SNP3 into place. Use all the specified fasteners listed in the table below. The fasteners should be installed nearest to bend line as possible then working to the opposite end of flange. Not all nail holes will be filled.

Alternate Installation:

- Attach the SNP3 to the supported truss on the obtuse angle side so the SNP3 is on the front side of the jack truss. Use all the specified fasteners listed in the table below. The fasteners should be installed nearest to bend line as possible then working to the opposite end of flange but no closer than 5/8" from the end of the truss. Not all nail holes will be filled.
- Set the jack truss against the supporting truss and nail the exposed flange of the SNP3 into place. Use all the specified fasteners listed in the table below. The fasteners should be installed nearest to bend line as possible then working to the opposite end of flange. Not all nail holes will be filled.

Typical SNP3 standard installation

Alternate SNP3 installation

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 2) Install specified fasteners from the bend line out from each end. Not all nail holes will be filled.
 3) When installing SNP3's back to back, the table loads shall be multiplied by a reduction factor of 0.78.
 4) Refer to images for installation type.
 5) **NAILS:** 8d x 1-1/2 nails are 0.131" dia. x 1-1/2" long.

HHC – Designed to support hip/hip truss/rafter. Contact MiTek when using in multi-ply applications

HJHC – Allows for hip/hip support and hip/jack/hip installations

HJC / HTHJ – Used to simultaneously hang a combination of hips and jacks off girder trusses. These hangers fit both left-hand and right-hand applications. An open back design allows for retrofit installations

Materials: HHC/HJC/HJHC – 12 gauge, HTHJ –18 gauge

Finish: G90 galvanizing

Options: See HJC Specialty Options Table below

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.

BN Breakfast Nook Hangers

Plated Truss

Designed to carry four mono trusses in one connector, it reduces installation time and cost. Provides a tested, load rated connection. Standard configuration spacing: 22-1/2°, 45°, 45°, 45°, 22-1/2°. The design also includes field adjustable nailing tabs.

Materials: 14 gauge
Finish: Primer
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Allow a 2" setback for each mono truss.
- For pitched ceiling, design mono trusses with end-vertical upset. Upset equals tangent of the ceiling slope times 5.6".
- **Bend tab only once.**

Plated Truss

The GTWS series girder-to-girder hangers feature high uplift capacities along with high gravity load ratings.

Materials: 10 gauge

Finish: G90 galvanizing

Codes: FL

Installation:

- Install the required fasteners according to the table.
- MiTek's WS structural wood screws are included with hangers where specified.
- **GTWS2T** shall be installed to a minimum 2x4 vertical member of a girder truss with no restriction on the size of the bottom chord.
- **GTWS3T** shall be installed to a minimum 2x6 vertical member of a girder truss with no restriction on the size of the bottom chord.
- **GTWS4T** shall be installed to a minimum 2x8 vertical member of a girder truss with no restriction on the size of the bottom chord.

Supported truss end vertical min 2x6 required. Ensure truss plate is installed flush to the bottom and the end of the truss, min 3" coverage from member end (to resist lumber end splitting).

Typical GTWS installation

Note: on supported and supporting truss: ensure full truss plate coverage over the seam where truss members intersect.

GTWS2T

- 1) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) MiTek's WS3 structural wood screws require a minimum 3" wood penetration.
- 3) MiTek's WS3 (1/4" dia. x 3" long) structural wood screws are included with the GTWS hangers.
- 4) MiTek's WS3 structural wood screws may be installed in both vertical and horizontal members.

GT / GTD / GTS Girder Truss Hangers

Plated Truss

The GT primarily hangs girder trusses off other girder trusses, although a wide variety of other heavy-duty installations apply.

Materials: Back Plate – 3 gauge; Strap – 7 gauge

Finish: Primer

Options: All models available in LVL sizes, use M in place of T, as in GT2M4B

Codes: See table for code references

Installation:

- Install the required fasteners according to the table.
- Minimum heel height is 9-1/4" for GT hangers.

Typical GT2T4B installation

1) Allowable loads for GTS and GTD is the total of hip and jack connection.
 2) Bolts shall conform to ASTM A 307 or better.
 3) GT Series require 2 x 6 vertical member for 2, 3, and 4 bolt hangers and 2 x 8 for 6 and 8 bolt hangers.
 4) All side pocket applications assume 45° angle.
 5) Must specify right or left for all GTS and GT skewed.
 6) NAILS: 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 16d nails are 0.162" dia. x 3-1/2" long.

The GTQ / GTQM hangers connect to multi-ply girder truss with MiTek's WS structural wood screws offering high load capacities. Design features minimum and maximum fastening installation options to accommodate various sizes of vertical web. GTQMs are designed for LVL sizes, for example GTQM218.

Materials: 7 gauge

Finish: G90 galvanizing

Installation:

- Install all MiTek's WS structural wood screws as specified.
- Install hanger centered on vertical web.
- GTQs are designed to be installed on various sizes of vertical web. Maintain a minimum 5/8" fastener edge distance where truss connector plates are not present.
- Install MiTek's WS structural wood screws in all fastener holes including diamond holes for maximum values.
- Refer to Backer Block installation on page 287 if the length of the screws going into the supporting truss are longer than the thickness of the plies.

Plated Truss

Copyright © 2024 MiTek, Inc. All Rights Reserved.

1) MiTek's WS3 (1/4" dia. x 3" long), WS45 (1/4" dia. x 4-1/2" long, and WS6 (1/4" dia. x 6" long) structural wood screws are included with GTQ and GTQM hangers.
 2) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 3) MiTek's WS structural wood screws may be installed through metal truss connector plates as approved by truss designer per ANSI/TPI 1-2014 Section 7.5.3.4 and 8.9.2. Pre-drilling required through the plate using a maximum of 5/32" bit.
 4) Truss plies of the supporting member must be fastened together to transfer the load (through all truss plies) that is not transferred by the hanger screws; fastening schedule is to be specified by the truss designer.
 5) If the length of the screws going into the supporting truss are longer than the thickness of the plies, refer to the backer block installation on page 287.
 6) MiTek's WS structural wood screws specified for supported member must all be installed into the supported member while maintaining a minimum 5/8" edge distance where truss connector plates are not present.
 7) Supported members on GTQM hangers shall have specific gravity of not less than 0.46.
 8) Wind (160%) is a download value.

Design of Filler Blocking with MiTek Hangers

Filler blocking should only be used as a last resort, when the supported members width is less than the supporting hanger width. If possible a solid piece of the same species as the main supported member should be used, if this is not possible, APA rated plywood or OSB may be used.

MiTek allows for 1/8" of space between the supported member and the hanger sides.

The filler blocking should be attached with enough fasteners to support the bearing area of said member in the bucket. These fasteners are separate from the joist fasteners specified in the hanger connection. Please reference the fastener values and spacing below to aid in your design.

When possible filler blocking shall be placed on both sides of a multi-ply supported member in order to minimize eccentric loading of the connector. Filler blocks should not extend more than 12" from the supporting member. If you are unable to meet these requirements please reach out to MiTek customer service for assistance.

Nail	Filler Block Thickness (in)	Shear Strength (Lbs.)							
		Side member Specific gravity = 0.50				Side member Specific gravity = 0.42			
		Main Member Species or Equivalent SG				Main Member Species or Equivalent SG			
		0.42	0.46	0.50	0.55	0.42	0.46	0.50	0.55
10d Common (0.148")	3/8	78	82	85	88	71	74	76	79
	7/16	80	84	87	90	72	75	77	80

	19/32	102	107	110	114	89	93	95	98
	23/32	110	115	118	122	94	98	100	103
1	129	135	141	146	109	113	115	118	

- 1) Nails need 10 times the diameter of embedment into main member.
- 2) Values are good for solid sawn lumber or SCL wood structural side members.
- 3) Data is derived from table 12Q, 12R & 12S of the 2018 NDS.
- 4) 1-1/2" side members assume a specific gravity equal to that of the main member.

Example:

2x12" filler block with a specific gravity 0.50 added to THDH26-2 supporting DF (SG = 0.50) truss. Supported member design reaction is 4000 lbs. Bearing width of the filler block as a percentage of the total bearing area of the supported member. @ 100% DOL.

$$\frac{(1-1/2")}{3"} = 50\%$$

Filler bearing area percentage x total load applied to connector.
0.50 * 4000 lbs. = 2000 lbs.

Nails selected are 10d common, number of nails needed to attach each filler block = $\frac{2000 \text{ lbs.}}{118 \text{ lbs. per nail}} = 17$ additional nails minimum to attach each filler block to main member.

End Distance: 15 x Diameter (Dia.)
Edge Distance: 2.5 x Dia.
Spacing Between fasteners in a Row: 15 x Dia.
Spacing Between staggered rows: 2.5 x Dia.

Nail spacing per NDS
Note: Dimensions on the figure are minimums and may not be to scale

Load capacity of THDH26-2 with DF supporting member = 4375 lbs. @ 100%

Design of Backer Blocking for MiTek Connectors and Trusses

Backer blocking is used when a supporting members thickness is less than the length of fastener specified in official MiTek literature. The purpose of this guide is to help the designer by specifying nail/screw quantities and minimum spacing distances. Backer blocking should be of the same species of lumber as the main member. The height of the backer blocking must be equal-to or greater-than the height of the hanger. When the backer block spans multiple connection points, and a splice in the backer block is required it should be placed between two connections.

For hangers installed with nails, attach backer block with a minimum of (8) - 10d common (0.148" x 3") nails. For hangers installed with MiTek Wood Screws (WS), attach backer block with one WS3 screw for every two WS screws attaching the hanger to the supporting member. For hangers installed with 16d common (0.162" x 3.5") nails using a backer block, the allowable load is reduced 15 percent.

Note: Backer block nails or screws can be installed from either face and should be split evenly between each side of connection. Backer blocking should be of adequate length to meet minimum distances as shown below.

Nail Backer Block Distances

End Distance: 15 x Diameter (Dia.)
 Edge Distance: 2.5 x Dia.
 Spacing Between fasteners in a Row: 15 x Dia.
 Spacing Between staggered rows: 2.5 x Dia.

Nail spacing per NDS

Note: Dimensions on the figure are minimums and may not be to scale

Screw Backer Block Distances

End Distance: 2-1/2"
 Edge Distance: 1-1/2"
 Spacing Between fasteners in a Row: 3"
 Spacing Between staggered rows: 1-1/4"

Spacing per ICC-ESR #2761

Note: Dimensions on the figure are minimums and may not be to scale

Example: The THDHQ28-2 shown above has (20) WS3 screws connecting it to the supporting truss. Using the instructions detailed above, (10) WS3 screws must be attached from the supported truss to the backer block to be in compliance with the instructions above to support the applied allowable load of the THDHQ28-2.

Panel Point Installation

- Connection with face mount hanger attaching to a truss panel point.
- Ensure framing lumber is present behind connector plates. Nails that do not penetrate lumber will be neglected and will not contribute to the connection capacity.

THD28-2

Truss Brace & Spacer (Stabilizer™)

Plated Truss

The Stabilizer™ Truss Brace & Spacer provides temporary construction bracing in the roof and ceiling planes, as well as permanent lateral bracing for webs as specified by the truss designer.

The Stabilizer™ is easily installed by embedding the patented MII 20 teeth on the top flange straight into the edge of the truss member to be braced with a framing hammer. The side tabs are then secured by driving the teeth into the face of the truss member being braced.

Materials: 20 gauge
Finish: G90 galvanizing
Codes: IBC, LA, FL

Installation:

- Use 31-24 for standard 24" o.c. spacing. For odd spacing, cut and insert a solid block between the trusses.
- Typically, The Stabilizer™ is installed at 6'– 8' centers along the roof plane and 10'– 15' along the ceiling plane. (Refer to engineering specifications BCSI 1-03, published by The Truss Plate Institute for specific bracing requirements.)
- The Stabilizer™ must be supplemented with diagonal bracing in the roof and ceiling planes and cross bracing in the web plane at required intervals.
- Web forces are not to exceed 8000 lbs.
- The Stabilizer™ is properly installed when the top flap and side tabs are flush with the member being braced.

Temporary construction bracing installation

31-24 Stabilizer™

Side view

Top view

End view

Important: The erection contractor is responsible for determining and installing the temporary bracing for the structure, including the trusses. It is most important for the installer to provide adequate means for bracing the first truss installed. The performance of the entire bracing system depends on the adequacy of the ground bracing or other means of bracing the first group of trusses installed. The building designer is responsible for the permanent bracing design of the overall structure including the truss. This includes the design of required supplemental diagonal and cross bracing.

Truss spacers give framers fast and accurate spacing for trusses, rafters, or floor joists. The TS and TSX eliminate the need to mark layouts on bearing plates, improve installation speed, and help eliminate spacing errors. These spacers are light weight and compact.

Materials: See table

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- Use (1) 8d nail per end to fasten units to trusses, rafters, or floor joists.

Important: These units provide spacing guides only. Do not rely on the TS or TSX for bracing.

Typical TSX installation

TSX multi-unit spacer

Typical TS installation

TS single-unit spacer

Joist Width (in)	MiTek Stock No. ¹	Ref. No.	Steel Gauge	O. C. Spacing	Overall Length	Sections Per Piece	Fastener Schedule		Code Ref.

1) Allowable load shall not be increased for other load duration factors.

2) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

Use the SBP instead of extra truss plies or nail-on scabs to distribute concentrated truss reactions and avoid top plate crushing. The two-piece design accommodates any number of girder plies. A wraparound design gives superior uplift resistance, and reinforcement ribs effectively distribute bearing loads. Works with both single and double 2x4 or 2x6 top plates.

Materials: 16 gauge
Finish: G90 galvanizing
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- **The SBP shall be installed in pairs.**

Typical SBP standard installation

- 1) Fastener Schedule is for a pair of SBP devices.
- 2) Allowable loads are for a pair of SBP devices. SBPs shall be installed in pairs.
- 3) Multiple ply trusses shall be fastened together to act as a single unit.
- 4) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 5) Where truss sits on a single top plate, 10d x 1-1/2 nails may be used on the top side of the top plate.
- 6) Other connector models are not to be combined with SBP to resist the uplift force or lateral loads. For special considerations, consult MiTek Engineering Services.
- 7) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

FTC / FTCF Floor Truss Clips

Plated Truss

FTC clips slide easily onto the top or bottom chord and provides a guide to help position and support the second truss during assembly

FTCF clips easily install after the trusses are installed

- Materials:** 18 gauge
- Finish:** G90 galvanizing
- Codes:** IBC, FL, LA
- Patents:** U.S. Patent No. 5,653,079

Installation:

- Install the required fasteners according to the table.
- The truss designer must determine the number of clips required and the spacing between clips based on loading conditions.

Typical FTC installation

FTC

Typical FTC 2-ply metal web truss installation

Step 1

Typical FTC2F retrofit installation

Step 2

Concentrated Load Condition: (side load attached to 2-ply truss):

The FTC clips shall be installed in pairs, or multiples of two, on either side of, and within 12" of a concentrated load.

Divide half of the concentrated load by the clip load transfer capacity to determine the number of clips required.

Example:

Concentrated (point) load = 3000 lbs, FTC1 capacity (DF/SP) = 865 lbs

$$\frac{1/2 (3000 \text{ lbs})}{865 \text{ lbs}} = 1.73 = 2 \text{ clips}$$

Place 2 clips near concentrated load

Uniform Load Condition: (side load attached to 2-ply truss):

To transfer uniform loads to the second ply, the FTC clips shall be installed at a regular interval along the loaded chord. Spacing between clips is limited to 24" maximum.

Divide the clip load transfer capacity by half the required load per lineal foot (PLF) to determine the spacing between clips.

Example:

Uniformly (distributed) load = 500 PLF, FTC1 capacity (DF/SP) = 865 lbs

$$\frac{865 \text{ lbs}}{1/2 (500) \text{ PLF}} = 3.46' \text{ spacing}$$

Since 3.46' is greater than 24" (MAX), space clips at 24" along the loaded chord.

FTCF

Truss Size	MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)			Fastener Schedule ³		DF/SP Maximum Transfer Loads ^{1,2}	S-P-F Maximum Transfer Loads ^{1,2}	Code Ref.
				W1	W2	H	Qty	Type			
3 x 2	FTC32	--	18	2-1/16	2-1/2	1-1/2	10	10d x 1-1/2	680	590	IBC, FL, LA
4 x 2	FTC1	--	18	3-1/2	3-1/16	1-1/2	10	10d	865	750	
	FTC1F	--	18	3-1/16	--	4-3/8	10	10d	865	750	
(2) 4 x 2	FTC2	--	18	3-1/2	3-1/16	3	10	10d	865	750	
	FTC2F	--	18	3-1/16	--	4-3/8	10	10d	865	750	

1) Transfer loads are for 100% floor load, and shall not be increased for short term load duration.
 2) Truss designer shall determine the number of clips for concentrated loads and the spacing for uniform loads.
 3) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

VTT Valley Truss Tie is designed to transfer loads from a valley truss into the supporting structure below. It also resists the sliding forces from downward loads when the valley truss is set upon a sloped lower roof. The ability to resist the sliding force eliminates the need for support wedges under the valley truss bottom chord or special order valley roof trusses with a bevel-cut bottom chord.

- Double-dimple nail holes assure the nails are driven in at the correct angle into the supporting member every time.
- Flat design requires no field bending to match the supporting roof pitch.
- 2-Ply steel with stiffening ribs provides a high resistance to sliding forces from downward loads.
- Prong teeth help hold the VTT in place while nailing.
- Accommodates supporting roof pitches from 0/12 to 12/12.
- Pitch guide embossments allow attachment to valley truss on ground.

Materials: 18 gauge

Finish: G90 galvanizing

Patents: U.S. Patent No. 9,920,514 B1

Installation:

- Install the required fasteners according to the table.
- Mark the location of the supporting truss located below the lower roof sheathing.
- Place the VTT flat against the valley truss, centered over the top chord of the truss below. Tap the top edge down with a hammer to engage the prong teeth.
- Nail the VTT to the bottom chord of the valley truss using (3) 10d (0.148") x 1-1/2" nails.
- Install (3) 10d (0.148" x 3") common nails through the double-dimples and drive them through the sheathing into the top chord of the supporting truss below. One nail will be centered in the top chord below. The other two nails are driven in at preset angles guided by the dimple holes.

Alternate Installation for Ground/Pre-Placement of VTT

- Install the required fasteners according to the table.
- Mark the location of the supporting truss located below the lower roof sheathing. Center VTT horizontally on that mark.
- Use pitch guide embossments on part to locate the vertical position of VTT. Pitch numbers on connector are the numerator in the pitch slope ratio. (i.e. "6" indicates a 6/12 pitch, "12" indicates a 12/12 pitch, etc.)
- Secure the VTT to valley truss with (3) 10d (0.148") x 1-1/2" nails.
- When valley truss is hoisted into proper position on roof, install (3) 10d (0.148" x 3") common nails through the double-dimples and drive them through the sheathing into the top chord of the supporting truss below. One nail will be centered in the top chord below. The other two nails are driven in at a preset angles guided by the dimple holes.

The STC provides uplift resistance by securing trusses to top plates. Slotted nail holes allow for horizontal movement as scissor trusses deflect.

Materials: 12 gauge
Finish: G90 galvanizing
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Do not fully set truss nails into slots.
- Install truss nails on interior edge of slot to allow horizontal movement up to 1-1/4".

Typical STC installation

STC

- 1) Loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Truss/Rafter must be bearing on top plate to achieve the allowable loads under "Without Gap".
- 3) When installed with maximum 1-1/4" space between truss/rafter and top plate, use loads under "With 1-1/4" Gap".
- 4) To achieve F1 loads in both directions, clips must be installed on both sides of the truss and nails staggered to avoid nail interference.
- 5) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

T10 Hoist Plates

The T10 Hoist Plate is engineered with a reinforced collar around the hoist hole for added strength. Install with MiTek's LL930 LumberLok Exterior Structural Connector Screws for greater uplift while allowing for easy removal of the connection after the hoisted member is in place.

Materials: 14 gauge
Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- Fill all fastener holes that align with the wood. The minimum quantity is listed in the table below.
- MiTek's LL930 screws are #9 (0.131" diameter) x 2-7/8" long.
- Install LL930 screws using a low speed clutch drill with T20* drive (not included). The washer head should be flat to the surface. Do not over-tighten the screws.
- **Impact drivers are not recommended for use with LumberLok Screws.**

FS / FSS Truss Field Splice Kits

Plated Truss

Job site splicing of long trusses is made easier with Truss Field Splice Kits. The FS and FSS (for scissors trusses) includes a pair of plates, bolts, nuts, and a Splice Clip for top chord alignment. Allowable loads are sometimes limited by tension in the net section of the wood. Choose the bottom chord size and species that will satisfy the tension requirement. Analyze tension in the web to determine the required size.

Materials: FS/FSS – See table, bolts, and nuts included Splice Clip – 12 gauge

Finish: FS & FSS – Primer; Splice Clip – Primer; Bolts – zinc plating

Installation:

- Install the required fasteners according to the table.
- Position the two trusses, center one splice plate on the bottom chords and clamp in place for a drilling template. Install the Splice Clip at the top truss plate and fasten with (18) 10d (0.148" dia) x 1-1/2" nails. Drill through the bottom chord using splice plate as a template. Place splice plate on each side and bolt the connection firmly.

Typical FSS and Splice Clip installation

1) Allowable loads shall not be increased for other load duration factors.
 2) Allowable loads are based on the lesser of the calculated bolt loads and the calculated wood tensile strength at the critical net section.
 3) Wood tensile strengths are based on the Ft of 450 psi for S-P-F, 575 psi for DF-L, and approximately 540 psi for SP; and increased by the size factors in accordance with the NDS®.
 4) Bolts shall conform to ASTM A 307 Grade A or better.

ADTT-TZ is an Adjustable Deck Tension Tie designed to effectively transfer the out of plane lateral loads of the deck to the house structure exceeding "Hold-down Device" requirements per 2021 IRC, Section 507.9.2 [Figure R507.9.2(2)].

Features:

- Adjustable design allows lag screw installation at variable distance below deck joist
- 2-hole break-out washer (BO-W) will work with multiple screw sizes
- Blocking extensions not required

Materials: 14 gauge

Finish: G-185 galvanizing

Codes: See table for code references

Patents: U.S. Patent No. 9,809,974

Installation:

- Install the required fasteners according to the table.
- Install with MiTek WS8-EXT structural wood screw or 3/8" HDG lag screw. WS8-EXT or 3/8" HDG lag screws may be installed adjacent or up to 4-3/8" below deck joist (see Figure A).
- The WS8-EXT screw will utilize the smaller hole and a 3/8" HDG lag screw uses the larger hole. Thread the screw through BO-W and the large 7/16" hole at the base of the ADTT-TZ.
- Drive screw horizontally and aligned vertically with the deck joist into the wall top plate of the main (house) structure.
- Install four (4) of the specified joist fasteners into vertical legs. (Two (2) on each side of deck joist).
- Secure front brace with six (6) specified joist fasteners.
- Re-tighten the WS8-EXT or 3/8" HDG lag screw as needed to fully engage with the ADTT-TZ. **DO NOT OVERDRIVE.** Note: Minimum 3" thread penetration required for proper installation of WS8-EXT or HDG lag screw.
- For detailed installation instructions refer to MiTek-US.com.

Typical ADTT-TZ extended installation

1) Allowable loads are for the ADTT-TZ installed tight to the bottom of the joist (Contracted) or 4" from bottom of joist to ADTT-TZ bend line (Extended).

2) Deflections are derived from static, monotonic load tests of devices connected to DF wood members with specified fasteners.

3) WS8-EXT is a 1/4" dia. x 8" long screw sold by MiTek and must be ordered separately if not purchasing the kit. The minimum thread penetration into the top plate of the wall framing is 3".

4) 3/8" HDG Lag Screw is an ASTM A307 Grade A lag screw with a thread diameter of 3/8" and is hot-dip galvanized to ASTM A153 standards. The minimum thread penetration into the top plate of the wall framing is 3". Lag screws are available at your local hardware store and must be purchased separately.

5) Check with your siding manufacturer for recommendations for fastening through your siding material.

6) LL915 denotes a MiTek LumberLok Screw (#9 x 1-3/8" long) and must be ordered separately if not purchasing the kit.

7) ADTT-TZKT is a kit with (4) ADTT-TZ packaged with MiTek WS8-EXT structural wood screws and LL915 LumberLok screws.

8) **NAILS:** 10d x 1-1/2" nails are 0.148" dia. x 1-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

Deck Tie Back reinforces the connection of rail posts to a deck. Also provides lateral strength of deck through ledger attachment by securing deck to house framing.

Materials: 14 gauge

Finish: G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA, IRC R507.1

Installation:

- Install the required fasteners according to the table.
- Install with MiTek's THR 1/2" threaded rod or equivalent.
- Drive MiTek's WS15-EXT structural wood screws into joist.
- Re-install threaded rod or anchor bolt. Secure with washer and nut.
- Tighten anchor bolt nuts finger tight to base plus 1/3 to 1/2 additional turns with wrench.

Typical DTB-TZ rail post installation

DTB-TZ

Typical DTB-TZ deck through ledger installation

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)				Fastener Schedule				Allowable Loads (Lbs.)			Corrosion Finish	Code Ref.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

The CSH-TZ concealed stringer hanger provides a method of connecting a stair stringer with a hidden hanger. The seat of the hanger is adjustable to match the slope of the stair stringer.

The reversible design allows the connector to be used on the left, right, or interior stringers. The CSH-TZ may be used with MiTek's SCA Stair Angles for a complete, easy-to-use stair framing solution.

Materials: 18 gauge

Finish: G-185 galvanizing

Options: See table for Corrosion Finish Options

Codes: IBC, FL, LA

Patents: U.S. Patent No. 7,631,463

Installation:

- Install the required fasteners according to the table.
- **Bend angle only once.**

Steps:

1. Attach CSH-TZ to header with tabs positioned towards the inside of the stringer member.
2. Adjust the seat of the CSH-TZ to match the slope of the stringer member. Diamond shaped holes in the connector allow temporary installation of wood screws to aid in installation of the CSH-TZ.
3. Install 10d (0.148") x 1-1/2" HDG nails into the stringer and rim/band joist. Not all nail holes will be filled.

MiTek Stock No.	Ref. No.	Steel Gauge	Fastener Schedule ^{2,3}					DF/SP Allowable Loads (Lbs.)				S-P-F/Hem Fir Allowable Loads (Lbs.)				Corrosion Finish	Code Ref.
			Rim/Band Joist		Stringer			100%	115%	125%	Uplift 160%	100%	115%	125%	Uplift 160%		
			Qty	Type	Wide Face Qty	Narrow Face Qty	Type										
CSH-TZ	LSCZ	18	8	10d x 1-1/2 HDG	4	1	10d x 1-1/2 HDG	875	875	875	370	695	695	695	295	IBC, FL, LA	

- 1) Uplift loads are increased 60% for wind or seismic loads; no further increase shall be permitted.
- 2) Stainless steel ring shank nails must be used with stainless steel connectors to achieve tabulated allowable loads.
- 3) **NAILS:** 10d x 1-1/2 HDG nails are 0.148" dia. x 1-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

Stair angles simplify stair construction. There is no need to calculate and notch stair stringers. Stronger and safer than wood blocking, and the angle and fasteners are hidden from view.

Materials: 12 gauge

Finish: G-185 galvanizing

Options: See table for Corrosion Finish Options

Installation:

- Install the required fasteners according to the table.
- MiTek WS15-EXT (1/4" dia. x 1-1/2" long) structural wood screws are not supplied with SCA angles.
- Use the SCA9-TZ for single 2x10 stair treads. Use the SCA10-TZ for double 2 x 6 stair treads.
- To calculate stair construction do the following:
 1. Find the number of steps needed by dividing the vertical drop in inches from the deck surface to grade by 7. Round off to the nearest whole number. (Ex: Vertical drop of 39" divided by 7" equals 5.57 rounded off is 6)
 2. Find the step rise by dividing the vertical drop by the number of steps (39" divided by 6 = 6.5")
 3. Find the step run by measuring the depth of your tread board (Ex: (2) 2x6s with 1/4" gap will have a run of 11-1/4"). Not all nail holes will be filled.
 4. Find the stairway span by multiplying the run by the number of treads minus one (Ex: 11-1/4" x 5 = 56-1/4")
- Using the above calculations, mark stair angle locations on each stringer. Attach a stair angle to the inside of each stringer at the marked locations. Attach stringers to deck rim joist and railing posts. Position treadboards on angles and fasten from below.

Typical SCA9-TZ installation

SCA9-TZ

Typical SCA10-TZ installation

PRT15-TZ – is for 1-5/8" vertical pipe posts (1-7/8" outside pipe diameter). Can be field bent 90° for outside corner installations.

PRT2-TZ / PRT2H-TZ – is for 2" vertical pipe posts (2-3/8" outside pipe diameter). Can be field bent 90° for outside corner installations.

PRTIC2-TZ – is for inside corner installations. For 2" vertical pipe posts (2-3/8" outside pipe diameter).

Materials: See table

Finish: G-185 galvanizing

Options: See table for Corrosion Finish Options

Installation:

- Install the required fasteners according to the table.
- PRT15-TZ, PRT2H-TZ and PRTIC2-TZ - 1/4" Self Tapping Bolts are supplied with PRT models.
- Install self tapping bolts with 3/8" socket in predrilled holes.
- PRT2-TZ fastens with (1) 1/4" carriage bolt and nut (included) for tightening PRT2-TZ to pipe and (4) 1/4" HDG lag bolts for attaching tie to rail.
- Install 3 to 4 PRT's per pipe.
- PRT15-TZ, PRT2-TZ and PRT2H-TZ may be bent once to fit corner and angled conditions.
- **Bend angle only once.**

2) **NAILS:** 10d nails are 0.148" dia. x 3" long.

Typical SFP30 installation

SFP30

Typical SMP installation

SMP

BD Bolt Down

Anchors 4x4 post to wood or concrete surfaces.

Materials: 13 gauge

Finish: Paint

Patents: U.S. Patent No. 7,152,841

Installation:

- Install the required fasteners according to the table.
- **Not rated for overturning resistance. Not recommended for unrestrained posts.**

- 1) Based on code specified allowable spans for panel sheathing continuous over two or more spans with plywood strength axis perpendicular to supports.
- 2) Applicable to roof sheathing.
- 3) Applies to panels 24" or wider.
- 4) Uniform load deflection limitations 1/180 of span under live load plus dead load or 1/240 under live load only.

DC Drywall Clip

Drywall clips or "stops" help support drywall or wood paneling and reduce wood blocking on top plates, end walls, and corners.

Materials: 20 gauge

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- Use 8d nails to install DC1, 16" on-center or less.

MiTek Stock No.	Ref. No.	Steel Gauge	Fastener Schedule ¹		Code Ref.
			Qty	Type	
DC1	DS	20	1	8d	--

1) **NAILS:** 8d nails are 0.131" dia. x 2-1/2" long.

IS Insulation Supports

Insulation supports secure batt-type insulation in place between joists. Chisel-cut ends dig into joists for permanent holding. Easy to install in hard-to-reach crawl spaces.

Materials: 13 gauge carbon steel wire

Finish: None

Installation:

- Use IS16 for joist spaced 16" O.C. and IS24 for 24" O.C. spacing.
- Position insulation batt in place between joists. Hold IS unit at the center and push into place.
- Wear gloves and safety glasses during installation.

MiTek Stock No.	Ref. No.	Steel Gauge	Joist Spacing	Dimensions (in)	Code Ref.
				Overall Length	
IS16	IS16-R100	13	16" O. C.	15-1/2"	--

Connectors for homeowner / D.I.Y. Projects.

TTA12-TZ – an angle connects two 1x wood members at 90° angles.

TTA2-TZ – an angle connects two 2x wood members at 90° angles..

TTC42-TZ – a corner tie connects 2x wood members at 90° to the corner of a 4x4 post.

TTF22-TZ – a bracket connects 2x wood members to opposite sides of a 2x4 or 4x4 post.

TTR-TZ – a clip connects a 2x wood member to the face of another wood member.

TTU2-TZ – a U-clip connects 2x wood members crossing at 90°.

Materials: See table

Finish: G-185 galvanizing

Options: See table for Corrosion Finish Options

Installation:

- Install the required fasteners according to the table.
- Use all specified fasteners. See Product Notes, page 18.
- MiTek LumberLok LL915 (#9 x 1-3/8" long) wood screws are not supplied with connectors.

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

2) **NAILS:** 8d nails are 0.131" dia. x 2-1/2" long, 16d nails are 0.162" dia. x 3-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

The HFS Hardy Frame® Saddle is a 14 gauge steel channel intended to be used as a splice at locations where plumbing or other vertical penetrations destroy the structural integrity of a wall's top plates.

Materials: 14 gauge
Finish: G60 galvanizing
Codes: IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- The Saddle can be installed over the top or from the underside of the top plates, and is capable of resisting both tension and compression loads in a clearspan of up to 4-1/2".
- For wall depths greater than 3-1/2", or to install after plumbing lines have been run, the product can be separated into two "L" shapes by gripping the legs of the channel and flexing the top surface along the serration lines.

Typical HFS installation to underside of double top plates.

Separation into two "L" shapes at 6" and greater depths

Omit fasteners at first holes when the end distance is less than 1"

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Notch Width	Fastener Schedule		DF/SP Allowable Loads (Lbs.) ^{1,3}		S-P-F Allowable Loads (Lbs.) ^{1,3}		Code Ref.
			W	L		Qty ²	Type ⁴	Tension 100%	Compression 100%	Tension 100%	Compression 100%	
HFS24	--	14	3-5/8	24	≤ 4-1/2	24	16d	2950	2500	2537	2500	IBC, FL, LA
HFS36	--	14	3-5/8	36	≤ 4-1/2	32	16d	4280	2500	3681	2500	IBC, FL, LA

- 1) Allowable tension loads are for normal duration. The values may be adjusted for other durations, such as for seismic and wind loading in accordance with the NDS.
- 2) Fastener quantity is the number of 16d common nails to be installed into each of the members to be joined. When the end distance from the joint to the first nail hole is less than 1", omit the (2) nails in the 3" side-plate and the (1) nail in the 1-1/2" side-plate that are nearest the joint.
- 3) There is no reduction in double top plate capacity provided the HFS24 is installed with minimum (22) 16d common nails in each member being joined (44 total) and the HFS36 is installed with (31) 16d common nails in each member (62 total).
- 4) **NAILS:** 16d nails are 0.162" dia. x 3-1/2" long.

KRPS repair straps meet IBC, IRC, & L.A. City requirements for notched plates where placed in partitions.

Materials: See table

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Codes: See table for code references

IRC R602.6.1, IBC 2308.5.8

Installation:

- Install the required fasteners according to the table.
- Install one strap tie for each 2x plate.

Typical KRPS installation

KRPS

STS Stud Shoes

Stud shoes reinforce joists, plates, studs, or rafters which have been drilled or notched during construction.

Materials: 18 gauge

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- **STS units are not structurally rated and should not be used as a total member replacement in structural applications.**
- For use with 2" O.D. pipe.

Typical STS1 installation

STS

MiTek Stock No.	Ref. No.	Steel Gauge	Description	Dimension (in)		Fastener Schedule ^{1,2}	
				W	Qty	Type	
STS1	--	18	Single Stud	1-9/16	10	10d x 1-1/2	
STS2	--	18	Double Stud	3-1/16	12	10d	
STS3	--	18	Triple Stud	4-9/16	14	10d	

1) Maximum hole size = 2".

2) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long, 10d nails are 0.148" dia. x 3" long.

Wall bracing products are engineered to meet the prescriptive 1x4 let-in brace code requirements.

RWB – Flat bracing conveniently packaged in a handy roll out dispenser. Perfect for unexpected job site shortages. The 35-pound dispenser pack fits easily into a truck bed for transport. Pre-embossed snap-off points can be broken off by hand (wear gloves for safety).

WB – A flat style bracing engineered to easily nail to studs. No cutting or fitting needed.

WBC – L-shaped design for additional strength and rigidity.

WBT – Rolled edges and T-style design gives the WBT strength, rigidity, and eliminates sharp, sheared edges.

Materials: See table

Finish: G90 galvanizing

Codes: IBC, FL, LA,
IRC Table 602.10.4, IBC Table 2308.6.3(1)

Installation:

- Install the required fasteners according to the table.
- Bracing is a framing aid, not a substitute for structural shear wall components.
- **RWB / WB** – Use with 16" or 24" o.c. studs. Install in pairs forming an "X" or opposing "V" at each end of a maximum 25-foot long wall panel.

Steps: Square the panel. Straighten any kinks in bracing caused by handling. Lay bracing on the panel flush to the top of top plate and flush to the bottom of the bottom plate. Secure bracing to the top plate and bottom plate using 16d nails (WB) or 8d nails (RWB). Position second bracing at an angle opposite to the first brace to form an "X" and secure to top and bottom plate as with the first bracing. Using 8d nails, secure bracing to all intersecting studs.
- **WBC / WBT** – Use with 16" or 12" o.c. studs. Install one brace at each end of wall section, not exceeding 25 feet, in an opposing "V" pattern. Use the web portion of a length of bracing as a straight edge to mark studs. Cut a saw kerf 5/8" deep (1" deep for WBC). Insert the bracing web into the saw kerf, and drive one nail into the top plate. Raise the wall section into place and plumb. Finish fastening according to the nail schedule.

RWB pre-embossed snap-off points

WB126	WB126	16	1-1/4	--	11' 4-1/4"	--	8'	45°	3	16d	1	8d	

1) These products are intended to be an alternative to the nominal 1 x 4 continuous diagonal wood brace as described in the prescriptive wall bracing provisions of the applicable code.

2) **NAILS:** 8d nails are 0.131" dia. x 2-1/2" long, 16d nails are 0.162" dia. x 3-1/2" long.

O – The O series spans three joists in under/over installation. Prong teeth in the center help reduce nailing. For 1-1/2" wide dimensional lumber only.

N – The N series spans two joists per unit. Can be used for bridging or bracing. See table.

Materials: See table

Finish: G90 galvanizing

Codes: IBC, FL, LA

IRC R502.7.1, IRC R802.8.1, IBC 2308.4.6, IBC 2308.7.8

Installation:

- Install the required fasteners according to the table.
- For all models – Bridging should be installed on floor joists with a nominal depth-to-thickness ratio of 5 to 6 or more (2021 National Design Specification for Wood Construction; Section 4.4.1). Bridging units should be installed in pairs at intervals of 8' or less. Bridging pairs should form an "X" between joists; leave a slight space between the units to avoid noise-generating contact. Follow specific installation instructions below for particular models.
- Install prior to subfloor sheathing. Use (2) 8d (0.131") x 1-1/2" nails at each end. Fully seat nails to avoid any movement against the bridging and subsequent floor noise.
- Must be installed in cross pairs. Avoid bridging overlap, it may cause squeaks.

1) Grey shaded cells represent bridging installed on the face of the joist; web stiffeners required for I-Joists.

2) All bridging products require (2) 8d x 1-1/2 nails at each end, which are 0.131" dia. x 1-1/2" long.

MBG – Grip tooth bridging. Features special teeth which grip joists and provide easy single-nail installation. Can be installed after subfloor is in place.

MB16 – Snap-on, no-nail bridging can be placed in existing floor systems where joist movement is suspected. Two-piece construction creates a solid diagonal brace against joist movement.

Materials: See table

Finish: G90 galvanizing

Codes: IBC, FL, LA

IRC R502.7.1, IRC R802.8.1, IBC 2308.4.6, IBC 2308.7.8

Installation:

- Install the required fasteners according to the table.
- For all models – Bridging should be installed on floor joists with a nominal depth-to-thickness ratio of 5 to 6 or more (2021 National Design Specification for Wood Construction; Section 4.4.1). Bridging units should be installed in pairs at intervals of 8' or less. Bridging pairs should form an "X" between joists; leave a slight space between the units to avoid noise-generating contact. Follow specific installation instructions below for particular models.
- **MBG** – May be installed before or after sheathing. Position the unbent end of the bridging unit near the top of the joist and drive prongs into wood with a hammer blow to the heel of the bent end. Wedge bent end near the lower edge of the opposite joist, set teeth into wood with hammer blow. Nail holes are provided at the bent end if prongs are damaged during installation. Fully seat nails to avoid any movement against the bridging and subsequent floor noise.
- **MB16** – Two-piece unit is shipped as one piece. Bend unit in center up and down to break into two pieces. Slide narrower piece inside wider piece, setting the end tab into slot appropriate for joist spacing. Setting one prong end near the top of one joist and the opposite prong end near the bottom of the opposite joist, pull down on the center of the bridging until the wider piece snaps into place over the narrow piece and creates a rigid, one-piece bridging unit. Wear gloves during installation.

MBG

1) Joist spacing is based on a 1-1/2" joist, consult MiTek regarding wider joist applications.

2) **NAILS:** 8d x 1-1/2 nails are 0.131" dia. x 1-1/2" long.

SB Shelf Brackets

General Hardware

This shelf bracket combines shelving capabilities and closet rod support in a one-piece design.

Materials: 13 gauge

Finish: Zinc Plated

Installation:

- Install the required fasteners according to the table.

Typical SB12 installation

SB12

MiTek Stock No.	Ref. No.	Steel Gauge	Fastener Schedule ¹		Code Ref.
			Qty	Type	
SB12	SBV	13	8	10d	--

1) **NAILS:** 10d nails are 0.148" dia. x 3" long.

KSCT Corner Tie

The Corner Tie secures three-way wood-to-wood connections. Handy for building workbenches, utility tables, or shelving using 2x4 lumber.

Materials: 14 gauge

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.

Typical KSCT68 installation

KSCT68

MiTek Stock No.	Ref. No.	Steel Gauge	Fastener Schedule		Code Ref.
			Qty	Screws	
KSCT68	--	14	12	#10 panhead	--

WT Wall Tie

Materials: 22 gauge

Finish: G90 galvanizing

Options: See table for Corrosion Finish Options

Installation:

- Install the required fasteners according to the table.
- The opposite end must be bonded in the mortar joint of brick facade.
- Check local codes for spacing requirements.
- Wall tie shall be bent at nail, bonding into mortar joint.

Typical WT22 installation

WT22

MiTek Stock No.	Ref. No.	Description	Steel Gauge	Dimensions (in)		Fastener Schedule ¹		Corrosion Finish	Code Ref.

1) **NAILS:** 10d nails are 0.148" dia. x 3" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

NP Nail Plates

The NP Nail Plates are an ideal economical solution for attaching wooden members together in a non-structural connection. Also may be used as a prescriptive top plate splice per the International Residential Code (IRC). They are pre-punched for 8d common nails.

Materials: 20 gauge
Finish: G90 galvanizing
Codes: IRC R602.3.2

Installation:

- Use nails appropriate for intended use. Holes are sized for 8d common (0.131" dia. x 2-1/2" long) or 8d (0.131" dia.) x 1-1/2" nails.
- The designer shall determine appropriate load values.

SPECIALTY OPTIONS

SPECIALTY OPTIONS

318-327

Specialty Options & General Notes	320 -321
Face Mount Hanger	322
Open Top Flange Hanger	323
Solid Top Flange Hanger	324
Top Flange Nailer Options	325-326
Welded Top Flange Hanger	327
Part Number System	327

The information listed only applies to hangers manufactured by MiTek® and installed according to the instructions listed in this catalog. The designer must always evaluate each connection, including the joist and header capacities, before specifying a specialty connector. MiTek sloped hangers are manufactured with the plumb cut of the joist already calculated. If a hanger with a different height is needed, it must be specified at the time of ordering.

Materials: Steel gauge may vary from that specified depending on the specialty option and manufacturing process used. Some formed hangers may be welded when modifying the hanger. Hanger configurations, special features, fastener schedules, and height may vary from the standard part depending on the joist size, skew, and slope.

Finish: See specific hanger option tables. Welded hangers are painted with gray primer. Non-catalog hangers available in Hot-dip galvanized, use HDG after product number.

Allowable Loads: For multiple options for the same connector, use the most conservative reduction to give the lowest design load. See specific hanger option tables for applicable load reductions and maximum tolerances. Reference Specialty Options Summary Table for MiTek series catalog page references.

Installation:

- Fill all nail holes with fasteners specified in the tables.
- Fastener quantities may increase from the amount listed in the tables depending on hanger option.
- NA16D-RS and NA20D nails are supplied with hangers.
- For bevel cut skewed hangers, the end of joist must be bevel cut; for square cut skewed hangers, the end of joist must be square cut.

Codes: Modified hangers are not code evaluated due to their numerous variations.

1) Skews greater than 45° may require a square cut joist with back plate. Refer to Typical HLBH hanger skewed, left shown, square cut illustration on page 324.

Face Mount Hanger Specialty Details

Specialty Options

Refer to the Specialty Options Table for each hanger series for load reductions and hanger maximum range of skew, slope, etc.

Skewed Hanger:

- Consider SKH or SKHH hangers for 40° to 50° skews.
- Joist nails on the closed side may be relocated to the open side by MiTek designer to ensure proper nailing.
- Specify skew angle, type (square cut or bevel cut), and direction when ordering.

Typical SUH hanger skewed, right shown
(bevel cut)

Typical SUH formed hanger skewed, right shown
(square cut)

Sloped Seat Hanger:

- Consider LSSH series for sloped applications.
- Additional nail holes may be added to joist flanges by MiTek designer.
- Specify slope angle and direction when ordering.

Sloped/Skewed Hanger:

- See nailing notes above for both skewed hanger and sloped seat hanger.
- Specify skew and slope angles as well as skew/slope directions and skew type (square cut or bevel cut) when ordering.

Typical HD hanger sloped seat, down shown

Typical HD hanger sloped down, skewed left shown

Inverted Flange Hanger:

- When fastening into the carrying member's end grain, consult MiTek designer.
- Specify right or left flange when inverting only one flange.

Refer to GHF, HD, SUH, THD, THDH, THF series Special Order Worksheet for ordering instructions at MiTek-US.com.

Typical GHF hanger one flange inverted, left shown

Typical HD hanger inverted flange

Open Top Flange Hanger Specialty Details

Specialty Options

Refer to Specialty Options Table for each hanger series for load reductions and hanger maximum range of skew, slope, etc.

Skewed Hanger:

- Joist nails may be located on obtuse angle side by MiTek designer to ensure proper nailing.
- Specify skew angle, type (square cut or bevel cut), and direction when ordering.

Sloped Seat Hanger:

- Additional nail holes may be added to joist flanges by MiTek designer. All fastener holes must be filled.
- Specify slope angle, direction, and joist height when ordering.

Sloped/Skewed Hanger:

- See nailing notes above for both skewed hanger and sloped seat hanger.
- Specify skew and slope angles as well as skew/slope directions, and skew type (square cut or bevel cut) when ordering.
- Specify if hanger is to be high side flush, low side flush, or center flush.

Sloped/Skewed/Sloped Top Flange Hanger:

- See nailing notes for both skewed and sloped hangers.
- Specify skew, slope, and top flange slope angles as well as skew/slope and top flange slope directions when ordering.
- Hangers may be made with solid top plate.

Refer to BPH series Special Order Worksheet for ordering instructions at MiTek-US.com.

Typical BPH hanger skewed, left shown (bevel cut)

Typical HDO hanger skewed, right shown (square cut)

Typical BPH hanger sloped seat, down shown

Typical BPH hanger sloped down, skewed right, high side flush shown

Typical BPH hanger skewed right, sloped down, top flange sloped

Typical BPH hanger sloped down top flange right shown (this configuration will not be open back)

Solid Top Flange Hanger Specialty Details

Specialty Options

Refer to Specialty Options Table for each hanger series for load reductions and hanger maximum range of skew, slope, etc.

Skewed Hanger:

- Joist nails may be located on obtuse angle side by MiTek designer to ensure proper nailing.
- Specify skew angle, type (square cut or bevel cut), and direction when ordering.

Sloped Seat Hanger:

- Additional nail holes may be added to joist flanges by MiTek designer.
- Specify slope angle, direction, and joist height when ordering.

Sloped/Skewed Hanger:

- See nailing notes above for both skewed hanger and sloped seat hanger.
- Specify skew and slope angles as well as skew/slope directions, and skew type (square cut or bevel cut) when ordering.
- Specify if hanger is to be high side flush, low side flush, or center flush.

Sloped Top Flange Hanger:

- Additional nail holes may be added to top angle by MiTek designer.
- Specify top flange slope and direction when ordering.
- Specify if hanger is to be high side flush, low side flush, or center flush.

Ridge Hanger:

- Specify flush top of beam at center, right side, or left side.
- Specify angle of slope when ordering.

Top Flange Offset Hanger:

- Specify offset, left (L) or right (R), when ordering.

Saddle Hanger:

- Specify saddle width, "SA" when ordering. Allow clearance for saddled member.

Refer to options for HLBH, KGLS, KGLT, KHGLS, KHGLT series or HWUH, KHW, PHM, PHXU, SW, SWH series Special Order Worksheet for ordering instructions at MiTek-US.com.

Typical HLBH hanger skewed, left shown

Top Flange Hanger Nailer Options

Specialty Options

MiTek Top Mount Hangers have been tested installed to various nailers. Wood nailers may be installed to the top of steel beams, concrete and masonry walls. The table below represents maximum allowable loads for common top mount hangers installed on 2x, 2-ply 2x, 3x and 4x nailers.

For additional Nailer Installation information see page 199.

Avoid direct contact between hangers and steel beams which may cause squeaks

MiTek Series	Nailer Size	Fastener Schedule ^{5,6}				DF/SP		SPF/HF

Correct Attachment

Improper Installation

Too Narrow

Top flange not fully supported can cause nail breakout. Or, by fully supporting top flange, hanger is tilted back, causing lifting of carried member which results in uneven surfaces and squeaky floors.

Too Wide

Loading can cause cross grain breaking of nailer. The recommended nailer overhang is 1/4" maximum per side.

Too Thin

Top flange nailing cannot fully penetrate nailer, causing reduced allowable loads. Never use hangers which require multiple face nails since the allowable loads are dependent on all nail holes being used.

1) Allowable loads are valid for hanger height ≤ 20". For hanger height ≥ 20", consult MiTek Engineering.
 2) Uplift loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.
 3) FWH hangers with a width of 1-9/16" are limited to 2,665 lbs of download in DF and 1,955 in S-P-F.
 4) Values in the table apply to standard top mount hangers without slope, skew or any other specialty options.
 5) **MiTek SCREWS:** WS15 structural wood screws are 1/4" dia. x 1-1/2" long and are not included with KGLT hangers. WS3 structural wood screws are 1/4" dia. x 3" long and are included with KGLT hangers.
 6) **NAILS:** 10d x 1-1/2 nails are 0.148" x 1-1/2" long, 10d nails are 0.148" dia x 3" long, NA16D-RS nails are 0.148" x 3-1/2" long, 16d x 2-1/2" nails are 0.162" dia. x 2-1/2" long, 16d nails are 0.162" dia. x 3-1/2" long.

Welded Top Flange

Specialty Options

- Weld sizes and lengths shown on table.
- Weld-on applications produce maximum allowable load listed. **Uplift loads do not apply to this application.**
- All welding should be done in accordance with the American Welding Society (AWS) Standard by a certified welder.
Caution: Welding galvanized steel may produce harmful fumes and should only be performed in well-ventilated environments.

Typical top flange welded installation

Typical top angle welded installation

Top Angle Weld Length Table

MiTek Welded Hanger Series	Minimum Weld Length
SW	3"
FWHL	3-1/2"
BPH, FWH, HBPH, PHM, SWH	4"
FWHBP, FWHFM, FWHH, KLB, KHW, PHXU	6"
KB, KGB, KHGB, KHHB, KGLS, KGLST, KGLT, KHGLS, KHGLT	8"
HLBH, KHGLT	10"

Top Angle Steel Gauge	Weld Size
14 - 10 gauge	1/8"
7 gauge	3/16"
3 gauge	1/4"

Weld shall be distributed evenly.

Typical saddle hanger installation

Part Number System

Part Numbers assigned to TFL, THO, IHFL, IHF, THFI and THF I-Joist hangers reveal the I-Joist sizes to be used with the specific hanger. This guide will teach you how to recognize I-Joist dimensions in the part numbers.

1st, 3rd, and sometimes 4th digits are whole numbers (This example denotes 2 and 11)
4th digit may be part of a decimal –

2nd and 5th digits are decimals (see guide below)
(This example denotes .3125 [5/16] and .875 [7/8])
5th digit may be (0) or dropped if height is even

Part Number Guide for Decimals

1 = .125	or	1/8 inch
2 or 25 = .25	or	1/4 inch
3 = .3125	or	5/16 inch
5 = .5	or	1/2 inch
6 = .625	or	5/8 inch
7 = .75	or	3/4 inch
8 = .875	or	7/8 inch

PHM	35	925	-2
PHM	35	925	-2
Letters refer to Hanger Series ex.: THO	First (2) Digits refer to Member Width ex.: 3.5 inches	Last (2) or (3) Digits refer to Member Height ex.: 9.25 inches	Digits after Dash refer to Number of Plies ex.: 2-ply

Some Examples:

THO15950 1-1/2" x 9-1/2"
IHFL17925..... 1-3/4" x 9-1/4"
IHF16925-2..... double 1-5/8" x 9-1/4"
IHF23925-2..... double 2-5/16" x 9-1/4"

Note: MiTek's Product Catalog lists a range of heights for IHFL/IHF hangers. Face mount hangers can usually accommodate more than one I-Joist height. The hanger height must be tall enough to support the top chord of the I-Joist to eliminate web stiffener requirements for lateral stability. The IHFL/IHF hanger must be a minimum of 60% of the joist height.

Fastening Information

Cold-Formed Steel Connectors

MiTek recommends the use of hex head metal screws with a self-drilling tip, for ease of installation and strength. Screw diameter ranges from 0.190" to 0.250" and is specified for each connector in their corresponding load table.

An important factor to consider when selecting a self-drilling screw is the material thickness specifically the combined side and main member thickness. Care should be taken by the designer to verify that the drill point and thread length are long enough to appropriately fasten the members per the fasteners manufacturers specifications.

The drill point is the unthreaded section from the screw tip to the first thread. This length must be long enough to completely drill through the material before the threads engage. If the threads engage too early, they can cause the fastener to bind and break.

Specification Table

Screw Size	Nominal Diameter (in)	Washer Diameter (in)	Allowable Screw Shear Strength (P_{ss}/Ω)	Allowable Shear Connection Strength ($P_{ns}/\Omega, P_{ss}/\Omega$)					Allowable Screw Tension Strength (P_{ts}/Ω)	Allowable Tensile Pull-Out Strength ($P_{not}/\Omega, P_{ts}/\Omega$)				
				Steel Thickness mil (gauge)						Steel Thickness mil (gauge)				
				33–33 (20–20)	43–43 (18–18)	54–54 (16–16)	68–68 (14–14)	97–97 (12–12)		33 (20)	43 (18)	54 (16)	68 (14)	97 (12)
#10 x 1/2"	0.190	0.375	548	177	263	370	523	548	386	84	109	137	173	246
#12 x 3/4"	0.216	0.375	775	188	280	394	557	775	777	95	124	156	196	280
#14 x 3/4"	0.250	0.500	1016	203	302	424	600	1016	1067	110	144	180	227	324

- 1) Allowable loads are per AISI S-100 and are for use when utilizing the traditional Allowable Stress Design methodology. The tabulated loads may be multiplied by a Factor of Safety (Ω) of 3 to determine the screw nominal strength. The LRFD load may be determined by multiplying the allowable screw load by the ASD safety factor of 3 then by Resistance Factor (ϕ) of 0.50.
- 2) Allowable loads may not be increased for wind or seismic load unless otherwise noted.
- 3) Allowable loads are based on cold-formed steel members with a minimum yield strength, F_y , of 33 ksi and tensile strength, with an F_u , of 45 ksi.
- 4) Allowable loads are based on design steel thickness for 33 mil = 0.036", 43 mil = 0.048", 54 mil = 0.060", 68 mil = 0.075", and 97 mil = 0.105" with the #10, #12 and #14 screws having of minimum nominal shear strength of 1650 lbs, 2325 lbs and 3050 lbs respectively.
- 5) Self-drilling tapping screw fasteners for steel-to-steel connections used for connectors in this catalog shall be in compliance with ASTM C1513.
- 6) Screw diameters used in the calculation of shear loads per ANSI/ASME standard.

The S/PHD holdowns are used for providing a tension connection between CFS framing members and the foundation or other structural members. The pre-deflected design keeps deflection low. The S/PHD holdowns attach with #14 self-drilling screws making installation an ease, saving time and labor.

Materials: S/PHD4, S/PHD6 – 14 gauge; S/PHD9 – 12 gauge
Finish: G90 galvanizing
Codes: IBC, LA

Installation:

- Install the required fasteners according to the table.
- Place the S/PHD over the anchor bolt. No washer is required.
- Install with standard #14 self-drilling (tapping) screws to fasten to CFS framing members.
- Tighten anchor bolt nuts finger tight to base plus 1/3 to 1/2 additional turns with a wrench.
- S/PHD Holdowns installed elevated more than 4" off the base track may have higher deflection values.
- The design engineer may specify any alternate anchorage calculated to resist the tension load for a specific application. Anchor rod exposure length should take the bearing plate height of 1-5/8" into account, anchor bolt thread should visibly extend above nut.
- The 2-ply built up studs shall be designed to act as a single unit. Holddown specified shall not be considered to attach multiple CFS members together.
- For anchorage options see MiTek's STB/ STBL Anchor Bolt series or ATR threaded rod series products epoxied into place at required depth.

Typical S/PHD installation

1) The designer must specify the anchor bolt type, length and embedment.
 2) Deflections are derived from static, monotonic load tests and are a measurement of the displacement between the anchor bolt and a point on the cold-formed steel studs just above the holdown location. This displacement at the tabulated load includes fastener slip, holdown elongation and elongation of an anchor bolt 4" in length. For every additional 1" in anchor bolt length, the deflection will increase 0.00010" (S/PHD4, S/PHD6) and 0.00006" (S/PHD9) for every 1,000 lbs. of applied load.
 3) #14 screws are self-drilling 0.250" diameter hardened washer-head screws with a minimum nominal shear strength of 3,050 lbs. and to be installed in accordance with manufacturer's specifications.
 4) The designer must specify the metal stud size and mil thickness.

The LTS20B and the HTT14S tension ties are designed for both new construction and retrofit applications for concrete-to-steel connections and do not require an additional washer.

LTS20B is a light capacity tension tie strap with a 1/4" load transfer plate.

Materials: See table

Finish: Strap – G90 galvanizing; Plate – Primer

Installation:

- Install the required fasteners according to the table.
- Attach the strap portion of the connector to the steel stud. Secure the base to the foundation or wall with specified anchor bolt.
- A design professional shall specify the type, length, and embedment of the anchor bolt. No washers are required.

Typical HTT14S installation

LTS20B

HTT14S

MiTek Stock No.	Ref. No.	Steel Thickness		Fastener Schedule				Allowable Tension Loads (Lbs.) ^{1,2,4}						Code Ref.
		Strap Gauge	Plate (in)	To Sill Plate		To Stud		2-33 mil (2-20ga) Back-to-Back Studs		2-43 mil (2-18ga) Back-to-Back Studs		2-54 mil (2-16ga) Back-to-Back Studs		
				Qty	Dia. (in)	Qty	Type	100%	160%	100%	160%	100%	160%	
LTS20B	S/LTT20	12	1/4	1	3/4	5	#10	885	1140	1090	1090	1210	1210	--
HTT14S	S/HTT14	10	--	1	5/8	14	#10	2480	3290	3680	4425	4825	4825	--

- 1) Back-to-back stud members are required unless otherwise noted.
- 2) Allowable loads at 160% can only be used with codes that permit the use of alternate basic load combinations and when the referenced materials standard permits it.
- 3) Designer shall specify anchor embedment and configuration.
- 4) Designer shall verify the adequacy of the steel studs to transfer the required load.
- 5) #10 screws are self-drilling 0.190" diameter hardened washer-head screws with a minimum nominal shear strength of 1,650 lbs. and to be installed in accordance with manufacturer's specifications.

The **TD8S**, **TD10S**, and **TD15S** are high capacity holdowns which are designed for attachment to cold formed steel (CFS) framing members.

Materials: See table
Finish: Primer

Installation:

- Install the required fasteners according to the table.
- Use #10 self-tapping screws to attach the back or strap portion of the holddown to a steel stud. Install nut to secure the base of holddown to foundation with anchor bolt of specified diameter.
- A design professional shall specify the type, length, and embedment depth of the anchor bolt.
- Install anchor bolt nut to base of holddown until finger tight, then tighten an additional 1/3 to 1/2 turns with a wrench.

TD10S

Typical TD10S installation

MP/S angles are field-adjustable to attach members intersecting at angles. MP/S angles are load rated and provide an alternate to the field fabricated clip angles.

Materials: 18 gauge

Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.
- Field-adjustable from 45°-180° (flat). Bend angle only once.
- Joist must be constrained from rotation.

Typical MP/S7 installation
(MP/S5 similar)

Typical MP/S7 skew installation
(MP/S5 similar)

- 1) Allowable load is tension capacity of the strap based on the total quantity of screws installed in the strap to develop full tension strength.
- 2) Allowable loads are based on Grade 33 steel for 43 mil (18 ga) and thinner CFS members and Grade 50 steel for 54 mil (16 ga) and thicker CFS members.
- 3) Install half the total quantity of fasteners on each end of the strap to achieve full tension load of strap.
- 4) Minimum quantity of fasteners to be installed with equal fasteners at each end of the connection. Product may have additional holes not needed to meet the published allowable load of the strap.
- 5) #10 screws are self-drilling 0.190" diameter hardened washer-head screws with a minimum nominal shear strength of 1,650 lbs. and to be installed in accordance with manufacturer's specifications.

HDO/S / HDOL/S Top Mount Hangers

Cold-Formed Steel Connectors

HDOL/S (14 ga) and HDO/S (12 ga) top mount hangers are available in a wide variety of stock sizes to match the most common framing needs with economical solutions where custom or special order hangers were required before. The revolutionary design utilizes shear lag slots designed to maximize the capacity of the hangers while providing a safe and ductile connection.

The HDOL/S and HDO/S hangers may be installed with screws, powder actuated, or welded to the header.

Materials: HDOL/S 68mil (14 gauge), HDO/S 97mil (12 gauge)

Finish: G90 galvanizing

Patents: U.S. Patent No. 10,662,641, U.S. Patent No. 10,072,412

Installation:

- Install the required fasteners according to the table.
- Install prescribed type and number of self-drilling screws in to the round holes of the hangers. Do not install screws in the shear lag slots.
- Powder actuated fasteners are permitted.
- Welding of the hangers is permitted. Place a minimum 1/8" x 2" fillet weld on each top flange of the hanger. Welding should be performed by a qualified welder using a qualified welding procedure while distributing the weld evenly across both flanges. Weld-on applications produce maximum allowable load listed.

1) Testing of HDOL/S and HDO/S hangers was performed with framing members with minimum steel yield strengths of Fy=50 ksi.
 2) Qualified designer shall design connection to ensure the header is designed to carry the load and the joist member is sufficient to transfer load to hanger.
 3) Allowable loads based on testing with 68 mil (14ga) CFS members for the HDOL/S hanger and 97 mil (12ga) CFS members for the HDO/S hanger.
 4) #10 screws are self-drilling 0.190" diameter hardened washer-head screws with a minimum nominal shear strength of 1,650 lbs. and to be installed in accordance with manufacturer's specifications.

The FWH/S Fire Wall Hanger attaches to cold-formed steel wall framing to support cold-formed steel joists.

- Materials:** 14 gauge
Finish: G90 galvanizing
Options: See Specialty Options table

Installation:

- Install the required fasteners according to the table.
- Install prescribed type and number of self-drilling screws through the round holes into the wall track. Install (5) self-drilling screws through the hanger into one side of the joist using the round and slotted holes.
- Powder actuated fasteners are permitted.
- Welding of the hangers is permitted. Place a minimum 1/8" x 2" fillet weld on each top flange of the hanger. Welding should be performed by a qualified welder using a qualified welding procedure while distributing the weld evenly across both flanges. Weld-on applications produce maximum allowable load listed. **Uplift loads do not apply to this application.**

- 1) #10 screws are self-drilling 0.190" diameter hardened washer-head screws with a minimum nominal shear strength of 1,650 lbs. and to be installed in accordance with manufacturer's specifications.
- 2) Larger self-drilling/tapping screws may be used with no reduction in load carrying capacity.
- 3) Tested with 400T125-68 bearing stiffener. Thicker gauge bearing stiffeners may also be used.

Specialty Options Table – Refer to Specialty Options pages 320 and 323 for additional details.

Option	Skewed ¹	Top Flange Offset
Range	1° to 70°	--
Allowable Loads	70% of table load	70% of table download. 180 lbs. Max uplift
Ordering	Add <i>SK</i> , angle required, right (<i>R</i>) or left (<i>L</i>), and square cut (<i>SQ</i>) to product number. Ex. FWH/S2010_SK45R_SQ	Add <i>OS</i> , and right (<i>R</i>) or left (<i>L</i>), to product number. Ex. FWH/S2010_OSL

1) Skewed hangers with skews greater than 15° may have all joist fastening on outside flange.

LUGT Girder Tiedown

The LUGT is designed to transfer uplift loads from roof framing members to the wall studs.

Materials: 20 gauge
Finish: G90 galvanizing

Installation:

- Install the required fasteners according to the table.

MiTek Stock No.	Ref. No.	Steel Gauge	Fastener Schedule						Type ^{1,4,5}	Allowable Tension Loads (Lbs.) ²			Code Ref.
			Min Qty ^{1,3}			Joist Qty ⁶				33 mil (20ga)	43 mil (18ga)	54 mil (16ga)	
			33 mil (20ga)	43 mil (18ga)	54 mil (16ga)	33 mil (20ga)	43 mil (18ga)	54 mil (16ga)					
LUGT1	H10S	18	6	4	4	6	4	4	#10	1045			--

- 1) Install self-tapping screws symmetrically into CFS stud to prevent any eccentricity.
- 2) Allowable load is based on allowable tension capacity of truss to connector. Be sure to install all prescribed nails.
- 3) Minimum quantity of fasteners to be installed. Product may have additional holes not needed to meet the published allowable load.
- 4) #10 screws are self-drilling 0.190" diameter hardened washer-head screws with a minimum nominal shear strength of 1,650 lbs. and to be installed in accordance with manufacturer's specifications.
- 5) Allowable loads are based on Grade 33 steel for 43 mil (18 ga) and thinner CFS members and Grade 50 steel for 54 mil (16 ga) and thicker CFS members.
- 6) Joist fasteners must be distributed evenly.

Copyright © 2024 MiTek, Inc. All Rights Reserved.

SPT Stud Plate Ties

Cold-Formed Steel Connectors

MiTek SPT4 and SPT6 Stud Plate Ties may be used to create a tension and bearing connection between multiple CFS members with self-tapping screws.

Materials: 20 gauge
Finish: G90 galvanizing

- Installation:**
- Install the required fasteners according to the table.
 - Wrap SPT tie around top or bottom track.

MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)		Fastener Schedule		Allowable Uplift Loads 100% (Lbs.) ¹			Code Ref.
			W	H	Qty	Type ²	33 mil (20 ga)	43 mil (18 ga)	54 mil (16 ga)	
SPT4	SP4	20	3-9/16	6-7/8	6	#10	530	830	985	--
SPT6	SP6	20	5-9/16	7-5/8	6	#10	530	830	985	--

- 1) Allowable loads are based on Grade 33 steel for 43 mil (18 ga) or thinner CFS members and Grade 50 steel for 54 mil (16 ga) or thicker CFS members.
- 2) #10 screws are self-drilling 0.190" diameter hardened washer-head screws with a minimum nominal shear strength of 1,650 lbs. and to be installed in accordance with manufacturer's specifications.

RT/S Hurricane Ties

RT/S are designed to tie trusses and rafter to wall systems. RT/S are to resist uplift and lateral forces between framing members.

Materials: 18 gauge
Finish: G90 galvanizing

- Installation:**
- Install the required fasteners according to the table.
 - Designer shall determine if solid blocking is required.

MiTek Stock No.	Ref. No.	Steel Gauge	Fastener Schedule				Allowable Loads (Lbs.) ^{1,2}				Code Ref.
			Truss/Rafter ³		Stud/Track ³		33 mil (20 ga)				
			Qty	Type ⁴	Qty	Type ⁴	Uplift	F1	F2	F4	
RT/S3A	S/H3	18	2	#10	2	#10	355 ²	230	185	85	--
RT/S7A	S/H2.5	18	4	#10	4	#10	465	145	160	115	--
RT/S10	S/H2	18	3	#10	3	#10	455	--	--	--	--

- 1) Allowable loads are for one part only.
- 2) Allowable uplift loads for the RT/S3A may be increased up to 375 lbs. when GR50 members are used.
- 3) 33 mil members have been evaluated as Grade 33.
- 4) #10 screws are self-drilling 0.190" diameter hardened washer-head screws with a minimum nominal shear strength of 1,650 lbs. and to be installed in accordance with manufacturer's specifications.

Installation Notes	342
Foundation Anchor	343
Hangers	344
Rafter Ties	345-346
Stud Plate Ties	346
Plate Tie	347
Post Anchors	348
Nail Plates	348
Protection Plates	349

Catalog installation notes should be followed when installing pneumatic nail connectors using alternative nails. All fasteners should be installed into nailing zones and maintain minimum 1" center-to-center spacing. Alternative nail quantity required for installation of pneumatic nail hangers can be determined using the table below.

Alternative Nails for Installation of Pneumatic Nail Connectors

Fastener Description	Dimensions (in)		DF/SP Allowable Shear per Nail (Lbs.) ^{1,2,3,4,5,6}		S-P-F Allowable Shear per Nail (Lbs.) ^{1,2,3,4,5,6}	
	Diameter	Length	Steel Gauge		Steel Gauge	
			18	20	18	20
0.099 x 1-1/2"	0.099	1-1/2	58	56	50	48
0.100 x 1-3/8"	0.100	1-3/8	60	57	51	49
0.105 x 1-1/2"	0.105	1-1/2	65	63	56	54
0.113 x 2-3/8"	0.113	2-3/8	75	72	64	62
0.131 x 1-1/2"	0.131	1-1/2	98	96	85	83
0.131 x 3"		3				
0.148 x 1-1/2"	0.148	1-1/2	118	116	102	100

- 1) Nail allowable load values were calculated as specified by the 2018 NDS; Sections 11 & 12, and Appendix I and L.
- 2) The nail lateral loads are adjusted by the Penetration depth factors, C_p, based on the length of the nails and thickness of the steel side members. However, this assumes sufficient wood thickness to receive the full length of the nail or at least ten times the diameter of the nail, whichever is less.
- 3) Adjustment factors for duration of load, service conditions and installation shall be applied to the nail values in accordance with the provisions of the NDS delineated in Sections 2, 11 and 12.
- 4) The allowable load for any connector shall not exceed the catalog value.
- 5) Fastener bending yield strength based on ASTM F1667-18 Table S1.1.
- 6) Quantity of fasteners must be used symmetrically in header flanges and into each side of joist.

Example:

JN28E (20 gauge) using .105 x 1-1/2" fasteners Header material: S-P-F
 JN28E down load at 115% = 1055 lbs. Joist material: S-P-F
 JN28E uplift load at 160% = 245 lbs.

Nail Quantity Required for Down Load:

Allowable shear capacity at 100% load duration = 54 lbs.

$$54 \left(\frac{\text{lbs}}{\text{nail}} \right) \times 1.15 = 62.1 \left(\frac{\text{lbs}}{\text{nail}} \right)$$

$$\frac{1055 \text{ lbs}}{62.1 \left(\frac{\text{lbs}}{\text{nail}} \right)} = 17 \text{ nails}$$

Use equal amount of fasteners in each side so use 9 nails in each flange for a total of 18.

Nail Quantity Required for Uplift:

$$54 \left(\frac{\text{lbs}}{\text{nail}} \right) \times 1.60 = 86.4 \left(\frac{\text{lbs}}{\text{nail}} \right)$$

$$\frac{245 \text{ lbs}}{86.4 \left(\frac{\text{lbs}}{\text{nail}} \right)} = 3 \text{ nails}$$

Use equal amount of fasteners per side of joist so use 2 in each side for a total of 4.
 Also make sure there are as many or more fasteners in the hanger to header connection.
 18 nails in header ≥ 4 nails in joist.

For installation into concrete slabs and stemwalls. The FA3 features a split flange for nailing to both mudsill and stud for greater framing versatility.

- Materials:** 16 gauge
- Finish:** G90 galvanizing
- Options:** See table for Corrosion Finish Options
- Codes:** IBC, FL, LA

Installation:

- Install the required fasteners according to the table.
- Use a minimum of two anchors per mudsill. An anchor should always be within 12" of the end of each mudsill section.
- Do not rely on these anchors to secure concrete sections together between cold joints.
- Insert into wet concrete (minimum strength of 2,500 psi). Place mudsill after concrete cures. Secure flanges to sill (and stud, if applicable), bending flanges as needed to achieve a tight fit. Fasten as directed in table.
- For installation in severe corrosion environments, see Corrosion Information on pages 12-18.

- 1) Predrilled holes are not required.
- 2) Allowable Stress Design (ASD) values have been adjusted for a load duration factor, CD, of 1.6 corresponding to a ten-minute load duration (i.e. wind or earthquake loading) in accordance with the NDS. The ASD loads do not apply to loads of other durations.
- 3) Allowable loads are based on a minimum stemwall thickness of 6", minimum distance from the end of the concrete wall of 4" and minimum anchor spacing of 8".
- 4) Uplift deformation based on wood connection strength.
- 5) Minimum concrete strength f'c = 2,500 psi.
- 6) **NAILS:** 10d x 1-1/2 nails are 0.148" dia. x 1-1/2" long.

Corrosion Finish Key ■ Stainless Steel ■ Gold Coat ■ HDG ■ Triple Zinc

MiTek's "no hole" connectors are engineered for wood frame structures built in a factory environment. These connectors feature embossed "nailing zones" for faster and safer fastener installation.

Materials: 18 or 20 gauge
Finish: G90 galvanizing
Codes: See table for code references

Installation:

- Install all specified fasteners using a pneumatic nailer.
- Nailing zones are distinguished by embossed pattern.
- Install fasteners with care not to overdrive fastener causing indentation of connector.
- Fastener quantities shall be installed symmetrically on both sides of connector.
- Installer should reduce risk of injury from rebounding fasteners by using personal eye protection during fastener installation.

								16	4	"P" nails	960	1105	1200	305	845	975	995	245	

1) "P" nails denotes fasteners designed specifically to be installed with a pneumatic-powered nailer. The fasteners shall be either of a type with round heads, 0.105" diameter and 1-3/8" long; or a "T" shaped head, 0.097" diameter, 1-1/4" long and hardened; or a similar but larger fastener.
 2) Fasteners shall be pneumatically driven in such a way as firmly seats the nail head against the hanger steel, without embedding the nail head completely through the plane of the metal surface, or otherwise punching through.
 3) The quantity of nails installed shall be equally distributed to both sides of the hanger. The nails shall be located at 1" spacing in a row, with the vertical rows spaced at 3/8"; also no less than 5/16" from a sheared edge and no less than 5/16" from a formed edge.
 4) Uplift loads have been increased 60% for wind or seismic load conditions; no further increase shall be permitted.

RST3 Rafter Tie

Manufactured Housing Connectors

The RST3 rafter tie is designed to anchor trusses and rafters directly to the stud below. The ability to field-bend the RST3 permits fastening to either the wide or narrow face of the stud.

Materials: 18 gauge
Finish: G90 galvanizing

Installation:

- Use all specified fasteners.
- If necessary, field bend the lower tab of the RST3 at 90° at the two bend slots.
- Not all fastener holes need to be filled.
- Fasteners in truss do not need to penetrate a nailing plate to achieve the uplift loads listed below.
- The RST3 can be installed in pairs (on opposite sides of the wall, to achieve twice the uplift capacity).

1) Allowable loads have been increased 60% for wind or seismic loads; no further increase shall be permitted.

2) #8 x 1-1/2 wood screw has a diameter of 0.164" and a length of 1-1/2".

MRT7 Rafter Tie

Manufactured Housing Connectors

MH Connectors

The MRT7 Rafter Tie is engineered for wood frame structures built in a factory environment. These connectors feature embossed “nailing zones” for faster and safer fastener installation.

Materials: 18 gauge
Finish: G90 galvanizing

Installation:

- Install all specified fasteners using a pneumatic nailer.
- Nailing zones are distinguished by embossed pattern.
- Install fasteners with care not to overdrive fastener causing indentation of connector.
- Fastener quantities shall be installed symmetrically on both sides of connector.
- Installer should reduce risk of injury from rebounding fasteners by using personal eye protection during fastener installation.

Typical MRT7 installation

Typical knee wall set with MRT7 installation

- 4) Uplift loads have been increased 60% for wind or seismic load conditions; no further increase shall be permitted.

SPTHW Stud Plate Ties

MiTek's SPTHW is a Stud Plate Tie that can be installed on the top and bottom of each stud at the manufacturing facility to stiffen for shipping and handling. Designed to be installed over 1/2" structural sheathing. Sheathing should be independently fastened to framing.

Materials: 18 gauge
Finish: G90 galvanizing
Codes: IBC, FL, LA

Installation:

- Install all specified fasteners.

D Post Anchors

Manufactured Housing Connectors

Porch design for any structure must account for the wind exposure. Porches present lots of sail area to catch the wind and can develop very high wind uplift in ordinary wind events. They must be securely tied to the foundation. MiTek engineers and manufactures products intended to provide a load path from the porch components to the foundation.

Materials: 18 gauge
Finish: G-185 galvanizing
Options: See table for Corrosion Finish Options
Codes: IBC, FL, LA

Installation:

- Use all specified fasteners.
- **Not recommended for fence posts or other unrestrained (not fixed or fastened at top) applications. These anchors are not designed to resist overturning (moment) loads.**
- D44-TZ offers lateral and uplift resistance: they are not recommended as a primary means of anchorage for posts in railings.

Typical D44-TZ installation

D44-TZ

Post Size	MiTek Stock No.	Ref. No.	Steel Gauge	Dimensions (in)			Fastener Schedule ²				DF/SP Allowable Loads (Lbs.) ¹			S-P-F Allowable Loads (Lbs.) ¹			Corrosion Finish	Code Ref.

NP Nail Plates

The NP Nail Plates are an ideal economical solution for attaching wooden members together in a non-structural connection. Also may be used as a prescriptive top plate splice per the International Residential Code (IRC). They are pre-punched for 8d common nails.

Materials: 20 gauge
Finish: G90 galvanizing
Codes: IRC R602.3.2

Installation:

- Use nails appropriate for intended use. Holes are sized for 8d common (0.131" dia. x 2-1/2" long) or 8d (0.131" dia.) x 1-1/2" nails.
- The designer shall determine appropriate load values.

NP

Plumbing / Electrical Protection Plates

Manufactured Housing Connectors

MH Connectors

Easy-to-install plates protect plumbing and power/communication wiring from nail or screw penetration.

ICPL58 – Installs with nails

KNS1 / PL4 – Prongs allow for quick installation

Materials: 16 gauge

Finish: ICPL516-TZ – G-185 galvanizing; All other – G90 galvanizing.

Options: See table for Corrosion Finish Options

Installation:

- Use all specified fasteners.
- 16 gauge steel conforms to protection shield plate requirements of the National Electrical Code and International Plumbing Code.

LATERAL SYSTEMS

LATERAL SYSTEMS

350-354

Hardy Frame® Shear Walls	352
Hardy Frame® CFS Moment Frames	353
Hardy Frame® Moment Frames	353
Z4 Tie-Down Systems	354

Hardy Frame® Code Evaluation

Hardy Frames has been leading the pre-manufactured shear wall industry from its beginning. Hardy Frames were the first to be recognized by ICBO-ES and LA City, first to gain approval for multi-story applications, first Balloon Wall application that is fully assembled in the manufacturing plant and ships as a one piece unit and first to be recognized to comply with the 2003 and 2006 IBC and IRC Building Codes. Today we are the first and only to offer a 9" Panel width.

All Hardy Frame® Shear Walls are code listed under the 2021 IBC and IRC, 2022 CBC and CRC, 2023 LABC and LARC, and 2023 FBC codes and include installations on concrete, raised floor and upper floor systems.

Hardy Frame® Panels

ICC-Evaluation Service ESR-2089

- Panels are available in 9, 12, 15, 18, 21 and 24" widths
- Standard Heights range from 78" for portal applications to 20' for Balloon Walls
- Custom heights are manufactured routinely
- R Value for design = 6.5, Cd = 4.0
- "Back to Back" installations provide two times the allowable shear value without increasing the wall length

Hardy Frame® Brace Frame

ICC-Evaluation Service ESR-2089

- Available in 32 and 44" widths
- Standard Heights range from nominal 8 to 13 feet
- Custom heights are manufactured routinely
- R Value for design = 6.5, Cd = 4.0
- For a given shear load, installing a wider shear wall results in reduced overturning

Copyright © 2024 MiTek, Inc. All Rights Reserved.

The First and Only Cold Formed Steel (CFS) Moment Frames

The MiTek Hardy Frame® CFS Moment Frame and CFS Picture Frame are the industry's first standardized, pre-engineered, pre-manufactured cold formed steel moment frames.

Lighter and less cost than structural steel moment frames, our CFS product line provides high capacities, ductility and cost economics that complete a spectrum of MiTek shear wall solutions.

Standard configurations are the Hardy Frame® CFS Moment Frame (portal applications) and the Hardy Frame® CFS Picture Frame for stacking in multi-story applications.

Hardy Frame® CFS Moment Frame

Code Report: ER-491

- Similar materials and installation as Hardy Frame Panels the industry leader for 20 years
- Available in standard designs and standard detailing
- Capacities that are equal to four or five Hardy Frame Panels of same width
- Can be installed "Back to Back" to double the capacity

Hardy Frame® CFS Picture Frame

- Sill beam that assembles at the bottom of the Frame distributes compression over wood below to significantly reduce crushing and maintain shear capacity
- Incorporates the MiTek Z4 Continuous Tie-Down System to transfer overturning and uplift forces to the foundation
- Narrow columns (12 through 21") and shallow beam depths (12 and 15") enable large openings and architectural freedom
- Ships as a "knock-down" unit: easy to handle, ship and field assemble
- Custom designs available, see CFS Moment Frame Design Manager at <http://builderproducts.mii.com/cfsmomentframe>

Lateral Systems

Hardy Frame® Moment Frames

MiTek Hardy Frame® Special Moment Frames are constructed of wide flange columns connected to hollow structural steel (HSS) beams with SidePlate special moment connections.

The SidePlate special moment connection is approved in the AISC 358 Prequalified Moment Connections Standard and the review included testing that confirmed lateral bracing to prevent twist and out-of-plane displacements is not required at the hollow structural section (HSS) beams. Standard configurations are the Hardy Frame® Moment Frame with a pinned base and the Hardy Frame® Picture Frame.

Hardy Frame® Moment Frame

- Standard designs for nominal 6" through 14" column depths with pinned base anchorage are now available
- Delivery options for pre-assembled, bolted column splice or "knock-down"
- All standard designs fit in typical 8" wall framing
- New construction and retrofit applications
- Includes wood nailers at top & bottom of HSS beam and at all column flanges

Hardy Frame® Picture Frame

- Constructed with HSS beams at top and bottom of Frame, SidePlate special moment connections at all four corners
- HSS beam at bottom of Frame eliminates the engineering and field construction of costly grade beams
- Significant reductions in installation time result from elimination of field built grade beam
- Standard designs for nominal 6" through 14" column depths that fit into typical 8" wall framing with double the capacity of our pinned base option are now available
- All the same delivery options and wood nailer inclusions as the Hardy Frame® Moment Frame with pinned base
- Custom designs available, see HFSMF Special Moment Frame Design Manager at <http://builderproducts.mii.com/specialmomentframe>

MiTek® Z4 Tie-Down Systems utilize CNX/CNXO-Series Cinch Nuts to compensate for wood shrinkage and building settlement that cause connections to loosen over time. The Cinch Nut uses a self-ratcheting action that permits the cinch nut to move or “travel” perpetually in one direction only down the rod (the rod doesn’t move). Available for installation with threaded rods that are 3/8” through 1-1/2” diameter in 1/8” increments, the CNX/CNXO Cinch Nut has been code evaluated and published in ESR-2190.

- Place the specified Bearing Plate Washer onto the bottom plate of a wood framed wall.
- With the “wings” oriented downward, place Cinch Nut over the ATR extending from below and push down until it seats firmly on the Bearing Plate Washer.
- Install 1/4” diameter MiTek® WS Screws through the wings, penetrating 1” (minimum) into the wood bottom plate.
- Model numbers BPW5 and BPW6 fit in-between the screws fastening the wings.
- Model numbers BPW7 (3-1/4” x 4-3/8”) and larger are provided with two screw holes. Align the wing and the Bearing Plate Washer screw holes to allow installation of 1/4” diameter MiTek® WS Screws.

MiTek® Z4 Tie-Down System for Lateral Load

To resist tension loads due to overturning moments in multi-story buildings the Cinch Nut is installed over a Bearing Plate Washer at each level in a fast and easy application. At the uppermost level a Cinch Nut is installed over a Bearing Plate Washer above the top plates. At walls below that bear on wood floor systems, the Cinch Nut and Bearing Plate Washer are installed over the bottom plate. Tension loads are gathered at each level and transferred into the foundation through a continuous system of Cinch Nuts, Bearing Plate Washers, ATRs and Couplers. All are available lines by MiTek.

MiTek® Z4 Tie-Down System for Wind Uplift

For resisting roof uplift loads resulting from wind the Z4 Cinch Nut is installed over a Bearing Plate Washer above the top plates with roof framing above to create a tie-down system. Uplift forces are transferred into a continuous system of ATRs and Couplers that form a load path to the foundation.

INTEGRATED BUILDING SOLUTIONS

SERVICES

Scale your business and outputs (take-offs, estimating, job quotes, and more) with the comfort of fixed overhead costs.

AUTOMATED SOLUTIONS

Optimize your entire prefabrication facilities workflow with off-site solutions that enable better on-site building.

SOFTWARE

Enhance your operational performance with software solutions that connect the entire supply chain.

ENGINEERED SYSTEMS & PRODUCTS

Accelerate your building process with a full range of advanced solutions that save on labor and installation costs.

MADE IN AMERICA. DESIGNED TO LAST.

Our structural connector products are designed to last and manufactured and distributed in 10 strategic locations in the United States.
